B.Tech. Computer Science and Engineering
(Artificial Intelligence and Machine Learning)

CURRICULUM AND SYLLABUS
(From 2022-23 Admitted Batches)

FULLY FLEXIBLE CHOICE BASED CREDIT SYSTEM (FFCBCS)

MOHAN BABU UNIVERSITY

Vision

To be a globally respected institution with an innovative and entrepreneurial culture that offers transformative education to advance sustainability and societal good.

Mission

- ❖ Develop industry-focused professionals with a global perspective.
- ❖ Offer academic programs that provide transformative learning experience founded on the spirit of curiosity, innovation, and integrity.
- ❖ Create confluence of research, innovation, and ideation to bring about sustainable and socially relevant enterprises.
- ❖ Uphold high standards of professional ethics leading to harmonious relationship with environment and society.

SCHOOL OF COMPUTING

Vision

To lead the advancement of computer science research and education that has real-world impact and to push the frontiers of innovation in the field.

Mission

- ❖ Instil within our students fundamental computing knowledge, a broad set of skills, and an inquisitive attitude to create innovative solutions to serve industry and community.
- ❖ Provide an experience par excellence with our state-of-the-art research, innovation, and incubation ecosystem to realize our learners' fullest potential.
- ❖ Impart continued education and research support to working professionals in the computing domain to enhance their expertise in the cutting-edge technologies.
- ❖ Inculcate among the computing engineers of tomorrow with a spirit to solve societal challenges.

DEPARTMENT OF ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING

Vision

To become a Centre of Excellence in Artificial Intelligence and Machine Learning by imparting high quality education through teaching, training and research

Mission

- ❖ To impart quality education in Computer Science and Engineering with specializations in Artificial Intelligence and Machine Learning by disseminating knowledge through contemporary curriculum, competent faculty and effective teaching-learning methodologies.
- ❖ Nurture research, innovation and entrepreneurial skills among students and faculty to contribute to the needs of industry and society.
- ❖ Inculcate professional attitude, ethical and social responsibilities for prospective and promising Engineering profession.
- ❖ Encourage students to engage in life-long learning by creating awareness of the contemporary developments in Computer Science and Engineering Artificial Intelligence and Machine Learning.

B.Tech. Computer Science and Engineering (Artificial Intelligence and Machine Learning)

PROGRAM EDUCATIONAL OBJECTIVES

After few years of graduation, the graduates of B.Tech.CSE (Artificial Intelligence and Machine Learning) will:

- PEO1.** Pursuing higher studies in core or allied areas of Computer Science, Artificial Intelligence, Machine Learning, Data Science or Management
- PEO2.** Employed in reputed Computer and I.T organizations or Government, to have a globally competent professional career in Computer Science and Engineering, Artificial Intelligence, Machine Learning, Data Science domain or be successful Entrepreneurs.
- PEO3.** Able to demonstrate effective communication, engage in teamwork, exhibit leadership skills, ethical attitude, and achieve professional advancement through continuing education.

PROGRAM OUTCOMES

On successful completion of the Program, the graduates of B.Tech. CSE (Artificial Intelligence and Machine Learning) Program will be able to:

- P01. Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- P02. Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- P03. Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- P04. Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- P05. Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

- P06. The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- P07. Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- P08. Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- P09. Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- P010. Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- P011. Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- P012. Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAM SPECIFIC OUTCOMES

On successful completion of the Program, the graduates of B.Tech. CSE (Artificial Intelligence and Machine Learning) program will be able to:

- PSO1.** Apply knowledge of computer science engineering, Use modern tools, techniques and technologies for efficient design and development of computer-based systems for complex engineering problems.
- PSO2.** Develop and apply Artificial Intelligence techniques to perform human intelligence tasks such as vision, language processing and speech recognition.
- PSO3.** Develop intelligent systems by applying Data Science, machine learning algorithms and techniques for solving problems from inter-disciplinary domains.
- PSO4.** Design and deploy networked systems using standards and principles, Apply suitable models, tools and techniques for secured information communication.

B.Tech. Computer Science and Engineering (Artificial Intelligence and Machine Learning)

Basket Wise - Credit Distribution **(Regular – 4 Years Program)**

S. No.	Basket	Credits (Min.- Max.)
1	SCHOOL CORE	50-56
2	PROGRAM CORE	45-61
3	PROGRAM ELECTIVE	12-18
4	SPECIALIZATION ELECTIVE	24-36
5	UNIVERSITY ELECTIVE	9-15
TOTAL CREDITS		Min. 160

Basket Wise - Credit Distribution **(Lateral Entry – 3 Years Program)**

S. No.	Basket	Credits (Min.- Max.)
1	SCHOOL CORE	20-36
2	PROGRAM CORE	45-61
3	PROGRAM ELECTIVE	12-18
4	SPECIALIZATION ELECTIVE	24-36
5	UNIVERSITY ELECTIVE	9-15
TOTAL CREDITS		Min. 120

School Core (50-56 Credits) - (Regular – 4 Years Program)

22AI102103	Deep Learning Architecture	3	-	2	-	4	Machine Learning using Python
22AI102104	Computational Linguistics and Natural Language Processing	3	-	2	-	4	Machine Learning using Python
22AI102105	Pattern Recognition and Anomaly Detection	3	-	2	-	4	-
22AI102106	Application of Machine Learning in Industries	3	-	2	-	4	Machine Learning using Python

Note:

1. If a student registered for IBM Collaborative Program, then they shall earn 24 Credits from the IBM Sub-Basket.
2. After completion of 24 credits from IBM Sub-Basket, if any student wish to take more Credits under Specialization Elective, then the student can choose the remaining credits from other knowledge areas of Specialization basket. The student is not eligible to opt equivalent courses while exercising this option.

Note:

1. If any student has chosen a course or equivalent course from the above list in their regular curriculum then, he/she is not eligible to opt the same course/s under University Elective.
2. The student can choose courses from other disciplines offered across the schools of MBU satisfying the pre-requisite other than the above list.

Course Code	Course Title	L	T	P	S	C
22MM102453	PHYSICS FOR COMPUTING	3	-	2	-	4
Pre-Requisite	-					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION: This course provides a detailed discussion and hands-on experience on wave optics, Quantum mechanics and its applications, Semiconductor diodes, optoelectronic devices, and Fiber optics.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Apply the concepts of light waves to interpret the concepts of Interference, Diffraction, and Polarization.
- CO2.** Demonstrate the basic knowledge of the quantum behaviour of matter in its microstate.
- CO3.** Analyze the band structure of solid materials using quantum physics.
- CO4.** Understand the basic concepts of semiconductors in the functioning of various optoelectronic devices.
- CO5.** Demonstrate the concepts of electromagnetic wave propagation in optical fibers.
- CO6.** Work independently and in teams to solve problems with effective communications.

Course Correlation Mapping	3	2	1	1	1	1	1	1	1	1	-	-

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1: WAVE OPTICS

(10 Periods)

Interference: Introduction - Interference in thin films (reflected light) - Newton's rings - Determination of wavelength.

Diffraction: Introduction - Fraunhofer diffraction - Single slit diffraction (qualitative) - Double slit diffraction (qualitative).

Polarization: Introduction - Polarization by reflection - and double refraction - Nicol's prism - Half wave and Quarter wave plate - Engineering applications of interference - diffraction and polarization.

Module 2: INTRODUCTION TO QUANTUM MECHANICS

(08 Periods)

Principles of Quantum Mechanics: Introduction - de Broglie's hypothesis for matter waves - Davison and Germer's experiment - Schrödinger's one dimensional wave equation (time independent) - significance of wave function - Fermi Dirac distribution and effect of temperature (qualitative treatment).

Module 3: QUANTUM PHYSICS AND BAND THEORY OF SOLIDS:

(08 Periods)

Applications of Quantum Physics: Particle in a 1 D box (Eigen Value and Eigen Function) - 3 D Analysis (Qualitative) - Tunnelling Effect (Qualitative) - Kronig Penney model (qualitative treatment) - origin of energy bands formation in solids.

Module 4: SEMICONDUCTORS AND OPTOELECTRONIC DEVICES

(11 Periods)

Introduction - Intrinsic semiconductors - Density of electrons in intrinsic semiconductor - Intrinsic carrier concentration - Fermi energy - Electrical conductivity of intrinsic semiconductors - Extrinsic semiconductors - Density of charge carriers in Extrinsic semiconductors (qualitative) - Drift and Diffusion currents - Direct and Indirect band gap semiconductors - Hall effect - pn junction

Optoelectronic devices: Light Emitting Diode (LED) - Photodiode - Semiconductor diode laser

Module 5: FIBER OPTICS

(08 Periods)

Introduction to fiber optics - Total Internal Reflection - Critical angle of propagation - Acceptance angle - Numerical Aperture - V number (qualitative) - Classification of fibers based on Refractive index profile, modes - Applications of optical fibers - Fiber optic Sensors (temperature, displacement).

Total Periods: 45

EXPERIENTIAL LEARNING

LIST OF EXPERIMENTS: (Minimum 10 experiments shall be conducted)

1. Estimation of the wavelength of the given laser by using a diffraction grating.
2. Predict the particle size using LASER by using the diffraction phenomenon.
3. Determine the thickness of thin wire using the wedge shape method.
4. Determination of the radius of curvature of the lens/wavelength of monochromatic source by using Newton's ring method
5. Find the numerical aperture of a given optical fiber and hence estimate its acceptance angle.
6. Calculate the number of charge carriers and Hall coefficients of a given semiconductor using the Hall Effect.
7. Find the forward and reverse resistance of a given p-n junction diode from its I-V

characteristics curves.

8. Predict the energy gap of a semiconductor by varying the temperatures.
9. Estimation of threshold voltages of different LEDs.
10. Study the characteristics of Photodiode and determine its dark current.
11. Estimation of the magnetic field along the axis of a circular coil carrying current with Stewart Gee's method.
12. Determination of wavelength of light by plane diffraction grating using spectrometer by minimum deviation method.

SCHOOL CORE

Course Code	Course Title	L	T	P	S	C
22EE102401	BASIC ELECTRICAL AND ELECTRONICS ENGINEERING	3	-	2	-	4

Pre-Requisite	-
Anti-Requisite	Fundamentals of Electrical Technology.
Co-Requisite	-

COURSE DESCRIPTION: This course is designed to provide an overview on the fundamentals of electrical and electrical engineering concepts and hands-on experience for non-electrical graduating students. The course address the fundamentals concepts of electrical circuits, operational aspects of motors, transformers and general electrical wiring systems. The course also emphasis on the illumination design, back-up supplies like UPS and Batteries, sensors and transducers, and principles of fundamental electronic devices and their applications.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Analyze the electrical circuits by applying the principles of electrical circuits.
- CO2.** Understand the operation of various motors used in domestic application, transformers and general wiring schemes.
- CO3.** Understand the operational aspects of UPS, batteries and design the appropriate lighting system for various industrial and domestic applications.
- CO4.** Understand the principle of various sensor and transducers to sense/measure various non-electrical parameters.
- CO5.** Understand the fundamentals of basic electronic devices, their characteristics and applications of electronic devices.
- CO6.** Work independently or in teams to solve problems with effective communication.

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1: FUNDAMENTALS OF ELECTRIC CIRCUITS

(10 Periods)

Classification of network elements; Voltage-Current relations for passive elements; Kirchhoff's laws; Series-Parallel connection; Mesh and Nodal analysis (With DC Independent Sources only).

AC sources—Single loop generator, Phasor representation, Voltage, Current, Impedance, Power factor and Apparent power.

Module 2: ELECTRICAL SYSTEMS

(09 Periods)

Motors: Types of motors, working principle and applications—DC motor, Three Phase Induction motor, Synchronous motor, Stepper motor.

Single Phase Transformer: Construction, principle of operation; EMF equation.

Electrical wiring: Methods of electrical wiring systems; Earthing procedure, Switch fuse unit (SFU), Operation of MCB and Relays.

Module 3: UTILIZATION OF ELECTRICAL SYSTEMS

(09 Periods)

Illumination: Light sources, Terminologies, Laws of illumination; Types of lamps, Lighting calculations; Interior Lighting - Industrial lighting; Exterior lighting- Street lighting and Flood lighting.

Uninterruptible Power Supply (UPS) - Components in UPS, Functionality and Calculation of ratings for UPS components to a specific load.

Emergency supply: Batteries -Types of batteries, Elementary calculations for energy consumption for a specified application.

Module 4: SENSORS AND TRANSDUCERS

(08 Periods)

Sensors- Light sensor, Voltage sensor, Temperature and Humidity sensor, Motion detection sensors, Wireless bluetooth sensors and Distance measurement with Ultrasound sensor.

Transducers -Basic requirements of transducers, Passive transducers - Strain gauge, Hall-Effect transducer, LVDT and Active transducers- Piezoelectric and Thermocouple, Data acquisition system (overview and concept only).

Module 5: FUNDAMENTALS OF ELECTRONICS ENGINEERING

(09 Periods)

Half wave and full wave rectifier, Zener diode, characteristics, application – Regulator. BJT—operation; Introduction to Operational amplifier: Inverting and non-inverting amplifier. Application—Adder, Comparator, Integrator and Differentiator; Analog to Digital Converters—Flash type and Successive approximation types; Digital to Analog converters—Weighed resistor and R-2R types.

Total Periods: 45

Topics for self-study are provided in the lesson plan.

EXPERIENTIAL LEARNING

LIST OF EXERCISES:

1. Verification of Kirchhoff's laws (Mesh and Nodal Analysis).
2. Performance evaluation by brake test on DC Shunt Motor.
3. Performance evaluation of a 1-Phase Transformer by Load test.
4. Practicing plate and pipe earthing system.
5. Operation and testing of Fuse, MCB and Relays.
6. Design and estimation of wiring for a typical house: One lamp controlled by one switch, Two lamp controlled by two switch and stair case wiring.
7. Calibration of LVDT for linear displacement measurement.
8. Analyze the characteristics of Resistance Temperature Detector (RTD) sensor.

9. Analyze the characteristics of piezoelectric sensor.
10. Investigate ripple factor and load regulations of rectifier with and without filters.
11. Design of inverting and non-inverting amplifiers using op-amp.
12. D-A converter (R-2R ladder) using Op-Amp 741 with required voltage levels.

COURSE DESCRIPTION: This course provides a detailed discussion and hands-on experience on C Programming concepts, Operators and Expressions, Input and Output Functions, Control Structures, Problem Solving Aspects, Arrays and Strings, Functions, Pointers, Structures and Unions, and File Handling.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Demonstrate knowledge on C programming constructs to develop programs.
- CO2.** Design algorithms using problem-solving techniques for given problems.
- CO3.** Apply functions and Arrays to enhance reusability and data manipulation.
- CO4.** Develop programs using pointers for efficient memory management.
- CO5.** Apply structures, unions and file handling concepts to develop societal applications.
- CO6.** Work independently or in team to solve problems with effective communications.

COURSE CONTENT

Module 1: INTRODUCTION TO C PROGRAMMING

(09 Periods)

Basics of C Programming: Introduction, Structure of a C program, Concept of a variable, Data types in C, Program statement, Declaration, Storing the data in memory, Tokens, Operators and expressions, Lvalues and Rvalues, Type conversion in C.

Input and Output: Basic screen and keyboard I/O in C, Non-formatted input and output, formatted input and output functions.

Module 2: CONTROL STATEMENTS AND INTRODUCTION TO PROBLEM SOLVING

(08 Periods)

Control Statements: Specifying test condition for selection and iteration, Writing test expression, Conditional execution and selection, Iteration and repetitive execution, goto statement, Special control statements, Nested loops.

Introduction to Problem Solving: Algorithms, Flowcharts, Problem solving aspect, Top-down design, Implementation of algorithms, program verification and efficiency of algorithms.

Module 3: ARRAYS & STRINGS AND FUNCTIONS

(10 Periods)

Arrays and Strings: One-dimensional array – Declaration, Initialization, Accessing elements, operations; Multi-dimensional arrays – Declaration, Initialization, Working with 2D arrays; Strings – Declaration, Initialization, Printing strings, String input, Character manipulation, String manipulation; Arrays of strings – Initialization, manipulating string arrays.

Functions: Concept of function, Using functions, Call by value mechanism, working with functions, passing arrays to functions, Scope and extent, Storage classes, Recursion.

Module 4: POINTERS

(08 Periods)

Introduction to Pointers: Understanding memory addresses, Address operator (&), Pointer – declaration, Initialization, Indirection operator and dereferencing, Void and Null pointers, Use of pointers, Arrays and pointers, Pointers and strings, Pointer arithmetic, Pointers to pointers, Array of pointers, Pointers to an array, Two-dimensional arrays and pointers, Pointers to functions, Dynamic memory allocation.

Module 5: USER-DEFINED DATA TYPES AND FILES

(10 Periods)

User-Defined Data Types: Structures - Declaration, Accessing the members, Initialization, typedef and its use, Arrays of structures, Arrays within structure, Structures and pointers, Structures and functions; Unions, Enumeration types, Bitfields.

Files: Using files in C, Working with text and binary files, Direct File Input and Output, Files of records, Random access to files of records.

Total Periods: 45

EXPERIENTIAL LEARNING

1. a) Write a C program to perform the arithmetic operations on two integer numbers.
b) Write a program to evaluate the following expressions by reading the necessary values from the keyboard.
 - i. $(ax + b)/(ax - b)$
 - ii. $2.5 \log x + \cos 32^\circ + |x^2 + y^2|$
 - iii. $ax^5 + bx^3 + c$
 - iv. ae^{kt}
2. a) Write a C program to find the roots of a quadratic equation.

- b) In a town, the percentage of men is 52. The percentage of total literacy is 48 and the total percentage of literate men is 35 of the total population. Write a C program to find the total number of illiterate men and women if the population of the town is 7000.
3. a) Write a C Program to compute an electricity bill based on the following slab rates.

Consumption units	Rate (in Rupees/unit)
0-100	4.0
101-150	4.6
151-200	5.2
201-300	6.3
Above 300	8.0

(**Hint:** Take current and old meter readings from the user to get consumption units)

- b) An insurance company computes the premium amount based on the following;
- If a person's health is excellent and the person is between 25 and 35 years of age and lives in a city, and is a male then the premium is Rs.4 per thousand and the policy amount cannot exceed Rs.2 lakhs.
 - If a person satisfies all the above conditions and is female then the premium is Rs.3 per thousand and the policy amount cannot exceed Rs.1 lakh.
 - If a person's health is poor and the person is between 25 and 35 years of age and lives in a village and is a male then premium is Rs.6 per thousand and the policy cannot exceed Rs. 10000.
 - In all other cases the person is not insured.

Write a C program to determine whether the person should be insured or not, his/her premium rate and maximum amount for which he/she can be insured.

- c) Write a C Program to find the grade for a student using a Switch case. The user needs to enter a subject score (varies from 0 to 100) and then display the grade as described below.

Score	Grade		Score	Grade
> = 90	O		>=50 to < 60	D
>=80 to < 90	A		>=40 to < 50	E
>=70 to < 80	B		< 40	Fail
>=60 to < 70	C			

4. a) A Fibonacci sequence is defined as follows:

The first and second terms in the sequence are 0 and 1. Sub-sequence terms are found by adding the preceding two terms in the sequence. Write a C program to generate the first n terms of the sequence.

- b) Write a C program to find the sum of individual digits of a positive integer.
- c) Write a C program to read two numbers x and n , and then compute the sum of the geometric progression: $1+x+x^2+x^3+\dots+x^n$. Show appropriate error message for $n<0$. (Example: if n is 3 and x is 5, then the sum is: $1+5+25+125$)
- d) Write a C program to print the following pattern.

				1				
			1	2	1			
		1	2	3	2	1		
	1	2	3	4	3	2	1	
1	2	3	4	5	4	3	2	1

5. a) Write a C program to find both the largest and smallest numbers in a list of integers.
- b) Write a C program that uses function to perform the following:
- Addition of Two Matrices
 - Multiplication of Two Matrices
6. a) Write a C program to insert a sub-string in to a main string at a given position.
- b) Write a C program to count the lines, words and characters in a given text.
7. a) Write a C program to generate all the prime numbers between 1 and n , where n is a value entered by the user. Define a separate function to generate prime numbers.
- b) Write C program that uses recursive function to find the following.
- Factorial of a given integer
 - GCD of two given integers
8. a) Write a C program to print the elements of an array in reverse order using pointers.
- b) Write a C program to count the number of vowels and consonants in a string using pointers.
- c) Write a C program to store n elements in an array and print the elements in sorted order using pointers.
9. a) Write a C program that performs the following operations:
- Reading a complex number
 - Writing a complex number
 - Addition of two complex numbers
 - Multiplication of two complex numbers
- (**Note:** Represent complex number using a structure.)
- b) Define a structure to store employee details include *Employee-Number*, *Employee-Name*, *Basic-pay*, *Date-of-Joining*. Write a C program for the following.

- i. A function to store 10 employee details.
 - ii. A function to implement the following rules while revising the basic pay.
 - If Basic-pay $\leq$ Rs.5000 then increase it by 15%.
 - If Basic-pay $>$ Rs.5000 and $\leq$ Rs.25000 then it increase by 10%.
 - If Basic-pay $>$ Rs.25000 then there is no change in Basic-pay.
 - iii. A function to print the details of employees who have completed 20 years of service from the Date-of-Joining.
- 10 a) Write a C program to reverse the first n characters of a given text file.
- b) Write a C program to merge two files into a new file.
- 11 Develop a phone book application to save users contact information include name, mobile number and email id as well as to edit and delete contact details.

COURSE DESCRIPTION: This course provides a comprehensive introduction to programming using the C language. It covers fundamental concepts including data types, control structures, arrays, strings, functions, and recursion. The curriculum explores pointers, dynamic memory allocation, structures, unions, and file handling techniques. Emphasis is placed on problem-solving and building efficient, modular C programs.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1. Demonstrate knowledge of C language fundamentals including data types, control structures, operators, and input/output operations.
- CO2. Apply decision-making and looping constructs to solve mathematical series problems and generate patterns using nested loops.
- CO3. Develop solutions using arrays, strings, functions, and recursion to address basic searching, sorting, and algorithmic problems.
- CO4. Utilize pointers and dynamic memory allocation techniques to manage memory and optimize program performance.
- CO5. Design structured programs using user-defined data types and implement file handling operations for persistent data storage.
- CO6. Work independently to solve problems with effective communication.

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1: INTRODUCTION TO C & BASIC CONCEPTS

(7 Periods)

History of C language, Structure of a C program, Header files, main() function, Compilation process, Data types: int, char, float, double; Type modifiers, Constants, Variables, Scope rules, Input/output operations: printf, scanf, getchar, putchar; Format specifiers. Operators: Arithmetic, relational, logical, bitwise, assignment, ternary; Operator precedence and associativity, Introduction of Debugging tools such as GDB and

online IDEs

Module 2: DECISION MAKING, LOOPING, SERIES & PATTERNS (10 Periods)

Decision making: if, if-else, nested if, switch-case; Looping constructs: for, while, do-while; Loop control statements: break, continue, goto; Mathematical series: Fibonacci, factorial, sum of digits, prime checking; Pattern printing: star patterns, number pyramids, hollow shapes, alphabet patterns; Nested loops, Flow control applications.

Module 3: ARRAYS, STRINGS AND FUNCTIONS (10 Periods)

One-dimensional arrays: declaration, initialization, traversal; Two-dimensional arrays: matrix input/output, addition, multiplication; Searching algorithms: linear, binary search; Sorting algorithms: bubble sort, selection sort; Strings: character arrays, pointers to characters, manual manipulation, common library functions; Functions: declaration, definition, calling, parameter passing by value and reference, return values; Recursion fundamentals: concept, base case, recursive calls; Recursive examples: factorial, Fibonacci, Tower of Hanoi

Module 4: POINTERS & DYNAMIC MEMORY ALLOCATION (10 Periods)

Pointers: declaration, initialization, dereferencing, pointer arithmetic; Pointers and arrays, Understanding memory addresses, Address operator (&), Pointer – declaration, Initialization, Indirection operator and dereferencing, Void and Null pointers, Use of pointers, Arrays and pointers, Pointers and strings, Pointer arithmetic, Pointers to pointers, Array of pointers, Pointers to an array, Two-dimensional arrays and pointers, Pointers to functions,

Dynamic memory allocation: malloc, calloc, realloc, free; Memory management pitfalls; Scope and storage classes: auto, static, extern, register;

Module 5: STRUCTURES, UNIONS & FILE HANDLING (8 Periods)

Structures: declaration, initialization, accessing members, nested structures, arrays and pointers to structures; Unions and enums, File handling basics: fopen, fclose, fprintf, fscanf, fgetc, fputc; Text and binary file modes, File pointers and navigation: fseek, ftell; Command-line arguments.

Total Periods: 45

EXPERIENTIAL LEARNING

LIST OF EXERCISES:

(All source code should be maintained and version-controlled on GitHub)

1) INTRODUCTION TO C & BASIC CONCEPTS

Leetcode: [#231. Power of Two](#)

Given an integer n , return *true* if it is a power of two. Otherwise, return *false*.

An integer n is a power of two, if there exists an integer x such that $n == 2^x$.

Example 1:

Input: $n = 1$

Output: true

Explanation: $2^0 = 1$

Example 2:

Input: $n = 16$

Output: true

Explanation: $2^4 = 16$

Example 3:

Input: $n = 3$

Output: false

Constraints:

- $-2^{31} \leq n \leq 2^{31} - 1$

✓ This problem helps students understand how binary systems work and how to efficiently determine powers of numbers using both mathematical and bitwise approaches

2) INTRODUCTION TO C & BASIC CONCEPTS

Leetcode: [#319. Bulb Switcher](#)

There are n bulbs that are initially off. You first turn on all the bulbs, then you turn off every second bulb.

On the third round, you toggle every third bulb (turning on if it's off or turning off if it's on).

For the i^{th} round, you toggle every i bulb. For the n^{th} round, you only toggle the last bulb.

Return the number of bulbs that are on after n rounds.

Example 1:

Input: $n = 3$

Output: 1

Explanation: At first, the three bulbs are [off, off, off].

After the first round, the three bulbs are [on, on, on].

After the second round, the three bulbs are [on, off, on].

After the third round, the three bulbs are [on, off, off].

So you should return 1 because there is only one bulb is on.

Example 2:

Input: $n = 0$

Output: 0

Example 3:

Input: $n = 1$

Output: 1

Constraints:

- $0 \leq n \leq 10^9$

✓ This problem helps students recognize mathematical patterns and optimize iterative logic through observation.

3) DECISION MAKING, LOOPING, SERIES & PATTERNS

Leetcode: [#9. Palindrome Number](#)

Given an integer x , return true if x is a **palindrome**, and false otherwise.

Example 1:

Input: $x = 121$

Output: true

Explanation: 121 reads as 121 from left to right and from right to left.

Example 2:

Input: $x = -121$

Output: false

Explanation: From left to right, it reads -121. From right to left, it becomes 121-.

Therefore it is not a palindrome.

Example 3:

Input: $x = 10$

Output: false

Explanation: Reads 01 from right to left. Therefore it is not a palindrome.

Constraints:

- $-2^{31} \leq x \leq 2^{31} - 1$

✓ This problem introduces students to basic numerical manipulation and edge case handling. It reinforces logic building by comparing number reversal techniques without converting to strings.

4) DECISION MAKING, LOOPING, SERIES & PATTERNS**Leetcode: [#172. Factorial Trailing Zeroes](#)**

Given an integer n , return *the number of trailing zeroes in $n!$* .

Note that $n! = n * (n - 1) * (n - 2) * \dots * 3 * 2 * 1$.

Example 1:

Input: $n = 3$

Output: 0

Explanation: $3! = 6$, no trailing zero.

Example 2:

Input: $n = 5$

Output: 1

Explanation: $5! = 120$, one trailing zero.

Example 3:

Input: $n = 0$

Output: 0

Constraints:

- $0 \leq n \leq 10^4$

✓ This problem helps students understand how trailing zeroes relate to factors of 10 in a factorial. It teaches efficient counting using division by powers of 5 instead of computing the full factorial. It strengthens mathematical intuition and optimization skills for combinatorics and number theory problems.

5) ARRAYS, STRINGS AND FUNCTIONS**Leetcode: [#1. Two Sum](#)**

Given an array of integers `nums` and an integer `target`, return *indices of the two numbers such that they add up to target*.

You may assume that each input would have **exactly one solution**, and you may not use the *same* element twice.

You can return the answer in any order.

Example 1:

Input: `nums = [2,7,11,15]`, `target = 9`

Output: `[0,1]`

Explanation: Because `nums[0] + nums[1] == 9`, we return `[0, 1]`.

Example 2:

Input: `nums = [3,2,4]`, `target = 6`

Output: `[1,2]`

Example 3:

Input: `nums = [3,3]`, `target = 6`

Output: `[0,1]`

Constraints:

- $2 \leq \text{nums.length} \leq 10^4$
- $-10^9 \leq \text{nums}[i] \leq 10^9$
- $-10^9 \leq \text{target} \leq 10^9$
- **Only one valid answer exists.**

✓ This problem builds foundational skills in array traversal and hash-based lookup optimization. It is a classic example for understanding time complexity trade-offs and real-time problem solving.

6) ARRAYS, STRINGS AND FUNCTIONS**Leetcode: [#58. Length of Last Word](#)**

Given a string `s` consisting of words and spaces, return *the length of the **last** word in the*

string.

A **word** is a maximal substring consisting of non-space characters only.

Example 1:

Input: s = "Hello World"

Output: 5

Explanation: The last word is "World" with length 5.

Example 2:

Input: s = " fly me to the moon "

Output: 4

Explanation: The last word is "moon" with length 4.

Example 3:

Input: s = "luffy is still joyboy"

Output: 6

Explanation: The last word is "joyboy" with length 6.

Constraints:

- $1 \leq s.length \leq 10^4$
- s consists of only English letters and spaces ' '.
- There will be at least one word in s.

✓ This problem improves string manipulation skills by focusing on trimming whitespace and identifying word boundaries. It helps learners understand edge cases involving trailing spaces and multiple separators. It lays the groundwork for efficient parsing techniques used in text processing and input sanitization.

7) POINTERS & DYNAMIC MEMORY ALLOCATION

Leetcode: [#832. Flipping an Image](#)

Given an n x n binary matrix image, flip the image **horizontally**, then invert it, and return *the resulting image*.

To flip an image horizontally means that each row of the image is reversed.

- For example, flipping [1,1,0] horizontally results in [0,1,1].

To invert an image means that each 0 is replaced by 1, and each 1 is replaced by 0.

- For example, inverting [0,1,1] results in [1,0,0].

Example 1:

Input: image = [[1,1,0],[1,0,1],[0,0,0]]

Output: [[1,0,0],[0,1,0],[1,1,1]]

Explanation: First reverse each row: [[0,1,1],[1,0,1],[0,0,0]].

Then, invert the image: [[1,0,0],[0,1,0],[1,1,1]]

Example 2:

Input: image = [[1,1,0,0],[1,0,0,1],[0,1,1,1],[1,0,1,0]]

Output: [[1,1,0,0],[0,1,1,0],[0,0,0,1],[1,0,1,0]]

Explanation: First reverse each row: [[0,0,1,1],[1,0,0,1],[1,1,1,0],[0,1,0,1]].

Then invert the image: [[1,1,0,0],[0,1,1,0],[0,0,0,1],[1,0,1,0]]

Constraints:

- $n == image.length$
- $n == image[i].length$
- $1 \leq n \leq 20$
- $image[i][j]$ is either 0 or 1.

✓ This problem enhances understanding of 2D matrix manipulation through row-wise reversal and bitwise inversion. It develops skills in nested iteration, in-place transformation, and binary operations. It lays the foundation for advanced image processing algorithms and real-world visual data handling.

8) POINTERS & DYNAMIC MEMORY ALLOCATION

Leetcode: [#345. Reverse Vowels of a String](#)

Given a string s, reverse only all the vowels in the string and return it.

The vowels are 'a', 'e', 'i', 'o', and 'u', and they can appear in both lower and upper cases, more than once.

Example 1:

Input: s = "IceCreAm"

Output: "AceCreIm"

Explanation:

The vowels in s are ['I', 'e', 'e', 'A']. On reversing the vowels, s becomes "AceCreIm".

Example 2:

Input: s = "leetcode"

Output: "leotcede"

Constraints:

- $1 \leq s.length \leq 3 * 10^5$
- s consist of **printable ASCII** characters.

✓ This problem strengthens the understanding of two-pointer techniques in string manipulation. It reinforces the concept of character classification and conditional swapping based on criteria (vowels in this case).

9) **STRUCTURES, UNIONS & FILE HANDLING**

Student Record Management System (Text File Based)

A simple system to manage student records using a .txt file. The user can:

- Add a student
- View all students
- Search by roll number
- Delete a record
-

Concepts Used:

- File creation and appending
- Reading and searching in files
- Overwriting file content

Sample Menu:

1. Add Student
2. View All Students
3. Search Student by Roll Number
4. Delete Student by Roll Number
5. Exit

File Format:

Each line in the file (e.g., students.txt) stores a record like:

101, John Doe, Computer Science
102, Jane Smith, Electronics

✓ Gain hands-on experience with file handling operations like read, write, append, and delete using C

10) **STRUCTURES, UNIONS & FILE HANDLING**

Simple Expense Tracker

Description:

An expense tracker that allows users to log their daily expenses and retrieve summaries.

Concepts Used:

- Writing data to files with timestamps
- Reading and parsing files
- Date-based filtering

Features:

- Add an expense (amount, description, category)
- View all expenses
- View total spent
- Filter by category or date

File Format (expenses.txt):

2025-06-25, 150, Food, Lunch
 2025-06-25, 300, Travel, Auto to Office
 2025-06-26, 100, Food, Tea and Snacks

Sample Menu:

1. Add Expense
2. View All Expenses
3. Total Amount Spent
4. View Expenses by Category
5. Exit

✓ Learners will gain hands-on experience in reading, writing, and managing structured data using Python file handling. They will also learn to organize and analyze daily expense records using functions, control flow, and date-based filtering.

SCHOOL CORE

Course Code	Course Title	L	T	P	S	C
22CS102032	PROBLEM SOLVING THROUGH JAVA	3	-	2	-	4
Pre-Requisite	-					
Anti-Requisite	Object Oriented Programming Through Java					
Co-Requisite	-					

COURSE DESCRIPTION: This course introduces object-oriented programming using Java. It covers Java fundamentals, including platform independence, data types, control structures, and the principles of object-oriented programming. The course also explores the Java Collection Framework to develop efficient and reusable code using lists, sets, and maps.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1. Demonstrate** knowledge of Java fundamentals, including OOP principles, JVM architecture, data types, control structures, and program structure.
- CO2. Apply** concepts of classes, objects, constructors, method overloading, and access control to develop modular and reusable Java programs.
- CO3. Develop** object-oriented applications using inheritance, interfaces, abstract classes, and packages to promote code extensibility and reusability.
- CO4. Design reliable solutions using exception handling and multithreading techniques to build robust and concurrent Java applications.**
- CO5. Utilize** the Java Collection Framework and file handling APIs to store, manipulate, and persist data efficiently in real-world applications.
- CO6. Work independently to solve problems with effective communication.**

CO-PO-PSO Mapping Table:

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1: INTRODUCTION TO JAVA AND OOPS FUNDAMENTALS (12 Periods)

Features of Java, Platform independence, JVM, JRE, JDK, Bytecode, Java program structure, OOP principles, Data types, Variables, Scope and life time of variables, Operators, Control statements, Type conversion and casting, Arrays. Concepts Of Classes And Objects: Introducing methods, Method overloading, Constructors, Constructor overloading, Usage of static with data and method, Access control, this key word, Garbage collection, String class, StringTokenizer, Introduction of Debugging tools such as GDB and online IDEs

Module 2: INHERITANCE, INTERFACE AND PACKAGES (9 Periods)

Inheritance basics, Types of inheritance, Member access rules, Usage of super key word, Method

overriding, Usage of final, Abstract classes, Interfaces - differences between abstract classes and interfaces, defining an interface, implementing interface, applying interfaces, variables in interface and extending interfaces; Packages - defining, creating and accessing a package, importing packages, access control in packages.

Module 4: EXCEPTION HANDLING AND MULTITHREADING (8 Periods)

Exception Handling: Concepts of exception handling, Types of exceptions, Usage of try, catch, throw, throws and finally keywords, Built-in exceptions, Creating user defined exception; Multithreading: Concepts of multithreading, Differences between process and thread, Thread life cycle, Creating multiple threads using Thread class and Runnable interface, Synchronization, Thread priorities, Inter thread communication.

Module 3: COLLECTION FRAMEWORK (8 Periods)

Collection Framework: Collections Overview, Collection Interfaces - List, Set, Map, List - ArrayList, Linked List, Vector, Set - HashSet, TreeSet, Map - Hashtable, HashMap, Accessing a collection via an Iterator, comparator, comparable.

Module 5: FILE HANDLING IN JAVA (8 Periods)

Java IO classes and packages, Byte streams vs character streams, Reading with FileReader, BufferedReader, Scanner, Writing with FileWriter, BufferedWriter, Handling IOExceptions, Try-with-resources, File class for existence check, Creating, Deleting, Listing files and directories.

Total Periods: 45

EXPERIENTIAL LEARNING

LIST OF EXERCISES:

(All source code should be maintained and version-controlled on GitHub)

1) INTRODUCTION TO JAVA AND OOPS FUNDAMENTALS

Leetcode: [#342. Power of Four](#)

Given an integer n , return *true* if it is a power of four. Otherwise, return *false*.

An integer n is a power of four, if there exists an integer x such that $n == 4^x$.

Example 1:

Input: $n = 16$

Output: true

Example 2:

Input: $n = 5$

Output: false

Example 3:

Input: $n = 1$

Output: true

Constraints:

- $-2^{31} \leq n \leq 2^{31} - 1$

✓ This problem enhances mathematical reasoning by exploring the concept of exponential patterns specific to base 4. It helps learners distinguish between powers of 2 and powers of 4 using both mathematical checks and bitwise operations.

2) INTRODUCTION TO JAVA AND OOPS FUNDAMENTALS

Leetcode: [#258. Add Digits](#)

Given an integer num, repeatedly add all its digits until the result has only one digit, and return it.

Example 1:

Input: num = 38

Output: 2

Explanation: The process is

38 --> 3 + 8 --> 11

11 --> 1 + 1 --> 2

Since 2 has only one digit, return it.

Example 2:

Input: num = 0

Output: 0

Constraints:

- $0 \leq \text{num} \leq 2^{31} - 1$

✓ This problem strengthens understanding of digit manipulation and recursive logic. It introduces students to mathematical optimization using the concept of digital root. Such problems improve reasoning for numerical pattern questions often seen in coding interviews.

3) **INHERITANCE, INTERFACE AND PACKAGES**

The university wants to maintain basic details of students along with specific information about graduate students. The base class, Student, holds general information about all students, while the derived class GraduateStudent adds specific information relevant to graduate students.

Program Specifications:

- **Create a class named Student** to store general student information:
 - String name: Name of the student.
 - int id: Student ID number.
 - String department: Department of the student.
 - Include a method named displayStudentInfo() to print the student's general information.
- **Create a class named GraduateStudent** that extends Student with an additional attribute:
 - String thesisTopic: The topic of the thesis for graduate students.
 - Include a method named displayThesisTopic() to print the graduate student's thesis topic.
- **Create a Main class** to capture user input for a graduate student, including their thesis topic, and display their details.

Input Format:

1. First, the user is prompted to enter the student's name (String).
2. Next, the user is asked to enter the student ID (Integer).
3. The user is prompted to enter the student's department (String).
4. Finally, the user is asked to enter the thesis topic of the graduate student (String).

Output Format:

- The output should display the student's general details first, followed by the thesis topic.
- Each label and its corresponding value should be separated by a colon (:) and a space.
- The output should print on separate lines.

Sample Input:

Enter the student's name:

Alice Johnson

Enter the student ID:

12345

Enter the student's department:

Computer Science

Enter the thesis topic:

Machine Learning in Healthcare

Sample Output:

Student Details:

Name: Alice Johnson

ID: 12345

Department: Computer Science

Thesis Topic: Machine Learning in Healthcare

4) **INHERITANCE, INTERFACE AND PACKAGES**

The cricket association wants to classify players based on their general profile, then further categorize them as either bowlers or specific types of fast bowlers. This classification helps manage player details at different levels of expertise.

This system will use **multilevel inheritance**:

1. The Player class will store basic details about any player.
2. The Bowler class will extend Player to add attributes specific to bowlers.
3. The FastBowler class will extend Bowler to add details unique to fast bowlers.

Program Specifications:

- **Create a Player class** with the following attributes:
 - String name: Name of the player.
 - String team: Team of the player.
 - int age: Age of the player.
 - Include a method displayPlayerInfo() to print general player information.
- **Create a Bowler class** extending Player with additional attributes:
 - int wicketsTaken: Number of wickets taken by the bowler.
 - double bowlingAverage: The bowling average of the bowler.
 - Include a method displayBowlerInfo() to print bowler-specific details.
- **Create a FastBowler class** extending Bowler with an additional attribute:
 - int averageSpeed: Average bowling speed (km/h).
 - Include a method displayFastBowlerInfo() to print fast bowler-specific details.
- **Create a Main class** to capture user input and display player details at each level of inheritance.

Input Format:

1. First, the user is prompted to enter the player's name.
2. Next, the player's team name.
3. Player's age.
4. Number of wickets taken.
5. Bowling average.
6. Average speed of bowling.

Output Format:

- The output should display the player's general details first, followed by bowler-specific details, and finally the fast bowler-specific details.

Sample Input:

Enter the player's name:
Jasprit Bumrah
Enter the player's team:
India
Enter the player's age:
29
Enter the number of wickets taken:
300
Enter the bowling average:
24.5
Enter the average speed:
140

Sample Output:

Player Details:
Name: Jasprit Bumrah
Team: India
Age: 29
Bowler Details:
Wickets Taken: 300
Bowling Average: 24.5
Fast Bowler Details:
Average Speed: 140 km/h

5) **EXCEPTION HANDLING AND MULTITHREADING**

ShopEasy, an online retailer, uses a simple internal application to calculate the price per item for each order. The application calculates the price per item by dividing the total price by the number of items ordered. During testing, the application encountered issues when the number of items ordered was zero, resulting in an ArithmeticException. To avoid application crashes and provide a smooth user experience, ShopEasy needs a solution that

handles this exception gracefully.

Write a Java program to help ShopEasy's team safely calculate the price per item. The program should:

1. Prompt the user to enter the total price of the items.
2. Prompt the user to enter the number of items.
3. Display the price per item by dividing the total price by the number of items.
4. If the number of items is zero, catch the `ArithmeticException` and display the message: Error: Number of items cannot be zero. Please enter a valid quantity.
5. Allow the user to re-enter the number of items if they initially entered zero.

Input Format

- Total price of items (integer or decimal).
- Number of items (integer).

Output Format

- Display price per item if calculated successfully.
- Display an error message if an `ArithmeticException` is encountered and prompt the user to enter a valid quantity.

Example 1

Sample Input 1:

Enter the total price of the items: 150

Enter the number of items: 0

Sample Output 1:

Error: Number of items cannot be zero. Please enter a valid quantity.

Enter the number of items: 5

Price per item: 30.0

Explanation: The user initially entered 0 for the number of items, which would cause a division by zero error. The program catches this exception and prompts the user to re-enter a valid quantity. After entering 5, the program calculates $150 / 5 = 30.0$ and displays the result.

Example 2

Sample Input 2:

Enter the total price of the items: 200

Enter the number of items: 4

Sample Output 2:

Price per item: 50.0

Explanation: In this case, the user entered a valid number of items, so the program calculates $200 / 4 = 50.0$ without encountering any errors.

6) **EXCEPTION HANDLING AND MULTITHREADING**

Sam wants to create a simple budget planner to manage monthly expenses. The planner will take inputs for the estimated monthly income and expected expenses. Sam may occasionally enter non-numeric values by mistake, which would cause a `NumberFormatException`. To handle this, Sam's budget planner needs to catch this exception, inform the user of the error, and prompt them to enter a valid number.

Problem Statement: Write a Java program that:

1. Prompts the user to enter the estimated monthly income and expected monthly expenses.
2. Calculates and displays the remaining balance by subtracting expenses from income.
3. If the user enters a non-numeric value for income or expenses, handle the `NumberFormatException` and display an error message: Error: Please enter a valid numeric value.
4. Re-prompt the user to enter valid values until they are correct.

Input Format

- Monthly income (string that should be convertible to a double).
- Monthly expenses (string that should be convertible to a double).

Output Format

- If both inputs are valid numbers, display the remaining balance after subtracting expenses from income.
- If an input is invalid, display an error message and re-prompt the user for

valid input.

Example 1

Sample Input 1:

Enter your estimated monthly income: 5000

Enter your expected monthly expenses: 2000

Sample Output 1:

Remaining balance: ₹3000.00

Explanation:

The user entered valid numbers for income and expenses. The remaining balance is calculated as $5000 - 2000 = 3000.00$.

Example 2

Sample Input 2:

Enter your estimated monthly income: 4000

Enter your expected monthly expenses: two thousand

Sample Output 2:

Error: Please enter a valid numeric value.

Enter your expected monthly expenses: 2500

Remaining balance: ₹1500.00

Explanation:

The user initially entered a non-numeric value for expenses. The program catches the `NumberFormatException`, displays an error message, and prompts the user to enter a valid number for expenses. After re-entering 2500, the program calculates the remaining balance as $4000 - 2500 = 1500.00$.

7) **COLLECTION FRAMEWORK**

Leetcode: #434. Number of Segments in a String

Given a string *s*, return *the number of segments in the string*.

A **segment** is defined to be a contiguous sequence of **non-space characters**.

Example 1:

Input: *s* = "Hello, my name is John"

Output: 5

Explanation: The five segments are ["Hello,", "my", "name", "is", "John"]

Example 2:

Input: *s* = "Hello"

Output: 1

Constraints:

- $0 \leq s.length \leq 300$
- *s* consists of lowercase and uppercase English letters, digits, or one of the following characters " ! @ # \$ % ^ & * () _ + - = ' , . : " .
- The only space character in *s* is ' ' .

✓ This problem enhances skills in string parsing and manipulation by focusing on identifying word boundaries. It helps learners handle edge cases involving multiple spaces and special characters. It builds a foundation for text processing tasks like tokenization and input validation.

8) **COLLECTION FRAMEWORK**

Leetcode: #509. Fibonacci Number

The **Fibonacci numbers**, commonly denoted $F(n)$ form a sequence, called the **Fibonacci sequence**, such that each number is the sum of the two preceding ones, starting from 0 and 1. That is,

$F(0) = 0, F(1) = 1$

$F(n) = F(n - 1) + F(n - 2)$, for $n > 1$.

Given *n*, calculate $F(n)$.

Example 1:

Input: *n* = 2

Output: 1

Explanation: $F(2) = F(1) + F(0) = 1 + 0 = 1$.

Example 2:

Input: *n* = 3

Output: 2

Explanation: $F(3) = F(2) + F(1) = 1 + 1 = 2$.

Example 3:

Input: $n = 4$

Output: 3

Explanation: $F(4) = F(3) + F(2) = 2 + 1 = 3$.

Constraints:

- $0 \leq n \leq 30$

✓ This problem strengthens understanding of recursion and iterative problem solving through the Fibonacci sequence.

It helps learners practice dynamic programming techniques to optimize repeated calculations.

9) FILE HANDLING IN JAVA

Contact Book System

Description:

Create a simple Contact Book where users can add, view, search, and delete contacts stored in a text file. Each contact will include a name, phone number, and email.

File Format: contacts.txt

John Doe,9876543210,john@example.com

Jane Smith,9123456789,jane@example.com

✓ Learners will understand how to create, read, write, and update data in a text file using Java I/O streams. They will also learn how to parse structured text data and implement basic search functionality.

10) FILE HANDLING IN JAVA

Student Marks Analyzer

Description:

Develop a tool to store student names and marks in a file, calculate average marks, and identify top scorers.

File Format: marks.txt

CopyEdit

Alice,88

Bob,92

Charlie,79

✓ Learners will practice reading structured data from files and performing computations like average and maximum. They will gain skills in file parsing, string manipulation, and data aggregation using Java.

RESOURCES

TEXT BOOKS:

1. Herbert Schildt, *Java: The Complete Reference*, 11th Edition, McGraw-Hill Education, 2019.

SCHOOL CORE

Course Code	Course Title	L	T	P	S	C
22CS105002	PROGRAMMING ESSENTIALS USING C++	-	1	2	-	2
Pre-Requisite	-					
Anti-Requisite	Object Oriented Programming through C++					
Co-Requisite	-					

COURSE DESCRIPTION: This course provides a comprehensive introduction to C++ programming, covering core concepts such as program structure, data types, operators, and control statements. The course also explores user-defined data types including structures, unions, and classes, emphasizing object-oriented programming principles like encapsulation, constructors, and destructors for effective software development.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** demonstrate proficiency in C++ basics including program structure, control flow, arrays, and string operations.
- CO2.** Apply functions, recursion, and pointers to create modular and efficient programs.
- CO3.** Apply object-oriented programming concepts like encapsulation, abstraction, inheritance, polymorphism, overloading, and exception handling to build robust and reusable C++ applications.
- CO4.** Work independently to solve problems with effective communication.

CO-PO-PSO Mapping Table:

Course Outcomes	Program Outcomes												Program Specific Outcomes			
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3	PSO4

Correlation Levels: 3: High; 2: Medium; 1: Low

EXPERIENTIAL LEARNING

(All source code should be maintained and version-controlled on GitHub)

Introduction to C++, features, structure of a C++ program, input/output using cin, cout, and manipulators, operators: arithmetic, relational, logical, bitwise, assignment, conditional, control structures: if, if-else, switch, loops: for, while, do-while; arrays: 1D and 2D declaration, initialization, traversal, strings using character arrays and std::string, basic operations.

1) Leetcode: [#171. Excel Sheet Column Number](#)

Given a string columnTitle that represents the column title as appears in an Excel sheet, return *its corresponding column number*.

For example:

A -> 1

B -> 2

C -> 3

...

Z -> 26

AA -> 27

AB -> 28

...

Example 1:

Input: columnTitle = "A"

Output: 1

Example 2:

Input: columnTitle = "AB"

Output: 28

Example 3:

Input: columnTitle = "ZY"

Output: 701

Constraints:

- $1 \leq \text{columnTitle.length} \leq 7$
- columnTitle consists only of uppercase English letters.
- columnTitle is in the range ["A", "FXSHRXW"].

2) Leetcode: [#1523. Count Odd Numbers in an Interval Range](#)

Given two non-negative integers low and high. Return the *count of odd numbers between low and high (inclusive)*.

Example 1:

Input: low = 3, high = 7

Output: 3

Explanation: The odd numbers between 3 and 7 are [3,5,7].

Example 2:

Input: low = 8, high = 10

Output: 1

Explanation: The odd numbers between 8 and 10 are [9].

Constraints:

- $0 \leq \text{low} \leq \text{high} \leq 10^9$

3) Leetcode: [**#1456. Maximum Number of Vowels in a Substring of Given Length**](#)

Given a string *s* and an integer *k*, return *the maximum number of vowel letters in any substring of s with length k*.

Vowel letters in English are 'a', 'e', 'i', 'o', and 'u'.

Example 1:

Input: *s* = "abciidef", *k* = 3

Output: 3

Explanation: The substring "iii" contains 3 vowel letters.

Example 2:

Input: *s* = "aeiou", *k* = 2

Output: 2

Explanation: Any substring of length 2 contains 2 vowels.

Example 3:

Input: *s* = "leetcode", *k* = 3

Output: 2

Explanation: "lee", "eet" and "ode" contain 2 vowels.

Constraints:

- $1 \leq s.length \leq 10^5$
- *s* consists of lowercase English letters.
- $1 \leq k \leq s.length$

4) Leetcode: [**#762. Prime Number of Set Bits in Binary Representation**](#)

Given two integers *left* and *right*, return *the count of numbers in the inclusive range [left, right] having a prime number of set bits in their binary representation*.

Recall that the **number of set bits** an integer has is the number of 1's present when written in binary.

- For example, 21 written in binary is 10101, which has 3 set bits.

Example 1:

Input: *left* = 6, *right* = 10

Output: 4

Explanation:

6 -> 110 (2 set bits, 2 is prime)

7 -> 111 (3 set bits, 3 is prime)

8 -> 1000 (1 set bit, 1 is not prime)

9 -> 1001 (2 set bits, 2 is prime)

10 -> 1010 (2 set bits, 2 is prime)

4 numbers have a prime number of set bits.

Example 2:

Input: *left* = 10, *right* = 15

Output: 5

Explanation:

10 -> 1010 (2 set bits, 2 is prime)

11 -> 1011 (3 set bits, 3 is prime)

12 -> 1100 (2 set bits, 2 is prime)

13 -> 1101 (3 set bits, 3 is prime)

14 -> 1110 (3 set bits, 3 is prime)

15 -> 1111 (4 set bits, 4 is not prime)

5 numbers have a prime number of set bits.

Constraints:

- $1 \leq left \leq right \leq 10^6$
- $0 \leq right - left \leq 10^4$

Function declaration, definition, calling, parameter passing, default arguments,

recursion: concept, base case, examples like factorial and Fibonacci, pointers: declaration, dereferencing, arithmetic, pointers with arrays and functions, structures: definition, nested structures, arrays of structures, unions and differences from structures, memory sharing concepts. Defining classes and creating objects, member variables and functions, access specifiers: public, private, protected, constructors and destructors: default and parameterized

5) Leetcode: [# 50. Pow\(x, n\)](#)

Implement [pow\(x, n\)](#), which calculates x raised to the power n (i.e., x^n).

Example 1:

Input: x = 2.00000, n = 10

Output: 1024.00000

Example 2:

Input: x = 2.10000, n = 3

Output: 9.26100

Example 3:

Input: x = 2.00000, n = -2

Output: 0.25000

Explanation: $2^{-2} = 1/2^2 = 1/4 = 0.25$

Constraints:

- $-100.0 < x < 100.0$
- $-2^{31} \leq n \leq 2^{31}-1$
- n is an integer.
- Either x is not zero or $n > 0$.
- $-10^4 \leq x^n \leq 10^4$

6) Leetcode: [# 509. Fibonacci Number](#)

The **Fibonacci numbers**, commonly denoted $F(n)$ form a sequence, called the **Fibonacci sequence**, such that each number is the sum of the two preceding ones, starting from 0 and 1. That is,

$F(0) = 0$, $F(1) = 1$

$F(n) = F(n - 1) + F(n - 2)$, for $n > 1$.

Given n, calculate $F(n)$.

Example 1:

Input: n = 2

Output: 1

Explanation: $F(2) = F(1) + F(0) = 1 + 0 = 1$.

Example 2:

Input: n = 3

Output: 2

Explanation: $F(3) = F(2) + F(1) = 1 + 1 = 2$.

Example 3:

Input: n = 4

Output: 3

Explanation: $F(4) = F(3) + F(2) = 2 + 1 = 3$.

Constraints:

- $0 \leq n \leq 30$

7) Class and Objects

Imagine you're tasked with developing a Sports Event Venue Management System for a sports event organization. The company is responsible for organizing major sporting events like cricket, football, and other tournaments at different stadiums across the country. Each venue where the events take place needs to be stored in the system with details such as the venue's name and the city where it is located.

The system should be simple to use, allowing the event organizers to input venue information

and retrieve the stored details to ensure proper event planning and logistics.

Program Specifications

1. Create a class named Venue to store details about a venue, such as the venue name and city.
2. Create a Main class to capture user input and display the venue's information in a structured format.
3. Adhere strictly to object-oriented principles and use default access for member variables.

Input Format

1. First, the user is prompted to enter the venue name (String).
2. Next, the user is asked to input the city name (String).

Constraints

NA

Output Format

- The output should display the details of the venue in a structured format, with each piece of information labeled (Venue Name, City Name).
- Each label and its corresponding value should be separated by a colon (:) and a space.
- The output should be printed on separate lines.

Sample Input 0

M. A. Chidambaram Stadium
Chennai

Sample Output 0

Enter the venue name
Enter the city name
Venue Details
Venue Name : M. A. Chidambaram Stadium
City Name : Chennai
M. A. Chidambaram Stadium

Sample Input 1

Wankhede Stadium
Mumbai

Sample Output 1

Enter the venue name
Enter the city name
Venue Details
Venue Name : Wankhede Stadium
City Name : Mumbai
Wankhede Stadium

Encapsulation through data hiding and access control, abstraction: defining essential features, separating interface from implementation, Types of inheritance: single, multiple, multilevel, hierarchical, hybrid, base and derived classes, constructor invocation order, function overriding and virtual functions, runtime polymorphism, operator overloading basics and function overloading, exception handling using try, catch, throw, custom exceptions.

8) Encapsulation

A cricket team management system needs to store and manage player information. The details include each player's name, age, role (e.g., Batsman, Bowler, All-Rounder), total matches played, and total runs scored. The management team wants a system where they can add player statistics, view player details, and securely manage sensitive player data by preventing direct access to the player's attributes.

Program Specifications

- **Create a class named CricketPlayer:**
 - **Attributes (Private):**

- String name: Stores the player's name.
- int age: Stores the player's age.
- String role: Stores the player's role (e.g., Batsman, Bowler, All-Rounder).
- int matchesPlayed: Stores the total number of matches played by the player.
- int runsScored: Stores the total runs scored by the player.
- **Constructors:**
 - **Parameterized Constructor:** Initializes all attributes when a new player is created.
- **Methods:**
 - public String getName(): Returns the player's name.
 - public int getAge(): Returns the player's age.
 - public String getRole(): Returns the player's role.
 - public int getMatchesPlayed(): Returns the number of matches played.
 - public int getRunsScored(): Returns the runs scored by the player.
 - public void addRuns(int runs): Adds runs to the player's total (if runs is positive).
 - public void addMatches(int matches): Increases matches played (if matches is positive).
 - public void displayPlayerDetails(): Displays the player's information in a structured format.
- **Create a class named Main:**
 - **Purpose:** Captures user input to create a CricketPlayer object, allows the addition of runs and matches, and displays the player's details.
 -

Input Format:

- The program should prompt the user to enter the following details:
1. Player's Name (String).
 2. Player's Age (int).
 3. Player's Role (String).
 4. Matches Played (int).
 5. Runs Scored (int).

Output Format:

- Displays the player details as well as the updated statistics after adding runs or matches.
- The format should be:

Player Details:

Name: [name]

Age: [age]

Role: [role]

Matches Played: [matchesPlayed]

Runs Scored: [runsScored]

- If an invalid action is attempted (e.g., negative runs/matches), display:

Invalid Input

Example 1

Sample Input 1

Enter the player's name:

Virat Kohli

Enter the player's age:

34

Enter the player's role:

Batsman

Enter matches played:

200

Enter runs scored:

10000

Enter runs to add:

150

Enter matches to add:

1

Sample Output 1

Player Details:

Name: Virat Kohli

Age: 34

Role: Batsman

Matches Played: 201

Runs Scored: 10150

9) Inheritance

The cricket association wants to keep track of both general player details and specific details about bowlers. The base class, *Player*, will store general information about all cricket players, while the derived class, *Bowler*, will add details specific to bowlers.

Program Specifications:

- **Create a class named *Player*** to store general cricket player information:
 - String name: Name of the player.
 - String team: Team of the player.
 - int age: Age of the player.
 - Include a method named `displayPlayerInfo()` to print the player's general information.
- **Create a class named *Bowler*** that extends *Player* with additional attributes:
 - int wicketsTaken: Number of wickets taken by the bowler.
 - double bowlingAverage: The bowling average of the bowler.
 - Include a method named `displayBowlingStats()` to print the bowler's specific statistics.
- **Create a Main class** to capture user input for a bowler and display their details.

Input Format:

1. First, the user is prompted to enter the player's name (String).
2. Next, the user is asked to enter the player's team (String).
3. The user is prompted to enter the player's age (Integer).

4. Then, the user is asked to enter the number of wickets taken (Integer).
5. Finally, the user is asked to enter the bowling average (Double).

Output Format:

- The output should display the player's general details first, followed by the bowling statistics.
- Each label and its corresponding value should be separated by a colon (:) and a space.
- The output should print each detail on a new line.

Sample Input:

Enter the player's name:
 Jasprit Bumrah
 Enter the player's team:
 India
 Enter the player's age:
 29
 Enter the number of wickets taken:
 300
 Enter the bowling average:
 24.5

Sample Output:

Player Details:
 Name: Jasprit Bumrah
 Team: India
 Age: 29
 Bowling Statistics:
 Wickets Taken: 300
 Bowling Average: 24.5

In this scenario, we will develop a **Cricket Match Delivery Tracking System** that allows users to log and display details about specific deliveries during a cricket match. The system will utilize **method overloading** to handle different aspects of a delivery, such as player details (bowler and batsman) and run details.

Program Specifications

Class: Delivery

- **Methods:**
 - void displayDeliveryDetails(String bowler, String batsman): Displays the last names of the bowler and batsman for a particular delivery.
 - void displayDeliveryDetails(Long runs): Displays run details for that delivery and indicates if it's a boundary or a six based on the runs scored.

Class: Main

- **Methods:**
 - public static void main(String[] args): Contains the menu-driven interface to test the Delivery class.

Input Format:

- The user can choose to log player details (bowler and batsman) or run details.
- The user inputs names and run values as specified.

Output Format:

- The system will display the last names of the bowler and batsman or the run details based on user input.

Example 1

Sample Input 1

Menu

1. Player details of the delivery
2. Run details of the delivery
3. Exit

Enter your choice: 1

Enter the bowler name: Ravichandran Ashwin

Enter the batsman name: Virat Kohli

Sample Output 1

Player details of the delivery:

Bowler: Ashwin

Batsman: Kohli

Course Code	Course Title	L	T	P	S	C
22AI105001	DESIGN THINKING	-	1	2	-	2

Pre-Requisite -

Anti-Requisite -

Co-Requisite -

COURSE DESCRIPTION: This course provides a detailed discussion and hands-on experience on design thinking process, evaluation of requirement specification and reflections on design experience. This course also focuses on demonstration of five phases of design thinking such as empathize, define, ideate, prototyping, testing and validation with design thinking tools and frameworks.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Investigate the requirements of a problem by conducting surveys.
- CO2.** Create meaningful and actionable problem statements for creative problem solving.
- CO3.** Construct blueprints to visualize user attitudes and behavior for gaining insights of customers.
- CO4.** Design prototypes of innovative products or services for a customer base.
- CO5.** Develop relevant products or services by choosing good design and applying empathy tools for experiencing user requirements.
- CO6.** Work independently and communicate effectively in oral and written forms.

CO-PO-PSO Mapping Table:

Course Outcomes	Program Outcomes

Course Correlation Mapping	1	3	2	3	1	-	1	2	3	3	2	1

Correlation Levels:

3: High;

2: Medium;

1: Low

EXPERIENTIAL LEARNING

LIST OF EXERCISES:

Introduction to Design Thinking – Design thinking Process, Definition, Importance, Phases of Design Thinking, Canva Tool.

1. Conduct survey and identify the problem by either individual or group and frame a problem statement using AEIOU (Activities, Environment, Interactions, Objects, Users) framework.
2. Identify demographic or focus group for problem statement and create persona and explicitly define the characteristics of persona using Canva tool.

Empathize - Role of empathy in design thinking, Purpose of Empathy Map, Empathy Tools – Customer Journey Map, Personas, Coggle Tool.

3. Build a Customer Journey Map (CJM-Before-During-After) and identify touch points for any mock scenario or persona created during last experiment and frame 2-3 questions using HMW (How Might We).
4. Create an Empathy Map using Coggle design thinking tool.

Sample Empathy Map:

Ideation - Importance of visualizing and empathizing before ideating, Applying the method, Ideation Tools - Story board, Brainstorming, Mind Map, SCAMPER.

5. **Story boarding design ideas:** Consider a mock scenario and create user stories and storyboards to transform information about user needs into design concepts using any story board tool.

6. Create Mind Map for your problem statement using Coggle.
Sample Mind Map:

7. Perform Brain Storming Session with your team and record using the SCAMPER framework and finalize the best three innovative ideas.

Prototyping and Testing – Definition, Prototype examples, Need for Prototyping, Fidelity for prototypes, Process of prototyping, Introduction to Marvel POP Software, Testing prototypes with users.

8. Create an application prototype for product recommendation using **Marvel POP Software**.
9. Create a **low-fidelity paper prototype** by sketching out the product design and adding relevant functionality.

10. Test the prototype created in Exercise 9 by interacting with each member of the team, walking them through the design and gathering feedback. Use feedback grid with the following quadrants: what worked, what could be improved, questions, and ideas.

What worked?	What could be improved?
Questions	Ideas

COURSE DESCRIPTION: Expose students to the industrial environment; Create competent professionals for the industry; sharpen the real time technical / managerial skills required at the job; Gain professional experience and understand engineer's responsibilities and ethics; Familiarize with latest equipment, materials and technologies; Gain exposure to technical report writing; Gain exposure to corporate working culture.

COURSE OUTCOMES: After successful completion of this course, the students will be able to:

- CO1** Analyze latest equipment materials and technologies that are used in industry to solve complex engineering problems following relevant standards, codes policies and regulations.
- CO2** Analyze safety, health, societal, environmental, sustainability, economical and managerial factors considered in industry in solving complex engineering problems
- CO3** Perform individually or in a team besides communicating effectively in written, oral and graphical forms on practicing engineering.

COURSE DESCRIPTION: This course deals with listening strategies, reading comprehension, grammar, vocabulary, pronunciation, Written, Verbal and Non-verbal communication, Channels of communication, Barriers to communication, Modes of technology-based communication, and Technical Communication

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Understand the basics of Reading, Writing, Listening, and Speaking skills.
- CO2.** Analyze the rules of English grammar in speaking and writing.
- CO3.** Demonstrate knowledge of English pronunciation in speaking.
- CO4.** Apply the knowledge of reading strategies and vocabulary in communication.
- CO5.** Apply the strategies of writing in preparing a report.

CO-PO Mapping Table:

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1: SUPER HEROES – THE SCIENCE BEHIND SUPER HEROES (06 Periods)

Reading for Comprehension, Grammar, Speaking, Listening, Vocabulary, Writing, Verbal and Non-verbal communication.

Module 2: ALIENS – THE CYLINDER OPENS (06 Periods)

Reading for comprehension, Grammar, Vocabulary, Writing, Listening, and Channels of communication.

Module 3: INVENTORS – THE RAMAN EFFECT (06 Periods)

Reading comprehension, Listening, Writing, Grammar, Speaking, Pronunciation, and communication barriers.

Module 4: HEALTH AND NUTRITION – WHAT SHOULD YOU BE EATING (06 Periods)

Reading comprehension, Listening, Speaking, Grammar, Writing, Pronunciation, and Modes of technology-based communication.

Module 5: NEW-AGE ENTREPRENEURS – HOW A CHINESE BILLIONAIRE BUILT HER FORTUNE (06 Periods)

Reading comprehension, Vocabulary, Listening, Grammar, Writing, and Technical Communication

Total Periods: 30

EXPERIENTIAL LEARNING

PART-A

Any six modules among the following:

1. Conversation starters and role play
2. Reading comprehension
3. Listening comprehension
4. Vocabulary Building (business and job-related vocabulary)
5. Describing people, places, objects, and Events
6. Phonetics - Accent/ Rhythm/ Intonation
7. Tenses
8. Proposal Writing

PART-B

Any four modules among the following:

1. Communicating effectively is important to become successful in any business. Prepare a Case study of successful business personnel regarding communication competence.
2. Prepare a PowerPoint presentation on an orator and analyze the voice dynamics.
3. People face situations to convince or agree with the points they have. The college arranges a 5-day tour program to Goa. Prepare a video on persuasive talk and convince parents to get permission.
4. Write an article on the famous clichés of our time.
5. Prepare a poster on the effects of social media on youth.
6. Give a short talk on the importance of inventors and their role in present socio,

- political and economic changes.
7. Prepare a collage of entrepreneurs' pictures and their achievements.
 8. NASA released recent photos of the universe with the help of the James Webb Space Telescope. Write down the expected impact on the existing theory on planets and the universe.
 9. Obesity is the most common problem for people. List out the reasons for the problem and prepare food habits to overcome.
 10. Epics of India deals with superheroes of those days. Compare the weapons used in the battles of Mahabharata with modern weapons.
 11. Write a report on your recently invented product so that it should be sold as a hot cake in the market.
 12. Illustrate the essential rules for good precis writing.

COURSE DESCRIPTION: This course deals with listening strategies, reading comprehension, grammar, vocabulary, pronunciation, Written, Verbal and Non-verbal communication, Channels of communication, Barriers to communication, Modes of technology-based communication, and Technical Communication

COURSE OUTCOMES: After successful completion of the course, students will be able to:

C01. Develop skills and techniques to speak and write with cohesion.

C02. Understand the usage of English grammar in speaking and writing.

C03. Demonstrate knowledge of right pronunciation in speaking.

C04. Apply the knowledge to build vocabulary in communication.

C05. Apply the strategies of writing in preparing a report and Email.

CO-PO Mapping Table:

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

2: Medium;

1: Low

COURSE CONTENT

Module 1: A TIME TO REMEMBER

(06 Periods)

Reading for Comprehension, Tenses, Speaking, Listening, Vocabulary, Writing - Email, Verbal and Non-verbal communication.

Module 2: TIME FOR CHANGE

(05 Periods)

Reading for comprehension, Degrees of Comparison, Vocabulary, Listening.

Module 3: ULTRA MARATHON

(05 Periods)

Reading comprehension, Listening, Vocabulary of sports, Pronunciation, speaking – Talk about favourite sport.

Module 4: HOTEL RESERVATIONS AND EXPENSES

(08 Periods)

HOTEL RESERVATIONS:

Reading comprehension – reading reviews, Speaking – calling to check into a hotel, make enquiries, framing questions, Grammar, Writing – writing reviews, Pronunciation.

EXPENSES:

Reading comprehension- analysing data, Vocabulary, Listening, Grammar - Tenses, Writing – writing a report. Speaking – Talk about making daily budget.

Module 5: BODY LANGUAGE

(06 Periods)

Reading comprehension, Vocabulary, Listening, Grammar, Speaking – Talking about importance of body language, giving mini presentations.

Total Periods: 30

EXPERIENTIAL LEARNING

PART-A

Any six modules among the following:

1. Conversation starters and role play
2. Reading comprehension
3. Listening comprehension
4. Vocabulary Building (business and job-related vocabulary)
5. Describing people, places, objects, and Events
6. Phonetics - Accent/ Tone/ Intonation
7. Grammar
8. Email Writing

PART-B

Any four modules among the following:

1. Identifying individual strengths and weaknesses raises self-awareness. Do a SWOT analysis and come up with an action plan to present in the classroom.
2. Prepare a sales pitch of your dream product/ app and explain USP.
3. "Gen -Z is a difficult generation". Do you agree with this statement? Tell why and how different Gen Z is.

4. Write an email to your Teacher of English explaining how a construction site near by is creating a hindrance to your learning.
5. Prepare a poster on the effects of social media on youth.
6. Give a short talk on the advantages and disadvantages of social media.
7. What are your thoughts on Mission Mars? Why do you think nations are investing heavily on this? Debate
8. Explain the downside of the development of current era.
9. Skills, Experience and education – which of these play an important role in life and why? Present your views
10. Talk about a time when you tried a weird / Awesome food. Describe your experience
11. Write an article on your experience of education. What are your recommendations to improve the system?

22LG105402	SOFT SKILLS	-	-	2	-	1
Pre-Requisite	-					
Anti-Requisite	-					
Co - Requisite	-					

COURSE DESCRIPTION: This course deals with an understanding of the fundamental soft skills and their practical social and workplace usage. It helps participants to communicate effectively and to carry themselves confidently and in harmony with their surroundings. They also learn how to identify and overcome the barriers in interpersonal relationships, and to employ oral and written communication, teamwork, leadership, problem-solving, and decision-making skills, to gain the best results.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- C01** Demonstrate knowledge of career skills by analyzing the strategies of Goal Setting, Thinking Skills, interpersonal skills, and etiquette
- C02** Analyze various situations by applying Assertive communication and Non-verbal forms in developing Interpersonal Skills
- C03** Apply appropriate managerial strategies by analyzing the conflicts in various situations
- C04** Demonstrate various communication styles by analyzing and applying Thinking Skills in diverse teams as an individual and a team member and during Interviews and Group Discussions
- C05** Analyze and apply appropriate strategies of emotional intelligence and adaptability skills for personal and professional success

EXPERIENTIAL LEARNING

COURSE CONTENT

***Any ten modules are mandatory among the following:**

Module 1: BODY LANGUAGE

Body language basics, Types of Body Language, Facial Expressions and their messages, Eye Contact Insights, Body Posture, Hand gestures, and finger movements

Module 2: ASSERTIVENESS

Communication Styles, Benefits, Asserting yourself, Tips, and Role Play

Module 3: GOALSETTING

Seven Steps of Goal Setting, Self-Motivation, Personal Goal Setting, and Setting Career Goals

Module 4: THINKING SKILLS

Positive Thinking, Creative Thinking, Lateral Thinking, Logical Thinking, and Intuitive Thinking

Module 5: TEAM BUILDING

Learning Activities, Management Essentials, and Team Building Scenarios

Module 6: CONFLICT MANAGEMENT

Ways of Resolving Conflict, Personality Types and Conflict, Conflict Resolution Process, and Team Conflict

Module 7: EMOTIONAL INTELLIGENCE

Definition, understanding emotions, Identifying emotional intelligence, and self-assessment

Module 8: ADAPTABILITY SKILLS

Understanding organizational communication, Identifying adaptability skills, and self-assessment.

Module 9: GROUP DISCUSSIONS

Types of GD, Dos, and Don'ts, Dynamics of GD, Intervention, and Summarization Techniques

Module 10: INTERVIEW SKILLS

Planning, Opening Strategies, Answering Strategies, Teleconferencing, Videoconferencing, Practice questions, and Dress code

Module 11: INTERPERSONAL SKILLS

Starting a Conversation, Responding to a Conversation, Conversation Examples, Body Language, and Role Play

Module 12: ETIQUETTE

Basic Social Etiquette, Telephone Etiquette, Dining Etiquette, Conference Etiquette, and Email Etiquette

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1: INTRODUCTION

(06 Periods)

Introduction - German alphabet, numbers, days in a week, names of months, seasons. Grammar: Nouns –(i)Nominative case and (ii) Nominative personal pronouns, simple sentence, Verb Conjugation 1st and 2nd type, verb Conjugation 3rd type, 'Wh' questions (simple sentences) Nominative (definite and indefinite) Articles

Module 2: CITY AND FOOD

(06 Periods)

In the city: naming places and buildings, means of transport, basic directions. Food: drink, groceries and meals. Apartments: rooms, furniture, colours. Grammar: Nouns-articles negation–(kein and nicht); imperative and the accusative case; Nominative Possessive Pronouns.

Module 3: DAY-TO-DAY CONVERSATIONS**(06 Periods)**

Everyday life, telling time, making appointments, leisure activities, and celebrations. Different types of professions, Health and the body, holidays and weather, Clothes and

Module 4: BASIC GRAMMAR**(06 Periods)**

Grammar: Possessive articles, Prepositions (am, um, von, bis); Modal verbs, Separable verbs, accusative, past tense of 'to have' and 'to be', imperative sentences, dative case, perfect tense.

Module 5: BASIC WRITING**(06 Periods)**

Translation from English to German and German to English, Contacts, Writing letters and Email Writing.

Total Periods: 30**EXPERIENTIAL LEARNING**

1. Prepare a report on the importance of the German language in India
2. Why is German taught in Indian schools?

(Note: It's an indicative one. Course Instructor may change activities and shall be reflected in course Handout)

22MM101401	MATRIX THEORY AND LINEAR ALGEBRA	3	-	-	-	3

Pre-Requisite -

Anti-Requisite -

Co-Requisite -

COURSE DESCRIPTION: This course provides a discussion on matrix factorizations, linear systems, Eigenvalues and Eigenvectors, vector spaces, linear transformations, and orthogonality.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Demonstrate the concepts of matrix factorizations and solutions of the linear system.
- CO2.** Determine the Eigenvalues and Eigenvectors of the matrix and implement the concept of Eigen values and decompositions of a matrix in intelligent systems.
- CO3.** Apply the concepts of vector spaces and linear transformation on problems of computational systems.
- CO4.** Use the inner product spaces for the study of orthogonality and to construct orthonormal basis.

CO-PO Mapping Table:

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	-	3	2	-	-	-	-	-	-	-
CO2	2	3	-	2	2	-	-	-	-	-	-	-
CO3	3	3	-	2	1	-	-	-	-	-	-	-
CO4	2	3	-	3	2	-	-	-	-	-	-	-
Course Correlation Mapping	3	3	-	3	2	-	-	-	-	-	-	-

Correlation Levels: **3: High; 2: Medium; 1: Low**

COURSE CONTENT

Module 1: MATRICES AND LINEAR SYSTEM OF EQUATIONS

(10 Periods)

Elementary Row-operations, Elementary Matrices, Echelon form, Rank of a matrix by row-reduction, Solutions of system of linear equations by row reduction, Matrix Factorization, LU factorization, LDU factorization.

Module 2: EIGEN VALUES, EIGEN VECTORS AND DIAGONALIZATION

(09 Periods)

Characteristic equation of a matrix, Eigenvalues and Eigenvectors of matrices, Similarity of matrices, Diagonalization by using Eigenvalues, Cayley-Hamilton Theorem (Without Proof), Evaluation of matrix powers.

Module 3 VECTOR SPACES

(10 Periods)

Vector spaces, Sub-spaces, Four fundamental subspaces of a matrix, Span, Linearly independent and dependent, Basis, construction of Basis, dimensions, Finite dimensional vector space.

Module 4 LINEAR TRANSFORMATION

(08 Periods)

Linear transformation, Kernel and range of linear transformation, Basic properties, Invertible linear transformation, Matrix of linear transformation.

Module 5 INNER PRODUCT SPACES

(08 Periods)

Inner product, Norm, Distance, Inner product space, Orthogonal and orthonormal basis, Gram-Schmidt orthogonalization, Singular Value Decomposition for square matrices.

Total Periods: 45

EXPERIENTIAL LEARNING

1. Let Breakfast consists of orange juice, cereal, and eggs with the following nutritional information:

	OJ	Cereal	Eggs
Protein	0%	10%	20%
Vitamin C	20%	15%	0%
Calories	100	120	100

If you must have 30% protein, 30% Vitamin C and 300 calories for your breakfast, How many servings of OJ, Cereal, and Eggs should you have?

2. Solve for the Eigen values and Eigen vectors of 2x2 matrix on paper and larger matrices using MATLAB.
3. Check that the complex numbers $\mathbb{C} = \{x + iy \mid i^2 = -1, x, y \in \mathbb{R}\}$, satisfy all of the conditions in the definition of vector space over $\mathbb{C}$. Make sure you state carefully what your rules for vector addition and scalar multiplication.

(It's an indicative one. The Course Instructor may change the activities and the same shall be reflected in Course Handout)

Anti-Requisite	22MM101403 -CALCULUS AND TRANSFORMATION TECHNIQUES					
Co-Requisite	-					

COURSE DESCRIPTION: This course consists of topics in Calculus and Transformation Techniques with applications to various engineering problems. It covers the topics, Mean Value Theorems, Taylor's and Maclaurin's Theorems. It includes functions of two or more variables together with their applications. This course is designed to train students with the basic integral transform techniques.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Make use of mean value theorems to solve engineering problems.
- CO2.** Identify the maxima and minima of multivariable functions.
- CO3.** Determine Laplace transform of different functions arising in engineering problems.
- CO4.** Apply Laplace transform and its inverse to solve initial and boundary value problems.
- CO5.** Determine the Fourier series and Fourier transforms of various functions.
- CO6.** Work independently or in teams to solve problems with effective communication.

COURSE CONTENT

Module 1: SINGLE VARIABLE CALCULUS

(08 Periods)

Rolle's Theorem, Lagrange's mean value theorem, Cauchy's mean value theorem, Taylor's and Maclaurin's theorems with remainders (without proof) related problems.

Module 2: MULTIVARIABLE CALCULUS

(07 Periods)

Introduction to function of several variables, Jacobian and its properties, Functional dependence, Maxima and minima of functions with two variables, Lagrange's multiplier method.

Module 3 LAPLACE TRANSFORMS

(10 Periods)

Definition of Laplace transform, Existence conditions, Laplace transforms of standard functions, Linearity property, First and second shifting theorems, Change of scale property, Laplace transforms of derivatives and integrals, Multiplication by t^n , Division by t , Laplace transform of periodic functions (without proofs), Laplace transforms of unit step function and unit impulse function.

Module 4 INVERSE LAPLACE TRANSFORMS

(10 Periods)

Definition of inverse Laplace transform, Linearity property, First and second shifting theorems, Change of scale property, Inverse Laplace transforms of derivatives and integrals, Multiplication by s , Division by s , Convolution theorem (without proofs), Applications of Laplace transforms to ordinary differential equations of first and second order with constant coefficients.

Module 5 FOURIER SERIES AND FOURIER TRANSFORMS

(10 Periods)

Fourier series: Determination of Fourier coefficients, Euler's formulae, Convergence of Fourier series (Dirichlet's conditions), Fourier series in $(-\pi, \pi)$, Half range sine and cosine expansions, Parseval's identity in $(0, \pi)$.

Fourier Transforms: Complex Fourier transform, Fourier sine and cosine transforms, Inverse Fourier transforms.

Total Periods: 45

EXPERIENTIAL LEARNING

1. Obtain the Taylor series of any Single variable function (Algebraic or Transcendental) and then plot the graph of the function given using MATLAB.
2. Verify Rolle's theorem for any function $f(x)$ in the interval $[a, b]$ using MATLAB.
3. Write a MATLAB program to verify Lagrange's mean value theorem for any function $f(x)$ in $[a, b]$.
4. Obtain the Taylor series of any multi variable function and then plot the graph of the function given using MATLAB.
5. Write a MATLAB program to estimate the maxima and minima of a two variable function.
6. Estimate the maxima and minima of a multivariable function using Lagrange multiplier method through MATLAB.
7. Write MATLAB codes to find Partial derivative of a given function $f(x, y)$ at a given point (x_1, y_1) and also visualize it.
8. Solve and visualize solutions of the first order differential equations using Laplace

transform through MATLAB code.

9. Solve and visualize solutions of the second order differential equations using Laplace transform through MATLAB code.
10. Find the constant, first sine and cosine terms in the Fourier series expansion of the function $y=f(x)$ from the given data through MATLAB.

COURSE DESCRIPTION: This course focus on basic areas of theory and more advanced Engineering Mathematics topics which provide students with the relevant mathematical tools required in the analysis of problems in Engineering and scientific professions. This course includes Fourier series, Fourier Transforms, Laplace transforms, Inverse Laplace transform, solutions for linear systems, Eigen values and Eigen vectors, Linear transformation.

COURSEOUTCOMES:After successful completion of the course, students will be able to:

- CO1** Demonstrate Fourier series to study the behavior of periodic functions and their applications and Fourier transform to connect the frequency and time domain systems
- CO2** Apply the techniques of Laplace transform to solve ordinary different ialequations
- CO3** Make use of echelon forms in finding the solution of system of linear equations. Compute Eigen values and Eigen vectors of square matrices
- CO4** Use the fundamental concept of a basis for a subspace to give aprecise definition of dimensions and rank,and to solve problems in appropriate situations
- CO5** Work independently orinteam to solve problems with effective communication

COURSE CONTENT

Module1: FOURIER SERIES & FOURIER TRANSFORMS

(09 Periods)

Introduction to Fourier series, Convergence of Fourier series (Dirichlet's conditions), Fourier series in $(-\pi, \pi)$, Half-range Fourier sine and cosine expansions in $(0, \pi)$, Fourier integral theorem (statement only), Fourier sine and cosine integrals; Fourier transforms, Fourier sine and cosine transforms, Inverse Fourier transforms.

Module2: LAPLACE TRANSFORMS

(09 Periods)

Definition of Laplace transforms, Existence conditions, Laplace transforms of standard functions, Properties of Laplace transforms (without proofs), Laplace transforms of derivatives, Laplace transforms of integrals, Multiplication by t^n , Division by t , Laplace transforms of periodic functions, Laplace transforms of unit step function and unit impulse function.

Module3 INVERSE LAPLACE TRANSFORMS

(09 Periods)

Inverse Laplace transforms by different methods, Convolution theorem (without proof), Inverse Laplace transforms by convolution theorem, Applications of Laplace transforms to ordinary differential equations of first and second order with constant coefficients.

Module4 LINEAR ALGEBRA-MATRICES

(09 Periods)

Rank of a matrix: Echelon form, Linear systems of equations: solving system of Homogeneous and Non-Homogeneous equations; Eigenvalues and Eigenvectors of a matrix and properties (without proofs), Diagonalization of a matrix by orthogonal transformation, Cayley-Hamilton Theorem.

Module5 LINEAR ALGEBRA-VECTOR SPACES

(09 Periods)

Vector spaces, Linear dependence and independence of vectors, Basis, Dimension, Linear transformations (maps), Range and Kernel of a linear map, Rank and Nullity, Inverse of a linear transformation, Rank-Nullity theorem (without proof).

Total Periods: 45

EXPERIENTIAL LEARNING

1. Find the constant, first sine and cosine terms in the Fourier series expansion of the function $y=f(x)$ from the given data through MATLAB.
2. Plot and visualize the first four terms of a Fourier series of a function $f(x)$ in $[0, 2\pi]$ using MATLAB.
3. Plot and visualize the first four terms of a Fourier series of a function $f(x)$ in $[-\pi, \pi]$ using MATLAB.
4. Solve and visualize solutions of the first order differential equations using Laplace transform through MATLAB code.
5. Solve and visualize solutions of the second order differential equations using Laplace transform through MATLAB code.

6. Write a MATLAB program to verify the Cayley-Hamilton theorem for the given square matrix and also to find A^n .
7. Find the Eigen values and Eigen vectors of the non symmetric matrix through MATLAB code.
8. Find the Eigen values and Eigen vectors of the symmetric matrix through MATLAB code.
9. Diagonalize the given square matrix through similarity transformation using MATLAB.
10. Diagonalize the given square matrix through orthogonal transformation using MATLAB.

Pre-Requisite	-					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION: This course contains various numerical methods to solve algebraic and transcendental equations and differential equations. This course also contains probability distributions and interpretation of hypothesis test for large and small samples.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Determine the approximate root of an equation and apply different methods to compute the value of interpolating polynomial at given point.
- CO2.** Evaluate integrals making use of quadrature formulae and solve ordinary differential equations numerically.
- CO3.** Use discrete and continuous distribution models to calculate probabilities for appropriate random variables.
- CO4.** Demonstrate and apply the basic concepts of inferences concerning means and proportions to the decision making process.
- CO5.** Interpret hypotheses test for small samples.

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1 ALGEBRAIC AND TRANSCENDENTAL EQUATIONS, (09 Periods) **INTERPOLATION**

Solution of algebraic and transcendental equations: Bisection method and Newton-Raphson's method. Finite differences, relation between operators, interpolation using Newton's forward and backward difference formulae. Interpolation with unequal intervals: Lagrange's formula.

Module 2 NUMERICAL DIFFERENTIATION AND INTEGRATION (10 Periods)

Numerical Differentiation- Newton's forward and backward difference formulae, numerical integration- trapezoidal rule, Simpson's $1/3^{\text{rd}}$ and $3/8^{\text{th}}$ rules.

Module 3 RANDOM VARIABLE AND DISTRIBUTIONS (09 Periods)

Random variables (discrete and continuous), probability density functions, probability distribution: Binomial - Poisson - normal distribution and their properties (mathematical expectation and variance).

Module 4 TEST OF SIGNIFICANCE FOR LARGE SAMPLES (09 Periods)

Formulation of null hypothesis, critical regions, level of significance. Large sample tests: Test for single proportion, difference of proportions, test for single mean and difference of means.

Module 5 TEST OF SIGNIFICANCE FOR SMALL SAMPLES (08 Periods)

Student's t-distribution (single mean, two means and paired t-test), Testing of equality of variances (F-test). Chi-square test for goodness of fit.

Total Periods: 45

EXPERIENTIAL LEARNING

1. Write a Python program to solve algebraic equation by bisection method.
2. Write a Pseudo code on numerical integration using Simpson1/3 method.
3. What is the importance of probability distribution in computer science engineering?
4. If you draw from a normal distribution with known values of parameters, how do you generate draws in a uniform distribution?

COURSE DESCRIPTION: This course provides a detailed discussion on different sample collection methods, correlation and regression, ANOVA, non parametric tests and statistical quality control and also real-time applications of all these different types' statistical techniques. This course also gives ability to implement features of ANOVA and experimental design and to perform the data analysis by using non parametric tests.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1** Identity different sample collection methods, probability theorems, interpretation and presentation techniques for decision making.
- CO2** Analyse correlation and regression to measure the relationship between two variables.
- CO3** Apply ANOVA concepts to make a confident and reliable decision.
- CO4** Perform data analysis using non- parametric tests.
- CO5** Apply statistical quality control to design charts for monitoring the process performance of a continuous data.

Course Correlation Mapping	3	3	2	-	-	-	-	-	-	-	-	-
Correlation Levels: 3: High; 2: Medium; 1: Low												

COURSE CONTENT

Module 1: DESCRIPTIVE STATISTICS AND PROBABILITY (10 Periods)

Descriptive Statistics: Collection of data, Classification and Tabulation of data, Diagrammatic and Graphic representation of data, Measures of Central value - Mean, Median, Mode; Measures of Dispersion- Quartile deviation, Mean deviation, Standard deviation;

Probability: Definition of probability, Addition theorem, Multiplication theorem, Bayes' theorem.

Module 2: CORRELATION ANALYSIS & REGRESSION ANALYSIS (09 Periods)

Correlation Analysis: Introduction to Correlation, Types of Correlation, Methods of Studying Correlation, Karl Pearson's Coefficient of Correlation, Rank Correlation Coefficient, Partial Correlation, Multiple Correlation.

Regression Analysis: Introduction and uses of Regression Analysis, Difference between Correlation and regression analysis, Regression lines, *Regression equations*.

Module 3 ANOVA & EXPERIMENTAL DESIGN (10 Periods)

ANOVA: Introduction to ANOVA, Assumptions of ANOVA, Techniques of ANOVA, ANOVA in One way and Two-Way Classification Model,

Experimental Design: Randomized Block Design, Latin Squares, Randomized Blocks Vs Latin Square.

Module 4 NON-PARAMETRIC TESTS (08 Periods)

Introduction to Non-Parametric tests, Advantages of Non-Parametric Tests, The Sign Test, A Rank Sum Test: The Mann-Whitney U-Test, The One Sample Runs Test, The Kruskal-Wallis Or H-Test.

Module 5 STATISTICAL QUALITY CONTROL (08 Periods)

Introduction to SQC, Advantages and limitations of SQC, Control Charts, $\bar{X}$ Chart, R Chart, Control Chart for C, Control Chart for P.

Total Periods: 45

EXPERIENTIAL LEARNING:

1. Let's say you golfed nine holes. Each number below represents the number of swings it took you to sink the ball in the hole. If you're lucky and you have some golf skills, your score is the following:
8, 4, 10, 4, 4, 5, 4, 5, 6
You go back into the clubhouse and are quite pleased with your score. Your friend says that his mean score was 6, his median was 7 and his mode was 6. Did you score better than your friend?
2. A Company organizes meetings often. Find the efficiency of the meetings using correlation analysis by considering two values. Namely, time spent for the meetings and positive ideas came out of the meeting. Draw a graph to analyse the efficiency the meeting conducted in a year.
3. A large scale farm is interested in understanding which of three different fertilizers leads to the highest crop yield. They sprinkle each fertilizer on ten different fields and measure the total yield at the end of the growing season. To understand whether there is a statistically significant difference in the mean yield that results from these three fertilizers, conduct ANOVA using "type of fertilizer" as the factor and "crop yield" as the response.

(Note: It's an indicative one. Course Instructor may change activities and shall be reflected in course Handout)

COURSE DESCRIPTION: This course provides a detailed discussion and hands-on experience on Google AI tools for speech recognition, language detection and Python API to build Machine Learning Models. This course also focuses on demonstration of Cloud Services and tools, Internet of Things with Arduino and simulation of robots using robotics development platform.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- C01.** Use Google AI tools for speech recognition and language detection.
- C02.** Construct Machine Learning Models using Python API to solve Classification problems.
- C03.** Use Cloud Services and tools for effective collaboration and data sharing
- C04.** Design an interface to embedded systems using real time sensors with Arduino.
- C05.** Design and simulate robot using robotic simulation platforms for societal applications.
- C06.** Work independently and communicate effectively in oral and written forms.

Correlation Levels: 3: High; 2: Medium; 1: Low

EXPERIENTIAL LEARNING

LIST OF EXERCISES:

Artificial Intelligence – Introduction, Applications, Trends, Technologies, Relevant Libraries/API; Machine Learning – Introduction, Applications, Python Libraries/API.

1. Speech Recognition: Read an audio file with Python and use the Google Speech Recognition API to perform conversion of Speech to Text.
2. Language Detection: Detect the language of the text using Language Detection Library (langdetect) ported from Google's language detection.
3. Object Detection: Detect multiple objects present in an image using Detection- Facebook's API.
4. Build a classification model using Decision Tree learning algorithm. Use Iris dataset and scikit-learn python library to build the model.

Cloud Computing – Introduction, Applications, Services - PaaS, IaaS, SaaS, Virtualization, Application Deployment.

5. Create Windows virtual machine using VMware workstation under IaaS.
6. Create online survey forms, questionnaires and analyse the result of survey using Zoho under SaaS.
7. Develop a web application and deploy the same on Amazon Simple Storage Service.

Internet of Things - Introduction, Applications, Arduino IDE, Servo Motor, Sensors, ECG System.

8. Design and simulate Servo motor interfacing with Arduino.
9. Design and simulate Flame Sensor interfacing with Arduino.
10. Design and implement an IoT ECG (Electrocardiogram) System to record hearts electrical activity.

Robotics - Introduction, Applications, understanding robotics development platform to model, Program and Simulate robots.

11. Design a Two Wheel line following robot integrated with infrared sensors.
12. Design a collision avoidance robot in multi obstacle based environment.

COURSE DESCRIPTION: This course covers the basic programming constructs of Go language. It emphasizes the concepts including string handling and implementation of HTTP protocols in Go language. The course also provides hands on training on application development using MIT app inventor and GIT commands related to repositories.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Create source code repositories using GitHub.
- CO2.** Create communication between client to server and develop interactive software applications using GO language.
- CO3.** Develop basic mobile applications using MIT App inventor.
- CO4.** Work independently and communicate effectively in oral and written Forms.

CO-PO-PSO Mapping Table:

EXPERIENTIAL LEARNING

List of Experiments:

GIT HUB

Theory Topics: Git Basics, Git repositories, local repositories, remote repositories, Secure shell encryption algorithm.

1. Configuration of Git using gitconfig, gitlog and gitaliases commands.
2. Initializing the local repositories using Git commands: add, commit and status.
3. Moving the local repository to the Git hub using the commands remote, push and pull.
4. Creation of remote access to Github using SSH key.
5. I/O management system with Github using branch and merge techniques.

Go Programming Language

Theory Topics: Variables, Data types, Conditional statements, Looping statements, strings.

1. Peano numbers are a simple way of representing the natural numbers using only a zero value and a successor function. Ex. 0->1->2->3->5.... Write a GO program to generate Peano integers.
2. Write a GO program to check if two trees are equivalent if they both have the same topology and if the objects contained in corresponding nodes are equal.
3. Hypertext Transfer Protocol (HTTP) is an application-layer protocol for transmitting hypermedia documents. It was designed for communication between web client and web servers. Write a program to configure HTTP server for establishing a simple client – server communication.
4. Code the solutions to a few string-related hacker rank problems.

Ex: Prints the text of each line that appears more than once in the standard input, preceded by its count.

Build Apps with MIT App Inventor

Theory Topics: Frames, Blocks, embedding audio & video

1. Develop the Hello Codi App by using MIT App Inventor with the components: Blocks Editor, audio, video, clock timer.
2. Develop a Digital Doodle Application using MIT App Inventor.

COURSE DESCRIPTION: This course provides a detailed discussion and hands-on experience on internal components of a computer, assemble a computer system, install an operating system, and troubleshoot using system tools and diagnostic software. Students will also be able to understand various network cables, connectors and TCP/IP networks, and work group.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Identify different hardware components on personal computer and peripheral devices.
- CO2.** Create network architecture using TCP and UDP protocols for data transmission.
- CO3.** Devise the solutions for the problems occurred in personal computer in Operating Systems.
- CO4.** Implement the functionalities of different peripheral devices and networks by configuring multi-functional devices.

CO-PO-PSO Mapping Table:

EXPERIENTIAL LEARNING

LIST OF EXERCISES:

HARDWARE CONFIGURATION

Peripherals of the computer

1. Implement the following activities:
 - a) Configure settings using BIOS/UEFI tools on a PC.
 - b) Identify different components of mother board
 - c) Analyze various RAM types, PC extensions cards and storage devices
2. Implement the following activities:
 - a) Identify various CPU's, cooling methods and PC connection interfaces
 - b) Identification of various power supply, display devices and common PC Connectors
 - c) Install and configure common peripheral devices and SOHO multi-function device

PC Networking using Packet Tracer

Network Types and Components, Topologies, Wired and Wireless Transmission, Protocols.

3.
 - a) Identify various types of network cables and connectors and characteristics
 - b) Implement the following characteristics of TCP/IP
 - i) IPv4 and IPv6
 - ii) Client side DNS Settings
4.
 - a) Identify following TCP and UDP Ports
 - i) 21-FTP
 - ii) 443-HTTPS
 - iii) 80-HTTP
 - iv) Telnet
 - b) Analyze the following TCP and UDP protocols
 - i) SMD
 - ii) SNMP
 - iii) DHCP
5.
 - a) Configure the following network types
 - i) LAN
 - ii) WAN
 - iii) WLAN
 - b) Configure network architecture using the following
 - i) HUB
 - ii) Switch
 - iii) Router

OPERATING SYSTEMS

Introduction to Operating System, Characteristics of Operating System, Types of Operating System and its components

6. Installation of Windows Operating System
7. Installation of Application and Device Drivers management

TROUBLESHOOTING

Introduction to trouble shooting, Hardware and Software Trouble shooting

8.
 - a) Study the common problems related to the following
 - i) Mother Board
 - ii) RAM
 - iii) CPU
 - iv) Power
 - b) Troubleshoot the following failures
 - i) Read/Write Failure
 - ii) Slow Performance
 - iii) Failure to boot
9. Trouble Shoot the following symptoms of Video, projector and display issues
 - i) VGA Mode
 - ii) No Image of Screen
 - iii) Dead Pixels
 - iv) Color patterns
10. Trouble shoot the following issues of wired, wireless and mobile devices
 - i) No Connectivity
 - ii) IP conflict
 - iii) Ghost Cursor
 - iv) Sticking Keys

Pre-Requisite Programming for Problem solving

Anti-Requisite

Co-Requisite

COURSE DESCRIPTION: This course provides a detailed discussion on basic characteristics of Object Oriented Programming through C++. It covers basic Object Oriented Programming paradigms like Classes and Objects in custom application development. The OOP concepts types of overloading and inheritance are also covered. It provides hands-on experience in implementation of OOP features and other programming concepts like handling pointers, file and exceptions.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Demonstrate the concepts of Object oriented programming.
- CO2.** Apply function and operator overloading techniques for code optimization.
- CO3.** Apply inheritance and virtual functions to implement dynamic binding.
- CO4.** Develop robust applications using exception handling mechanism and file I/O.
- CO5.** Develop reliable applications to solve real world problems using Object oriented programming constructs.
- CO6.** Work independently or in team to solve problems with effective communication.

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1: C++ FUNDAMENTALS

(10 Periods)

Need of Object-Oriented Programming - Comparison of procedural programming and Object-Oriented Programming - Characteristics of Object-Oriented Languages - C++ Programming Basics: Basic Program Construction - Data Types, Variables, Constants - Type Conversion, Operators, Library Functions - Loops and Decisions, Structures - Functions : Simple Functions, Passing arguments, Returning values, Reference Arguments. - Recursion, Inline Functions, Default Arguments - Storage Classes - Arrays, Strings.

Module 2: OOP FUNDAMENTALS

(09 Periods)

Classes and Objects: Classes, Friend functions, Friend classes, Inline functions, Parameterized constructors, Static Class Members, The Scope resolution operator, nested and local classes, Passing Objects to functions, returning objects, object assignment. Arrays, Pointers, References: Array of Objects, Pointers to objects, the This pointer.

Module 3 FUNCTION AND OPERATOR OVERLOADING

(09 Periods)

Function Overloading: Copy Constructors, and Default Arguments: Function Overloading, Overloading Constructors, Copy constructors, Default Function Arguments.

Operator Overloading: Creating a member operator function, operator overloading using a friend function, overloading new and delete, overloading some special operators, and comma operator.

Module 4 INHERITANCE AND VIRTUAL FUNCTIONS

(09 Periods)

Inheritance: Base Class Access Control, Inheritance and protected members, inheriting multiple base classes, constructors, destructors, and inheritance, granting access, virtual base classes.

Virtual Functions: Pointers to objects, Pointers to derived classes, Virtual Functions, Pure Virtual Functions.

Module 5 FILE I/O AND EXCEPTIONS

(08 Periods)

Files: File Pointers - Error handling in File I/O - File I/O with member Functions - Overloading the extraction and Insertion Operators - Multi File Programs

Exceptions: Need of Exceptions, keywords, Simple and Multiple Exceptions - Re-throwing Exception and Exception Specifications, Custom Exception

Total Periods: 45

EXPERIENTIAL LEARNING

LIST OF EXERCISES:

OOPS & C++ Fundamentals

1. a. Write a C++ program to identify appropriate data types and variables to find the size of various datatypes. Display the variables along with their size.
b. Write a C++ program to take name, address as character array, age as int, salary as float and contains inline functions to set the values and display it.
2. a. Write a C++ program to display names, roll no and grades of 3 students who have appeared in examination. Declare the class of name, roll no and grade. Create an array of class objects, read and display the contents of array.
b. Create a class TIME with members hours, minutes, seconds. Take input, add two time objects passing objects to function and display the resultant time in hours, minutes & seconds.
3. Given that an EMPLOYEE class contains following members: data members: Employee number, Employee name, Basic, DA, IT, Net Salary and print data members. Write a C++ program to read the data of N employee and compute Net salary of each employee (DA=52% of Basic and Income Tax (IT) =30% of the

gross salary).

POLYMORPHISM

4. a. Create a base class `basic_info` with data members `name`, `roll no`, `sex` and two member functions `getdata` and `display`. Derive a class `physical_fit` from `basic_info` which has data members `height` and `weight` and member functions `getdata` and `display`. Display all the information using object of derived class.
- b. Consider two complex number in the form $a+bi$ and $c+dj$, Write a program overload binary `+` operator to perform addition of the complex numbers.

INHERITANCE

5. a. Write a C++ Program to calculate the area and perimeter of rectangles using concept of Hierarchical inheritance. Area class is derived from base class `Rectangle`. Perimeter class is also derived from base class `Rectangle`.
- b. Write a C++ program to create `Employee` and `Student` inheriting from `Person` using Hierarchical Inheritance. The `Person` class should contain the common attributes of `Employee` and `Student` class.
6. Design three classes `STUDENT`, `EXAM` and `RESULT`. The `STUDENT` class has data members such as `rollno`, `name`. Create a class `EXAM` by inheriting the `STUDENT` class. The `EXAM` class adds data members representing the marks scored in six subjects. Derive the `RESULT` from the `EXAM` class and has its own data members such as `total marks`. Write a C++ program to model this relationship.
7. Create a base class called `SHAPE`. Use this class to store two double type values. Derive two specific classes called `TRIANGLE` and `RECTANGLE` from the base class. Add to the base class, a member function `getdata()` to initialize base class data members and another member function `display` to compute and display the area of figures. Make `display` a virtual function and redefine this function in the derived classes to suit their requirements. Using these three classes design a program that will accept driven of a `TRIANGLE` or `RECTANGLE` interactively and display the area.

FILE I/O

8. a. Write a C++ program named `store_temps.cpp` that creates a file named `raw_temps.txt` with temperature data. Fill the file with at least 50 temperature readings.
- b. Assuming that a text file named `FIRST.TXT` contains some text written into it, write a function named `copyupper()` in C++, that reads the file `FIRST.TXT` and creates a new file named `SECOND.TXT` contains all words from the file `FIRST.TXT` in uppercase.
9. Write a C++ program that accepts two file names and produces a new file that is the contents of the first file followed by the contents of the second; that is, the program concatenates the two files.

EXCEPTION HANDLING

10. Add an exception handler (`try/catch/throw`) to the class that throws an error message (e.g. "value out of range") in the `getValue` function that is caught and handled in the main program. Implement two version of the program. In version1, throw the error in `getValue`, catch the error in the main, display an error message in the main, and then allow the program to terminate. In the second version, perform the same basic actions (throw and catch) but keep re-invoking the `getValue` function from the main program until the user enters a valid value.

PROJECT BASED LEARNING:

Faculty shall provide Projects relevant to the contents of the course.

Sample Projects:

1. Bookshop inventory system

The project is to build the bookshop inventory system in C++ that helps to keep track of all the book records in a shop. Below are the features to be implemented:

- Add new book and the details of the book are:
 - Book ID
 - Name of book
 - Name of Author
 - Number of books
- Delete a book
- Update an existing book detail
- Display summary of all the books
- Search a book

2. Online Examination Management System

The project is to build the online examination management system in C++ that helps to conduct online proctored examinations. Below are the features to be implemented:

- Add New Students
- Student Login
 - Registration for examination
 - Attempting the questions
- Faculty Login
 - Uploading the questions
- Proctor Login
 - Online monitoring of students
- Admin View
 - Consolidation of marks
 - Release of results

COURSE DESCRIPTION: This course is emphasize on the fundamentals structure design with classes including development, testing, implementation and documentation. This course also focuses on understanding and practical mastery of object oriented concepts such as classes, objects, data abstraction, methods, method overloading, inheritance and polymorphism. By end of the course, students will acquire the basic knowledge and skills necessary to implement object-oriented programming techniques in software development using Java.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Apply object oriented programming constructs to solve computational problems.
- CO2.** Use Exception handling and multithreading mechanisms to create efficient software applications.
- CO3.** Create Web based applications using collections frameworks to solve real world problems.
- CO4.** Design and develop GUI using applets and swings for internet and system based applications.
- CO5.** Work independently or in team to solve problems with effective communication.

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1: OOPS FUNDAMENTALS

(09 Periods)

Introduction: History of Java, Byte code, JVM, Java buzzwords, OOP principles, Data types, Variables, Scope and life time of variables, Operators, Control statements, Type conversion and casting, Arrays.

Concepts Of Classes And Objects: Introducing methods, Method overloading, Constructors, Constructor overloading, Usage of static with data and method, Access control, this key word, Garbage collection, String class, StringTokenizer.

Module 2: INHERITANCE, INTERFACE AND PACKAGES

(09 Periods)

Inheritance basics, Types of inheritance, Member access rules, Usage of super key word, Method overriding, Usage of final, Abstract classes, Interfaces - differences between abstract classes and interfaces, defining an interface, implementing interface, applying interfaces, variables in interface and extending interfaces; Packages - defining, creating and accessing a package, importing packages, access control in packages.

Module 3 EXCEPTION HANDLING AND MULTITHREADING

(10 Periods)

Exception Handling: Concepts of exception handling, Types of exceptions, Usage of try, catch, throw, throws and finally keywords, Built-in exceptions, Creating user defined exception;

Multithreading: Concepts of multithreading, Differences between process and thread, Thread life cycle, Creating multiple threads using Thread class and Runnable interface, Synchronization, Thread priorities, Inter thread communication.

Module 4 COLLECTION FRAMEWORK

(08 Periods)

Collection Framework: Collections Overview, Collection Interfaces - List, Set, Map, List - ArrayList, Linked List, Vector, Set - HashSet, TreeSet, Map - Hashtable, HashMap, Accessing a collection via an Iterator, comparator, comparable.

Module 5 GUI PROGRAMMING

(09 Periods)

GUI Programming With Applets: Applets - Applet Class, Applet skeleton, Simple Applet; Delegation event model - Events, Event sources, Event Listeners, Event classes, handling mouse and keyboard events.

Exploring Swing Controls: JLabel and Image Icon, JText Field, JButton, JCheckBox, JRadioButton, JTabbed Pane, JList, JCombo Box.

Total Periods: 45

EXPERIENTIAL LEARNING

LIST OF EXERCISES:

OOPS Fundamentals

1. a) Develop a Java application for generating Electricity bill.
Create a class with the following members: Consumer no., consumer name, previous month reading, current month reading, type of EB connection (i.e domestic or commercial). Compute the bill amount using the following tariff. If the type of the EB connection is domestic, calculate the amount to be paid as follows:
 - First 100 units - Rs. 1 per unit
 - 101-200 units - Rs. 2.50 per unit

- 201 -500 units - Rs. 4 per unit
- >501 units - Rs. 6 per unit

If the type of the EB connection is commercial, calculate the amount to be paid as follows:

- First 100 units - Rs. 2 per unit
- 101-200 units - Rs. 4.50 per unit
- 201 -500 units - Rs. 6 per unit
- > 501 units - Rs. 7 per unit

- b) Design a class to represent a Student details include the Student ID, Name of the Student, Branch, year, location and college. Assign initial values using Constructor. Calculate average of marks of 6 subjects and calculate attendance percentage.
2. a) Create a class Student which has data members as name, branch, roll no, age, sex, marks in five subjects. Display the name of the student and his percentage who has more than 70%. Use array of objects.
 - b) Write a program to perform addition of two complex numbers using constructor overloading. The first constructor which takes no argument is used to create objects which are not initialized, second which takes one argument is used to initialize real and imaginary parts to equal values and third which takes two argument is used to initialize real and imaginary to two different values.

Inheritance

- 3 a) Create a base class basic_info with data members name, roll no, sex and two member functions getdata and display. Derive a class physical_fit from basic_info which has data members height and weight and member functions getdata and display. Display all the information using object of derived class.
- b) Create class first with data members book no, book name and member function getdata and putdata. Create a class second with data members author name, publisher and members getdata and showdata. Derive a class third from first and second with data member no of pages and year of publication. Display all these information using array of objects of third class.
- 4 A High School application has two classes: The Person superclass (Name, age, Gender) and the Student subclass (RegNo, Dept, CGPA). Using inheritance, create two new classes, Teacher and College Student. Teacher will be like Person but will have additional properties such as salary (the amount the teacher earns) and subject (e.g., "Computer Science", "Chemistry", "English", "Other"). The College Student class will extend the Student class by adding a year (current level in college) and major (e.g., "Electrical Engineering", "Communications", "Undeclared"). Create objects and test the functionality of all the methods.
- 5 Develop a java application for generating pay slip on different category of employees using the concept of inheritance.

Exception Handling and Multithreading

- 6 Consider two integers x and y as input and compute the value of x/y. Implement a class which raise an exception if x and y are not signed integers or if y is zero.
- 7 a) Write a java program that implements a multi-thread application that has three threads. First thread generates random integer every 1 second and if the value is even, second thread computes the square of the number and prints. If the value is odd, the third thread will print the value of cube of the number
- b) Write a program that creates three threads. First thread displays "Good Morning" every one second, the second thread displays "Hello" every two

seconds and the third thread displays "Welcome" every three seconds.

Collection Framework

- 8 Write a Java program that works as a simple calculator. Use a grid layout to arrange buttons for the digits and for the +, -, *, % operations. Add a text field to display the result. Handle any possible exceptions like divide by zero.

GUI Programming

- 9 a) Write a java program that simulates a traffic light. The program lets the user select one of three lights: Red, Yellow or Green with radio buttons. On selecting a button an appropriate message with "STOP" or "READY" or "GO" should appear above the buttons in selected color. Initially, there is no message shown.
- b) Write an Applet that computes the payment of a loan on the amount of the loan, the interest rate and the number of months. It takes one parameter from the browser. Monthly; if true, the interest rate is per month, otherwise the interest rate is annual.
- c) Write a java programs to find factorial of a number. User is allowed to enter a number into the text field whose factorial is to be determined. On pressing the button the value of the text field is firstly converted into integer and then processed to find its factorial. The result will get displayed in another text field. (Hint: use swings).

PROJECT BASED LEARNING:

Faculty shall provide Projects relevant to the contents of the course.

Sample Projects:

1. CALENDER APPLICATION

Develop a calendar application that uses many windows properties to make it colorful, for example, to indicate the vacation, it uses the red foreground color. The calendar can be used for two purposes. First to see the date and month as usual calendars and second to find out the day corresponding to given date. Some of the salient features of the project are

1. It uses various windows properties to make the program colorful although it has lack of graphics.
2. It entirely uses java code which is written in simple manner with lots of comments and important notes can be added.
3. The date with such notes appears different than others with red background color
4. The months can be navigated using arrow keys.

2. TICKET RESERVATION SYSTEM

Develop Ticket reservation system to manage details of seats, passenger, trains, Bookings and stations. The features required to be implemented are as follows

1. Provides searching facility based on factors such as seats, trains, booking and stations
2. Manage the information of passengers
3. Shows the information of the seats and trains
4. Provide filter on train, booking, time and station
5. Information Management of booking
6. Export excel report for trains, passengers and station
7. Export pdf for booking details

SCHOOL CORE

Course Code	Course Title	L	T	P	S	C
22CM101402	PRINCIPLES OF BUSINESS ECONOMICS AND ACCOUNTANCY	3	-	-	-	3
Pre-Requisite						
Anti-Requisite						
Co-Requisite						

COURSE DESCRIPTION: Business economics and demand analysis; theory of production and cost analysis; markets and pricing; principles of accounting and capital; final accounts and tally ERP 9.0

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1** Demonstrate the principles of Business Economics and theories of Demand.
- CO2** Apply the theories of Production and Cost to the managerial decision-making of an organization.
- CO3** Determine the Price and Output relation in the different Market structures.
- CO4** Demonstrate the principles of Accountancy and sources of Capital.
- CO5** Analyze the profitability and soundness of an organization.

CO-PO Mapping Table:

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	-	-	-	-	-	1	-	3	-	2
CO2	3	2	-	-	-	-	-	1	-	3	-	2
CO3	3	2	-	-	-	-	-	1	-	3	-	2
CO4	3	2	1	-	-	-	-	1	-	3	-	2
CO5	3	2	1	-	-	-	-	1	-	3	-	2
Course Correlation Mapping	3	2	1	-	-	-	-	1	-	3	-	2

Correlation Levels:

3: High;

2: Medium;

1: Low

COURSE CONTENT

Module 1: BUSINESS ECONOMICS AND DEMAND ANALYSIS (09 Periods)

Definition - Nature and Scope of Business Economics - Demand: Determinants of demand - Demand function - Law of demand, assumptions, and exceptions - Elasticity of demand - Types of elasticity of demand - Demand forecasting and methods of demand forecasting.

Module 2 THEORY OF PRODUCTION AND COST ANALYSIS (09 Periods)

Production Function: Input-output relationship - Law of Variable proportion- Isoquants and Isocosts

Cost Concepts: Total, Average and Marginal Cost - Fixed vs. Variable costs - Opportunity Costs Vs Outlay Costs- Separable Costs Vs Joint Costs, Urgent Costs Vs Postponable Costs- Avoidable Costs Vs Unavoidable Costs

Break Even Analysis (BEA) - Assumptions, Merits and demerits - Determination of Break-Even Point (Simple problems).

Module 3 MARKETS AND PRICING (09 Periods)

Market Structure: Types of Markets - Features of perfect competition - Monopoly and monopolistic competition - Price and Output determination in perfect competition, monopoly and monopolistic Markets.

Pricing: Objectives and policies of pricing - Sealed bid pricing - Marginal cost pricing - Cost plus pricing - Going rate pricing - penetration Pricing -skimming Pricing - Block pricing - Peak load pricing - Cross subsidization.

Module 4 PRINCIPLES OF ACCOUNTING & CAPITAL (09 Periods)

Accountancy: Introduction - Concepts - Conventions - Double Entry Book Keeping - Journal - Ledger - Trial Balance (Simple problems)

Capital: Significance - Types of capital - Sources of Capital.

Module 5 FINAL ACCOUNTS & TALLY ERP 9.0 (09 Periods)

Introduction to Final Accounts - Trading account - Profit and Loss account and Balance Sheet with simple adjustments (Simple problems)

Tally ERP 9.0: Introduction - Create a company - Create ledger - Posting vouchers - Advantages of Tally.

Total Periods: 45

EXPERIENTIAL LEARNING

1. Prepare the Journal Entries by the students with practical examples.
2. Conduct an event about the market structure.
3. Do the problems on Financial Statements with practical examples.
4. Prepare a report regarding the demand and supply of electric vehicles in the Indian market.
5. From the following balances of Mr. Aravind as at 31.12.2016, prepare Trading, Profit and Loss Account for the year ended and Balance Sheet as at that date after making the necessary adjustments.

Debit Balances	Amount (Rs.)	Credit Balances	Amount (Rs.)
Drawing Account	6,000	Capital	80,000
Plant and Machinery	25,000	Sundry Creditors	10,000
Stock (opening)	15,000	Sales	1,20,000
Purchases	82,000	Returns outwards	1,000
Return Inwards	2,000	R.B.D.D.	400
Sundry Debtors	20,600	Discounts	800
Furniture & Fixtures	5,000	Rent of Premises sublet	1,200
Freight and Duty	2,000	Reserve Fund	5,000
Carriage outwards	500		
Rent, Rates & Taxes	4,600		
Printing & Stationery	800		
Trade Expenses	400		
Postage and Telegrams	800		
Insurance charges	700		
Salaries and Wages	21,300		
Cash in Hand	6,200		
Cash at Bank	25,500		
	2,18,400		2,18,400

Adjustments:

- Stock on 31.12.2006 was Rs.14,600.
- Write off Rs.600 as bad debts and provide 5% for R.B.D.D.
- Provide for depreciation on furniture 5% & Plant & Machinery at 20%.
- Insurance prepaid was Rs.100.
- Outstanding salaries Rs. 700
- A fire occurred on 25th December 2006 and stock worth Rs.5,000 was destroyed and the insurance company admitted a claim for Rs. 4500 only.

(Note: It's an indicative one. Course Instructor may change activities and shall be reflected in course Handout)

22MG101401	ESSENTIALS OF LEADERSHIP	2	-	-	-	2
Pre-Requisite	-					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION: This course is designed for learners who desire to improve their leadership, communications, and workplace skills.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Differentiate between leadership and management
- CO2.** Identify the values common among great leaders.
- CO3.** Discuss the power of positive expectations and how to apply it as a leader
- CO4.** Assess what, how, and to whom you should delegate.
- CO5.** Describe what it means to be an ethical leader.

CO-PO Mapping Table:

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	1	-	-	-	1	-	-	-	-	-	-

Course Correlation Mapping	2	2	2	1	1	1	-	-	-	2	2	-

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1: INTRODUCTION (06 Periods)

What is leadership, leadership vs management, leadership and change, Maxwell's 5 levels of leadership, how to move to the next level

Module 2: LEADERSHIP VALUES & EXPECTATIONS (06 Periods)

14 Leadership Values, what matters most exercise. Expectations, The Pygmalion Effect, impact of positive expectations, setting expectations

Module 3: DELEGATION (06 Periods)

Definition, why delegate, delegate/empower, why people don't delegate, steps for delegation - the IDEALS model..

Module 4: ETHICS (06 Periods)

Definitions, introduction to ethics, ethics vs morals, self-assessment, Good People, Bad Choices examples, how to be an ethical leader, 8 Ethical Actions for Leaders.

Module 5: COMMITMENT (06 Periods)

Introduction, significance of commitment, Universal Laws of Leadership, tips towards being accountable and committed leader.

Total Periods:30

EXPERIENTIAL LEARNING

LIST OF EXPERIMENTS:

1. Collect the case studies related to successful leaders and their traits.
2. Different Case Studies Will be Given to students as per the topic that will be collected and evaluated.
3. The case studies will be collected as Assignments and the same will be evaluated.

(Note: It's an indicative one. Course Instructor may change activities and shall be reflected in course Handout)

22MG101402	ORGANIZATIONAL BEHAVIOUR	2	-	-	-	2
Pre-Requisite	-					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION: This course enables the students to know the principles in an organization, the system and process of effective controlling in the organization.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1** Interpret the scope of organizational behavior and its significance.
- CO2** Understand the managerial strategies in achieving the organizational goals of an organization
- CO3** Demonstrate the impact of motivation and leadership on group dynamics.
- CO4** Solve organizational conflicts through negotiation and team building.
- CO5** Improve the results – performance outcome through human behavior and organizational behaviour can aid them in their pursuit of the goals.

CO-PO Mapping Table:

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	2	-	-	-	2	-	2	-	2	-	2

Course Correlation Mapping	2	2	2	3	2	2		2		2	2	2

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1: INTRODUCTION

(06 Periods)

Nature and scope – Linkages with other social sciences- Individual roles and organizational goals–perspectives of human behavior- Perception– perceptual process

Module 2: LEARNING

(06 Periods)

Learning - Learning Process- Theories- (Pavlov, Skinner and Thorndike) - Personality and Individual Differences -Determinants of Personality-Values, Attitudes and Beliefs.

Module 3: MOTIVATION AND LEADERSHIP**(06 Periods)**

Definition and nature of motivation, Theories of Motivation (Maslow, Alderfer) - Leadership - Traits - Styles - Leadership skills - Challenges to leaders.

Module 4: ORGANIZATIONAL CONFLICTS**(06 Periods)**

causes and consequences - conflict and Negotiation Team Building, Conflict Resolution in Groups and problem solving Techniques.

Module 5: ORGANIZATIONAL COMMUNICATION**(06 Periods)**

Communication, types and process, importance and barriers - Organizational change - change process - resistance to change - Organizational development and OD interventions.

Total Periods: 30**EXPERIENTIAL LEARNING****LIST OF EXPERIMENTS:**

1. Collect the case studies related to recent topics in OB and other Contemporary OB Practices and Present them as a seminar.
2. Different Case Studies Will be Given to students as per the topic that will be collected and evaluated.
3. The case studies will be collected as Assignments and the same will be evaluated.

(Note: It's an indicative one. Course Instructor may change activities and shall be reflected in course Handout)

Course Correlation Mapping	2	2	2	2	1	1	2	1	1	-	2	-

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1: INTRODUCTION

(05 Periods)

Concept of project management, project definition and key features of projects, project life cycle phases, typical project management issues, basic project activities

Module 2: PROJECT IDENTIFICATION AND SELECTION

(06 Periods)

Identification and screening (brainstorming, strength and weakness in the system, environmental opportunities and threats), Project evaluation methods- Payback period, Net present value, Internal rate of return and project evaluation under uncertainty.

Module 3: PROJECT RESOURCE MANAGEMENT**(07 Periods)**

Scheduling resources, resource allocation methods, project crashing and resource leveling, working of systems, design of systems, project work system design, project execution plan, project procedure manual project control system, planning scheduling and monitoring

Module 4: TIME AND COST MANAGEMENT**(05 Periods)**

Time Management-Network diagram, forward and backward pass, critical path, PERT and CPM, AOA and AON methods, tools for project network, Cost management-earned value method

Module 5: RISK AND QUALITY MANAGEMENT**(07 Periods)**

Risk identification, types of risk, risk checklist, risk management tactics, risk mitigation and contingency planning, risk register, communication management, Quality assurance and quality control, quality audit, methods of enhancing quality

Total Periods: 30**EXPERIENTIAL LEARNING**

1. Refer to any video lecture on project evaluation methods and give a brief seminar using PPT
2. Select any company wherein you will get the details of activities and time and draw the project network diagram and submit a report.

3.

Activity	Predecessor Activity	Normal Time (Weeks)	Crash Time (Weeks)	Normal Cost (Rs.)	Crash Cost (Rs.)
A	-	4	3	8,000	9,000
B	A	5	3	16,000	20,000
C	A	4	3	12,000	13,000
D	B	6	5	34,000	35,000
E	C	6	4	42,000	44,000
F	D	5	4	16,000	16,500
G	E	7	4	66,000	72,000
H	G	4	3	2,000	5,000

Determine a crashing scheme for the above project so that the total project time is reduced by 3 weeks

4. Collect any case study that discusses the process of probability calculation of success of the project and submit a report

(Note: It's an indicative one. Course Instructor may change activities and shall be reflected in course Handout)

22LG107601	PROFESSIONAL ETHICS AND HUMAN VALUES	2	-	-	-	2
Pre-Requisite	-					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION: This course deals with personal conviction, and ethics and describes the accepted principles and standards of conduct regarding moral duties and virtues as applied to an organization. Codes of professional ethics guide the stakeholders of an organization about the desirable and undesirable acts related to the profession.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1** Demonstrate the principles of ethics, professional values, and social responsibility
- CO2** Analyze the problems in the implementation of moral autonomy and use ethical theories in resolving moral dilemmas
- CO3** Develop suitable strategies to resolve problems that arise in practicing professional ethics and Industrial standards
- CO4** Function as a member, consultant, manager, advisor and leader in multi-disciplinary teams
- CO5** Provide solutions to complex problems associated with professional ethics using analysis and interpretation

CO-PO Mapping Table:

Course Outcomes	Program Outcomes												Program Specific Outcomes

Course Correlation Mapping	2	3	-	-	2	2	2	2	2	-	3	-	1	1	1	1

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1: PROFESSIONAL ETHICS

(06 Periods)

Scope and aim of ethics, Senses of ethics, Variety of moral issues, Types of inquiry, Moral dilemmas, Moral autonomy-Kohlberg's theory, Gilligan's theory, Consensus, and controversy.

Module2: PROFESSIONAL IDEALS AND VIRTUES

(06 Periods)

Theories on virtues and ideals, Professions, Professionalism, Characteristics, Expectations, Professional responsibility, Integrity, Self-respect, Sense of responsibility, Self-interest, Customs and religion, Self-interest and ethical egoism, Customs and ethical relativism, Religion and divine command ethics, Use of ethical theories, Resolving moral dilemmas and moral leadership.

Module 3: SOCIAL EXPERIMENTATION

(06 Periods)

Experimentation, Similarities to standard experiments, Learning from the past and knowledge gained, responsible experimenters, Conscientiousness, Moral autonomy and accountability, The challenger case, Codes of ethics and limitations, Industrial standards and Problems with the law of engineering.

Module 4: RESPONSIBILITIES AND RIGHTS

(06 Periods)

Collegiality and loyalty, Respect for authority, Collective bargaining, Confidentiality, Conflict of interests, Occupational crime, Rights of engineers, Professional rights, Whistle-blowing, The BART case, Employee rights, and discrimination.

Module 5: HARMONY WITH PROFESSIONALETHICS

(06 Periods)

Acceptance of human values; Ethical Human Conduct; Basis for Humanistic Education, Constitution, and Universal Order; Competence in professional ethics; Case studies: Holistic technologies, Management Models and Production Systems; Transition from the present state to Universal Human Order: socially and ecologically responsible engineers, technologists and managers - enriching institutions and organizations.

Total Periods: 30

EXPERIENTIAL LEARNING

1. Demonstrate orally using your experiences of what is naturally acceptable in a relationship – Feeling of respect or disrespect and what is naturally acceptable is to nurture or exploit others.
2. Identify community partners and discuss with a community partner or organization. Prepare a report by identifying and analysing the issues or opportunities.
3. Field experiences may be directed to include a range of time-intensive endeavours that require varying levels of student interaction. Prepare a report on visiting a Juvenile home.
4. Students read a speech in the classroom by former United Nations Secretary-General Kofi Annan on human values.
5. Students are encouraged to bring a daily newspaper to class or to access any news related to the need for human values and note down the points.
6. Bring out the relevance of engineering ethics theory and practice with relevance to current trends.
7. Professional ideals and virtues are important to everyone. Prepare a case study on the professional ideals and virtue of any one of the famous sports personalities from India.
8. Compare the present to the past in engineering experimentations concerning the change in professionalism.
9. Make a study on occupational crime and the role of modern technology in finding solutions.

10. Prepare a case study on how to maintain harmony with different cultural people using professional ethics.

(It's an indicative one. The course instructor may change the activities and the same shall be reflected in Course Handout)

RESOURCES

TEXT BOOKS:

1. Gaur R R, Sangal R & G P Bagaria, *Human Values and Professional Ethics*, Excel Books, New Delhi, 2010.

22CE107601	ENVIRONMENTAL SCIENCE	2	-	-	-	2
Pre-Requisite	-					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION: This course provides a detailed discussion on natural resources, ecosystems, biodiversity, environment pollution and control, social issues and environment, human population and environment.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Analyze natural resources to solve complex environmental problems and natural resource management considering society, environment and sustainability.
- CO2.** Analyze ecosystems and biodiversity to solve complex environmental problems by following environmental ethics considering society, environment and sustainability besides communicating effectively in graphical form.
- CO3.** Analyze various types of pollution and their control measures to solve environmental problems through appropriate tools and techniques following latest developments considering society, ethics, environment and sustainability.
- CO4.** Analyze social issues and its impact on environment, environmental acts to solve complex environmental problems considering society, environment and sustainability besides communicating effectively in graphical form.
- CO5.** Analyze human population and its impact on environment to solve complex environmental problems through team work and using appropriate tools and techniques considering ethics, society, environment and sustainability.

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1: NATURAL RESOURCES

(07 Periods)

Multidisciplinary nature of environment; Natural Resources: Renewable and non-renewable resources; Forest, Water, Mineral, Food and Energy resources -Causes, Effects, Remedies, Case studies; Role of an individual in conservation of natural resource and equitable use of resources for sustainable lifestyles.

Module 2: ECOSYSTEMS AND BIODIVERSITY

(07 Periods)

Ecosystems: Concept of an ecosystem, Structure and function of an ecosystem - Producers, Consumers, Decomposers; Food chains, Food webs, Ecological pyramids – Types; Characteristic features, Structure and functions of forest ecosystem, Desert ecosystem, Aquatic ecosystem.

Biodiversity: Concept and value of biodiversity, Role of biodiversity in addressing new millennium challenges, Hot spots of biodiversity, Threats to biodiversity, Man-wild life conflicts, Endemic, Endangered and extinct species of India, Conservation of biodiversity – In-situ and ex-situ.

Module 3 ENVIRONMENTAL POLLUTION AND CONTROL

(06 Periods)

Causes, Adverse effects and control measures of pollution - Air pollution, Water pollution, Soil pollution, Noise pollution, Thermal pollution, Nuclear pollution, Solid waste management – Urban waste, industrial waste; Latest developments in pollution control, Hazards and disaster management – Floods, Earthquakes, Tsunamis, Case studies.

Module 4 SOCIAL ISSUES AND THE ENVIRONMENT

(06 Periods)

Sustainable development, Urban problems related to energy, Environmental ethics –Issues, Solutions; Global warming, Acid rain, Ozone layer depletion, Nuclear accidents and case studies, Wasteland reclamation, Consumerism and waste products, Concept of green technologies, Environment justice: National Green Tribunal and its importance; Environment protection act, Air act, Water act, Wildlife protection act, Forest conservation act, Issues involved in enforcement of environmental legislation, Public environmental awareness.

Module 5 HUMAN POPULATION AND THE ENVIRONMENT

(04 Periods)

Population growth, Population characteristics and variation among nations, Population explosion, Family welfare programme, Environment and human health, Human rights, Value education, HIV/AIDS, Women and child welfare, Role of information technology in environment and human health; Case studies - Field Work/Assignment/Seminar on Environmental assets – Water bodies/Forest/Grassland/Hill/Mountain.

Total Periods: 30

EXPERIENTIAL LEARNING

1. Visit a nearby villages and know the status of availability of local resources that can be improved through proper education.
2. Make an awareness program in the villages for the development of natural resources, ecosystems and biodiversity.
3. Prepare a document by visiting a local urban waste dumping yard near to the Tirupati city.
4. Visit a local village and find a barren land and make the land into a useful land by planting plants or providing the soil and fertilizers required to improve the soil.
5. Visit a local zoological park and identify the species variety and variability.

(It's an indicative one. The Course Instructor may change the activities and the same shall be reflected in Course Handout)

Co-Requisite	-					

COURSE DESCRIPTION: This course provides a detailed discussion on disasters, earthquakes, floods, cyclones, droughts, landslides and disaster management.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO5.** Analyze the vulnerability of an area to natural and man-made disasters/hazards as per the guidelines to solve complex problems using appropriate techniques ensuring safety, environment and sustainability.
- CO6.** Propose appropriate mitigation strategies for earthquake and tsunami impacts as per code of practice using suitable techniques ensuring safety, environment and sustainability besides communicating effectively in graphical form.
- CO7.** Analyze the causes and impacts of floods, cyclones and droughts using appropriate tools and techniques and suggest mitigation measures ensuring safety, environment and sustainability besides communicating effectively in graphical form.
- CO8.** Analyze the causes and impacts of landslides using appropriate tools and techniques and suggest mitigation measures ensuring safety, environment and sustainability.
- CO9.** Design disaster management strategies to solve pre, during and post disaster problems using appropriate tools and techniques following the relevant guidelines and latest developments ensuring safety, environment and sustainability besides communicating effectively in graphical form.

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1: **DISASTERS**

(06 Periods)

Types of disasters - Natural disasters; Impact of disasters on environment, infrastructure and development; Concepts of hazards and vulnerability analysis, Hazard Assessment, Guidelines for hazard assessment and vulnerability analysis, Basic principles and elements of disaster mitigation.

Module 2: **EARTHQUAKES**

(06 Periods)

Introduction to earthquake, Intensity scale (MSK-64), Seismic zones and activity in India, Action plan for earthquake disaster preparedness, Elements at risk, Recovery and rehabilitation after earthquake, Concepts of Earthquake resistant design and construction of buildings; Tsunami – Onset, Types and causes, Warning, Elements at risk, Typical effects, Specific preparedness and mitigation strategies, Case studies.

Module 3: **FLOODS, CYCLONES AND DROUGHTS**

(07 Periods)

Floods and Cyclones: Onset, Types, Causes, Warnings, Elements at risk, Typical effects, Indian floods and cyclones, Hazard zones, Potential for reducing hazards, Mitigation strategies and community based mitigation, Case studies.

Droughts: Onset, Types and warning; Causes, Impact, Early warning and response mechanisms, Mitigation strategies, Droughts in India, Case studies.

Module 4: **LANDSLIDES**

(06 Periods)

Onset, Types and warning; Causes, Elements at risk, Indian landslides, Hazards zones, Typical effects, Mitigation strategies and community based mitigation, Case studies.

Module 5: **DISASTER MANAGEMENT**

(05 Periods)

Disaster management organization and methodology, Disaster management cycle, Disaster management in India – Typical cases and Cost-benefit analysis, Disaster management programs implemented by NGOs and Government of India, Usage of GIS and Remote sensing techniques in disaster management, Leadership and Coordination in Disaster management, Emerging trends in disaster management.

Total Periods: 30

EXPERIENTIAL LEARNING

1. Perform hazard assessment and vulnerability analysis for any nearby town/city and prepare a detailed report of possible impacts of various disasters on environment, infrastructure and development.
2. Prepare a detailed report on the causes and effects of Tsunami that was occurred in the year 2004. Also discuss various advancements in Tsunami warning systems.
3. Identify the major causes of urban floods in cities like Chennai, Hyderabad & Mumbai and submit a report along with various mitigation strategies to reduce the impact of floods.
4. Prepare a detailed report on how various man-made activities are directly/indirectly related to the occurrence of landslides that occurred in recent days in India.
5. Visit AP State Disaster Response and Fire Services Department and record about various methods used by them in mitigating disasters and their management.

Course Correlation Mapping	2	3	-	3	2	1	2	1	-	1	-	1

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1: INTRODUCTION TO RURAL DEVELOPMENT

(06 Periods)

India - Technology and rural development, Pre and post independence period, Rural India Life, Indian farmer, Role of science and technology in rural development, Rural technology and poverty eradication, Rural business hubs, Technology in improving rural infrastructure, Various organizations related to innovation, Issues of technology transfer - CAPART, NABARD, CSIR, NIF.

Module 2: NON CONVENTIONAL ENERGY

(06 Periods)

Definition of energy, Types of alternative sources of energy, Sources of non conventional energy – Solar energy: Solar pump in agriculture, Solar dryer, Solar cooker, Solar heater; Biogas, Recycling and management, Wastes conservation, Assessment and production of biomass products and their utilization.

Module 3: TECHNOLOGIES FOR RURAL DEVELOPMENT

(06 Periods)

Food and agro based technologies, Tissue culture, Nursery, Building and construction technologies, Cultivation and processing of economic plants, Cottage and social industries, Latest developments in rural technologies.

Module 4: COMMUNITY DEVELOPMENT

(06 Periods)

Water conservation, Rain water Harvesting, Drinking water Standards and simple treatments used, Environment and Sanitation, Bio fertilizers, Medical and aromatic plants, Employment generating technologies – Apiculture, Pisciculture, Aquaculture.

Module 5: IT IN RURAL DEVELOPMENT

(06 Periods)

Role of information technology (IT) in rural areas, Impact of IT in rural development, Need and necessity of technology, Corporate social responsibilities, Private sector participation (Activities in different spheres: Employment, Education, Health, Agriculture and service sectors) and Saansad Adarsh Gram Yojana (SAGY), Village adoption schemes.

Total Periods: 30

EXPERIENTIAL LEARNING

1. Visit a nearby village and know the status of small scale industries which are implanted and to be established based on the availability of the local resources.
2. Visit a local village and make an awareness program on energy utilization using biomass products.
3. Make a awareness program in the villages for the rural development in terms of home-made products.
4. Construct rain water harvesting structures in nearby villages where water scarcity is more and prepare a document.
5. Develop a small IT application the village area which will be used for the growth of the village.

(It's an indicative one. The Course Instructor may change the activities and the same shall be reflected in Course Handout)

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1: FUNCTIONAL ENGLISH

(06 Periods)

Concepts of Functional Spoken English, Self-Introduction; Listening and Speaking: Do's and Don'ts; Expressions: Ability, Admiration, Agreement, Annoyance, Appreciation, Pleasure, Sarcasm, Satisfaction, Surprise, Approval, Certainty, Doubt, Gratitude, Possibility, Fear, Worry, Condolences; Asking for: Advice, Clarification, Direction, Information, Permission; Making: Predictions, recommendations

Module 2: VOCABULARY BUILDING

(06 Periods)

Vocabulary for day-to-day conversations: Vegetables, Groceries, Fruits, Weather, Parts of a Human body, Dresses, Furniture; Relations: Birds, Cries of Animals, Food, Hospitality, Houses, Rooms, Tools, Airport, News Paper, Books, Gems, Corporate Vocabulary, Jobs, Occupations, Diseases; British and American spelling; Slang Words and Technical Jargons.

Module 3: FUNCTIONAL GRAMMAR - I

(06 Periods)

English Grammar and the Indian Student, Parts of Speech, Verb forms: Tenses, Voice and Speech.

Module 4: FUNCTIONAL GRAMMAR -II

(06Periods)

Universal Auxiliaries: Sentence Structure, WH Questions, framing of Questions with answers; Question Tags, Subject and verb agreement, Spotting Errors.

Module 5: COMMUNICATION SKILLS:

(06 Periods)

Polite, Courteous and diplomatic expressions, Good manners and Etiquette, Conversation Techniques, Narrating Stories.

Total Periods: 30

EXPERIENTIAL LEARNING

1. Critically analyse the value of Indian money and its impact on the common man and Prepare a PowerPoint Presentation.
2. Prepare a conversation between you and a sanitary officer regarding sanitary conditions in your locality.
3. The English Language has a rich vocabulary and it increases day by day. Present a seminar on the norms adhered to in adding new words and list out the words added in the last five years with their meaning.
4. Enact roleplays in different situations.
5. Participate in group discussions and debate on present issues
6. A conversation is an exchange of ideas, thoughts, and feelings between two or more persons. Explain it with suitable examples
7. Prepare a schedule and identify various committees to be formed for celebrating the Annual Day of a college and explain team involvement in the celebration.
8. Gather various ideas on discussing with parents the role of higher education and job opportunities.
9. Imagine you see a person wasting water. Write a dialogue objecting to such wastage of natural resources.
10. Since social media offers a wide reach easily, it becomes easier for bullies to spread gossip or issue threats. How do you think Cybercrime is a menace brought about by social media?

1: Low

COURSE CONTENT

Module 1: OVERVIEW OF LIFE SKILLS (06 Periods)

Meaning and significance of life skills, Life skills identified by WHO: Self-awareness, Empathy, Critical thinking, Creative thinking, Decision making, problem-solving, Effective Communication, interpersonal relationships, coping with stress, coping with emotion.

Ethics, Moral & Professional Values: Human Values, Civic Rights, Engineering Ethics, Engineering as Social Experimentation, Environmental Ethics, Global Issues, Code of Ethics like ASME, ASCE, IEEE.

Module 2: STRESS MANAGEMENT (06 Periods)

Stress Management: Stress, reasons, and effects, identifying stress, stress diaries, the four A's of stress management, techniques, **Approaches:** action-oriented, emotion-oriented, acceptance oriented, resilience, Gratitude Training, **Coping with emotions:** Identifying and managing emotions, harmful ways of dealing with emotions, PATH method, and relaxation techniques.

Module 3 TRANSFORMATIONAL SKILLS (06 Periods)

Creativity, Critical Thinking, Collaboration, Problem Solving, Decision Making, Need for Creativity in the 21st century, Imagination, Intuition, Experience, Sources of Creativity, Lateral Thinking, Myths of creativity, Critical thinking Vs Creative thinking, Functions of Left Brain & Right brain, Convergent & Divergent Thinking, Critical reading & Multiple Intelligence.

Module 4 GROUP AND TEAM DYNAMICS (06 Periods)

Introduction to Groups: Composition, formation, Cycle, thinking, Clarifying expectations, Problem Solving, Consensus, Dynamics techniques, Group vs Team, Team Dynamics, and Virtual Teams. Managing team performance and managing conflicts, Intrapreneurship.

Module 5 LEADERSHIP (06 Periods)

Leadership framework, entrepreneurial and moral leadership, vision, cultural dimensions. Growing as a leader, managing diverse stakeholders, crisis management. Types of Leadership, Traits, Styles, VUCA Leadership, Levels of Leadership, Transactional vs Transformational Leaders, Leadership Grid, Effective Leaders.

Total Periods: 30

EXPERIENTIAL LEARNING

1. Prepare an attitude test and measure the attitudes of your class.
2. Prepare a Case study on the Campus Interview pressure and stress of students using SWOT analysis.
3. Record and prepare videos of various cultural people and make a comment on their accents.
4. Prepare a short film of a leader of your choice and list out the best qualities.
5. Prepare a presentation on the impact of social media on leadership management.
6. 'Knowledge of present technologies helps us to live a harmonious life.'
Make a video to justify the statement.
7. Identify life skills needed in our day-to-day life and explain their importance.
8. Come up with strategies to become successful in professional life.

9. Find methods and solutions to overcome the self-pity of a person.
10. Identify the persons who are irregular to class. Find out their problems and come up with solutions.

(Note: It's an indicative one. Course Instructor may change activities and shall be reflected in course Handout)

COURSE DESCRIPTION: To sensitize students on the prospects, opportunities, and challenges in entrepreneurship and the potential for value creation from prospective idea

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1** Understand the basics of generating new business ideas
- CO2** Explain the concept of design thinking and product innovation.
- CO3** Illustrate the roles of digital technology in entrepreneurship.
- CO4** Understand the need for startup economics and market conditions
- CO5** Evaluate the reasons for successful entrepreneurship.

CO-PO Mapping Table:

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	1	2	1	-	-	-	-	-	-	-	-
CO2	1	1	1	-	-	-	-		1			-
CO3	2	2	1	-	-	-	-	1	-	-	2	
CO4	3	1	1	-	-	-	-	-	-	-	-	1
CO5	2	2	-	-	-	1	-	-	-	-	-	1
Course Correlation Mapping	2	2	1	1	-	1	-	1	1	-	2	1

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1: INTRODUCTION

(06 Periods)

Concept & Definition, Taking product or service ideas to creating value: Why should one choose to become an entrepreneur, Entrepreneurial mind-set, Intrapreneurship

Module 2: PRODUCT INNOVATION

(06 Periods)

Product innovation process, engineering design process and the concept of frugal engineering for developing innovative affordable products, effective user-interface.

Module 3: DIGITAL TECHNOLOGY ENTREPRENEURSHIP (06 Periods)

Industry 4.0 landscape and innovations using digital technologies like AI, IOT, AR/VR, Cloud, SAAS, User Applications.

Module 4: STARTUP ECONOMICS & MARKET CONSIDERATIONS (06 Periods)

Economic consideration for starting a venture, Understanding Feasibility analysis, Understanding market, targeting customer and positioning product

Module 5: SUCCESSFUL BUSINESS INCUBATION (06 Periods)

Business model innovation, Business process management , competitive advantages, Business model canvas, Bootstrapping.

Total Periods: 30

EXPERIENTIAL LEARNING

1. Create and present a prototype of a new product of your choice.
2. Present at least three cases of successful business Ideas in recent times
3. Discuss in the group Entrepreneurship opportunities in terms of Orientation and Develop mentation.

(Note: It's an indicative one. Course Instructor may change activities and shall be reflected in course Handout)

22EE107601	INTELLECTUAL PROPERTY RIGHTS	2	-	-	-	2
Pre-Requisite	-					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION: The course is designed to provide comprehensive knowledge to the students regarding the general principles of intellectual property rights, Concepts and Theories, Criticisms of Intellectual Property Rights, and International Regime Relating to IPR. The course provides awareness on how to protect one's unique creation, claim ownership, knowledge of what falls under the purview of someone's rights and what doesn't, and safeguard their creations and gain a competitive edge over their peers.

COURSE OUTCOMES: *After successful completion of the course, students will be able to:*

- CO1** Understand the need and the concepts of intellectual property right and avenues for filling intellectual property rights.
- CO2** Understand the legislative practices and protocols for the acquisition of trademarks and the judicial consequences for violating laws of trademark protection.
- CO3** Understand the legislative practices and protocols for the acquisition of copyrights and the judicial consequences for violating laws of copyright protection.
- CO4** Understand the fundamentals of patent laws, legislative practices, and protocols for acquisition of trade secrets and the judicial consequences for violating laws of trade secrets protection.
- CO5** Understand the importance of geographical indications and various laws and protocols for protecting geographical indications.

CO-PO Mapping Table:

CO5	3	-	-	-	1	-	-	3	-	-	-	2
Course Correlation Level	3	-	-	-	1	-	-	3	-	-	-	2

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1: INTRODUCTION TO INTELLECTUAL PROPERTY RIGHTS (06 Periods)

Introduction and the need for intellectual property rights (IPR); types of intellectual property- Design; International organizations, agencies, and treaties.

Module 2: TRADEMARKS (06 Periods)

Introduction to trademark, Purpose, and function of trademarks, acquisition of trademark rights, protectable matter, selecting and evaluating trademark, trademark registration processes.

Module 3: LAW OF COPYRIGHTS (06 Periods)

Fundamental of copyright law, originality of material, rights of reproduction, rights to perform the work publicly, copyright ownership issues, copyright registration, a notice of copyright, and international copyright law.

Law of patents: Foundation of patent law, patent searching process, ownership rights and transfer.

Module 4: TRADESECRETS (06 Periods)

Trade secret law, determination of trade secret status, liability for misappropriations of trade secrets, protection for submission, trade secreete litigation.

Unfair competition: Misappropriation right of publicity, false advertising.

Module 5: GEOGRAPHICAL INDICATIONS (06 Periods)

The Geographical indications law in India, The objectives and features, the registry of geographical indications powers and functions. Types of goods offered. Protection: Agriculture goods, manufactured goods, and natural goods. Registration of indications and the requirements. Prohibition of misleading use of indications of geographical origins, prohibition of dilution of geographical origins.

Total Periods: 30

EXPERIENTIAL LEARNING

1. Should conduct a survey based on the real scenario, where IPR is misused or unethically used and present an article.
2. Prepare an article on the registration processes of IPR practically (copy right/trade mark/ patents).
3. Should study a case of conflict on trademarks/patents and should produce an article mentioning the circumstances and remedial measures.
4. Prepare an article on the latest development in the international intellectual property rights.

(Note: It's an indicative one. Course Instructor may change activities and shall be reflected in course Handout)

22EE107602	FUNDAMENTALS OF RESEARCH METHODOLOGY	2	-	-	-	2
Pre-Requisite	-					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION: The course is developed for the students to understand the underlying concepts of research methodology and a systematic approach for carrying out research in the domain of interest. The course is emphasized on developing skills to recognize and reflect on the strength and limitations of different types of research; data collection methods, and methods of Processing and analyzing data. The course also emphasizes interpreting the findings and research articulating skills.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1** Understands the underlying concepts of research methodology, types of research and the systematic research process.
- CO2** Understand the philosophy of research design, types of research design and develop skills for a good research design.
- CO3** Understand the philosophy of formulation of a research problem, methods of data collection, review of literature and formulation of working hypothesis.
- CO4** Understand various data processing and analyzing techniques and their significance in the research.
- CO5** Develop skills to interpret the findings and research articulating skills along with the ethics of research.

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1: INTRODUCTION TO RESEARCH METHODOLOGY (06 Periods)

Meaning of Research, Objectives of Research, Motivation in Research, Types of Research, Research Approaches, Significance of Research, Research and Scientific Method, Research Process, Criteria of Good Research.

Module 2: RESEARCH DESIGN (06 Periods)

Research design—Basic Principles, Need of research design, Features of good design, Important concepts relating to research design, Different research designs, Basic principles of experimental designs, Developing a research plan.

Module 3: RESEARCH FORMULATION (06 Periods)

Defining and formulating the research problem - Selecting the problem - Necessity of defining the problem - Importance of literature review in defining a problem – Data collection – Primary and secondary sources; Critical literature review – Identifying gap areas from literature review, Development of working hypothesis.

Module 4: PROCESSING AND ANALYSIS OF DATA (06 Periods)

Processing Operations, Elements/Types of Analysis, Statistics in Research, Measures of Central Tendency, Measures of Dispersion, Measures of Relationship, Simple Regression Analysis.

Module 5: INTERPRETATION AND REPORT WRITING (06 Periods)

Interpretation: Meaning of interpretation; Techniques of interpretation; Precautions in Interpretation.

Report Writing: Significance, Different Steps, Layout, Types of reports, Mechanics of Writing a Research Report, Precautions in Writing Reports.

Total Periods: 30

EXPERIENTIAL LEARNING:

1. Should conduct a survey based on a hypothesis, analyze the data collected and draw inferences from the data.
2. Should review the literature on the given topic and should identify the scope/gaps in the literature and develop a research hypothesis.
3. Should study a case, formulate the hypothesis and identify an appropriate testing technique for the hypothesis.
4. Study an article and submit a report on the inferences and should interpret the findings of the article.

(Note: It's an indicative one. Course Instructor may change activities and shall be reflected in course Handout)

22CS101001	DIGITAL LOGIC DESIGN	3	-	-	-	3
Pre-Requisite	-					
Anti-Requisite	Switching Theory and Logic Design					
Co-Requisite	-					

COURSE DESCRIPTION: This course provides a detailed discussion on Foundations in the operation of digital gates, Concepts of Boolean algebra, Minimization of logic circuits, Design and implementation of combinational and sequential logic circuits, Design digital systems using Programmable logic.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Apply knowledge of binary systems, logic gates and Boolean functions to represent a given problem using Boolean logic.
- CO2.** Minimize and implement Boolean functions to build combinational logic circuits.
- CO3.** Design combinational and sequential logic circuits for digital systems.
- CO4.** Design digital systems using programmable logic to solve engineering problems.

CO-PO-PSO Mapping Table:

Course Outcomes	Program Outcomes												Program Specific Outcomes

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1: BINARY SYSTEMS AND BOOLEAN ALGEBRA (10 Periods)

Introduction, Binary Numbers, Number Base Conversions, Error Detection and Correction, Complements of Numbers, Signed Binary Numbers, Binary Codes, Boolean Algebra, Boolean Functions, Canonical and Standard Forms, Digital Logic Gates.

Module 2: GATE LEVEL MINIMIZATION (09 Periods)

The Map Method, Four Variable K-Map, Product-of-Sums and Sum-of-Products Simplification, Don't Care Conditions, NAND and NOR Implementations, Other Two Level Implementations, Exclusive-OR function.

Module 3: COMBINATIONAL LOGIC (09 Periods)

Combinational Circuits, Analysis of Combinational Circuits, Design Procedure, Binary Adder-Subtractor, Decimal Adder, Binary Multiplier, Magnitude Comparator, Decoders, Encoders, Multiplexers, De-Multiplexers.

Module 4: SEQUENTIAL LOGIC (10 Periods)

Latches, Flip-Flops, Analysis of Clocked Sequential Circuits, Design of Synchronous Sequential Circuits, Registers, Shift Registers, Ripple Counters, Synchronous Counters, Ring Counter and Johnson Counter.

Module 5: PROGRAMMABLE LOGIC (07 Periods)

RAM, ROM, Programmable Logic Array, Programmable Array Logic, Sequential Programmable Devices.

Total Periods: 45

EXPERIENTIAL LEARNING

1. Design the digital circuit system of the vehicle with two photocell sensors, which work as inputs. Simulate the virtual circuit using NI Multisim software considering the following specifications:
 - a) Each side (right of left) of that sensor circuit which communicate with each motor to output the signals so the vehicle can correct the direction along the track and drive. The track is outlined by two LED strip lights, as an input source, on both ends adhered on the ground about one feet apart. For instance, when the vehicle is close to the LED strip lights on the right-side track, the right side of the photocell sensor detects the bright lights, and it sends a positive signal to the left motor. That is, the input of the left photocell logic is 0 (off) because the left sensor does not detect the light and the right photocell logic is 1 (on). The output of the left and right motors in this case are represented as logics 1 and 0 respectively, which makes only the left motor spins to steer to the left side moving away from the right side of LED strip.
 - b) Once the vehicle moves off the light, the both sides of the motors will operate and the vehicle would move straight forward until it encounters another LED strip light. In the case of the left side, the opposite would happen. The left sensor detects the LED strip light on the left side track. Thus, only the right motor will run to make the vehicle to steer to the right side.
 - c) Since two LED strips are far (about 30 cm) apart, both the left and right photocell will not detect the light at the same time. However, it can be defined as negative output for both motors to follow the logics and therefore the vehicle will stop moving.

(It's an indicative one. The Course Instructor may change the activities and the same shall be reflected in Course Handout)

Course Code	Course Title	L	T	P	S	C
22CS102002	PYTHON PROGRAMMING	3	-	2	-	4
Pre-Requisite	-					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION: This course provides a detailed discussion and hands-on experience on Basics of Python programming, Control structures, Sequences, Sets, Dictionaries, Regular expressions, Functions, File handling, Object-oriented programming, Exception handling.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1** Demonstrate knowledge on Python constructs, sequences, sets and dictionaries to solve basic computational problems
- CO2** Apply the concepts of regular expressions for searching patterns in strings
- CO3** Develop and use Python modules to provide solutions to problems
- CO4** Apply the knowledge of file operations in Python for file processing
- CO5** Design applications using object-oriented programming features – encapsulation, inheritance, polymorphism and exception handling
- CO6** Work independently to solve problems with effective communication

COURSE CONTENT

Module 1: INTRODUCTION TO PYTHON PROGRAMMING

(07 Periods)

Introduction to Python, Tokens, Variables, Literals, Identifiers, Keywords, Special symbols, Operators, Fundamental datatypes, Expressions, Type conversions, Handling Input and output in Python.

Module 2: CONTROL STRUCTURES

(08 Periods)

Selection Statements: if statement, if-else statement, if-elif-else statement, nested-if statement.

Iterative Statements: while loop, for loop, break statement, continue statement, pass and else statements used with loops.

Module 3: SEQUENCES, SETS, DICTIONARIES AND REGULAR EXPRESSIONS

(11 Periods)

Sequences: Lists and operations – Creating, Inserting elements, Updating elements, Deleting elements, Searching and sorting, List comprehensions, Nested lists; Tuples – Creating, Searching and sorting, Nested tuples; Strings – Initializing a string and string operations, String handling methods, String formatting.

Sets: Set creation, Set operations.

Dictionaries: Operations on dictionaries, Dictionary methods, Sorting elements using lambdas.

Regular Expressions: Regular expressions, Sequence characters in regular expressions, Quantifiers in regular expressions, Special characters in regular expressions.

Module 4: FUNCTIONS AND FILE HANDLING

(09 Periods)

Functions: Need for functions, Function definition, Function call, Variable scope and lifetime, Return statement, Positional arguments, Keyword arguments, Default arguments and variable length arguments, Recursive functions, Lambda functions, Generators.

File Handling: Types of files, Opening and closing files, Reading and writing data.

Module 5: OBJECT ORIENTED PROGRAMMING AND EXCEPTION HANDLING

(10 Periods)

Object Oriented Programming: Introduction to object-oriented programming, Classes and objects, Inheritance and polymorphism, Abstract Classes and interfaces.

Exception Handling: Errors in a python program, Exceptions, Exception handling, Types of exceptions, Except block, Assert statement, User defined exceptions.

Total Periods: 45

EXPERIENTIAL LEARNING

LIST OF EXERCISES:

Design a python script to perform the various computations for the amount payable by the customer for Challenger Computers Store. A customer buying two numbers of SSD device, one SSD device cost is Rs. 3575/-. The stores offer 15% of the total cost. The customer has to pay 9% CGST, and 9% SGST. Prepare the Net Amount to be payable by the customer.

Design a python script to compute and generate the electricity bill as per the following slab rates. Collect the meter reading inputs, such as current unit and previous unit.

Consumption Units	Rate (in Rupees/Unit)
0-200	3.0
201-250	4.5
251-300	5.2
301-400	6.5
Above 400	7.0

Design a python script to display the sum of numbers divisible by 4. The code must allow the user to accept a number and add it to the sum if it is divisible by 4. It should repeatedly accepting numbers as long as the user wants to provide an input using an appropriate iterative statement and should display the final sum.

Food Corner home delivers vegetarian and non-vegetarian combos to its customer based on order. A vegetarian combo costs Rs.120 per plate and a non-vegetarian combo costs Rs.150 per plate. Their non-veg combo is really famous that they get more orders for their non-vegetarian combo than the vegetarian combo. Apart from the cost per plate of food, customers are also charged for home delivery based on the distance in kms from the restaurant to the delivery point. The delivery charges are as mentioned below:

Distance in kms	Delivery charge in Rs per km
For first 3kms	0
For next 3kms	3
For the remaining	6

Given the type of food, quantity (no. of plates) and the distance in kms from the restaurant to the delivery point, write a python program to calculate the final bill amount to be paid by a customer. The below information must be used to check the validity of the data provided by the customer.

- Type of food must be 'V' for vegetarian and 'N' for non-vegetarian.
 - Distance in kms must be greater than 0.
 - Quantity ordered should be minimum 1.
 - If any of the input is invalid, bill amount should be considered as -1.
- a) A list has the AP City Names [Tirupati, Kurnool, Kadapa]. Design a python script and perform the operations like, add 3 more AP City names Chittoor, Nellore, Guntur, insert Hyderabad in 3rd position, delete any two city names, update all city names as in Uppercase. Displays the list data, whenever an operation completes.
- b) Design a python script for given an integer tuple, for each element in the tuple, check whether there exists a smaller element on the next immediate position of the tuple. If it exists print the smaller element. If there is no smaller element on the immediate next to the element then print -1.
- Example: Input: 4 2 1 5 3 Output: 2 1 -1 3 -1

- a) Sets n1 has the data {1, 3, 5, 7, 9}, n2 has the data {9, 5, 6, 8},
wd1=set(["Mon", "Tue", "Wed", "Thu", "Fri", "Sat", "Sun"]),
wd2=set(["Mon", "Tue", "Wed"]).
Design a python script to perform intersection, difference, and symmetric difference operations on the sets n1 and n2, and to perform superset, and subset operations on the sets wd1, and wd2.
- b) The dictionary city_pin has the data {'Tirupati': 517101, 'Hyderabad': 500002, 'Chittoor': 517001, 'Nellore': 524001}. Design a python script using lambda function to sort the dictionary on city name and produce the output and sort the dictionary on pincode and produce the output.
- c) The string has the data, Wel_str = "Welcome to AI ML DS". Design a python script to search the pattern "AI" using regular expression search and display the three location numbers of the pattern. First shows the pattern starts location, second shows the pattern end location, and the last shows pattern span locations.
- a) Design a python script for the mathematical puzzle, Towers of Hanoi. The puzzle has three rods and n disks. To move the entire stack to another rod, obeying the three rules (i) Only

one disk can be moved at a time, (ii) Each move consists of taking the upper disk from one of the stacks and placing it on top of another stack i.e., a disk can only be moved if it is the uppermost disk on a stack, (iii) No disk may be placed on top of a smaller disk.

- b) Design a python script to display the numbers that do not appear in the Fibonacci series of n numbers where n is given by the user. (If n is 8 then up to 8 Fibonacci numbers has to be printed Ex: 1 1 2 3 5 8 13 21 and in this series missing numbers should be traced and printed, Ex: missing numbers are: 4 6 7 9 10 11 12 14 15 16 17 18 19.
- a) Design a function `Learner_Age_Days` with two formal parameters name, age and it computes Learner's age in days, then displays learners name and age in days.
 - (i) Design a driver code to call the function using positional arguments, keyword arguments
 - (ii) Apply the necessary changes in `Learner_Age_Days` function, and design a driver code to call the function using default arguments.
- b) Design a python script using lambda and filter functions to construct an odd numbers list from numbers 1 to 10, and construct a negative numbers list from range of numbers -7 to 7 and to find the biggest number from a numbers list.
- a) Design a python script to create a new file `Collect_Literals_Python.txt`, collect the data from the keyboard about the contents of collection literals list, tuple, sets, dictionaries details, then write all the data into that file, and then close that file. Afterwards Open the `Collect_Literals_Python.txt` file in read mode, read the entire contents of the file `Collect_Literals_Python.txt`, then display all the contents of that file in monitor.
- b) The file `feat_python1.txt` has the contents of features of the Python programming language. Design a python script to open that file `feat_python1.txt` in read mode, open the new file in `feat_python2.txt` in write mode, then read entire contents of the file `feat_python1.txt`, then copy all the contents of that file into the new file `feat_python2.txt`
- a) Construct a Python script to implement the below requirements. Create a base class `Basic_Info` with data members name, rollno, gender and two member functions `getdata()` and `display()`. Derive a class `Physical_Fit` from `Basic_Info` which has data members height and weight and member functions `getdata()` and `display()`. Display all the information using object of derived class.
- b) Design a Python script to implement the below specifications, compute, and produce required output. Define a class `REPORT` with the following specification

Private members

Admno : 4-digit admission number
 Name : 20 characters
 Marks : A list of 5 floating point values
 Average : average marks obtained
 GETAVG() a function to compute the average obtained in five subjects.

Public members

READINFO() function to accept values for Adno, Name, Marks. Invoke the function GETAVG ().
 DISPLAYINFO() function to display all data members of report on the screen. You should give function definitions. Write driver code to demonstrate all the functions.

- a) The below scenarios will create Logical Error/Exception, and it will forcibly stop the execution in middle of the program. Design a Python Script the to handle these operations exceptions effectively, and avoid to stop the script execution in the middle.
 - i. The variable num has the data 100, the value of num dividing by the value 0.
 - ii. To importing a library file `matheqn`, this library file not available in Python.
 - iii. A num_List has the values [10,20,30].To print the fifth value of num_List[5]
 - iv. A dictionary has the data, Dict_Univ = {'1':"MBU", '2':"Tirupathi", '3':"CSE"}. to print the fifth key value Dict_Univ[5]
- b) Design a python script to collect the 10 students Python course mark. Check that entered mark is negative, then throw a user defined exception called Negative, otherwise store into the mark in the List `Python_mark[]`.

PROGRAM CORE

Course Code	Course Title	L	T	P	S	C
22CS102037	PYTHON ESSENTIALS FOR DATA HANDLING AND WEB INTEGRATION	3	-	2	-	4
Pre-Requisite	-					
Anti-Requisite	Python Programming					
Co-Requisite	-					

COURSE DESCRIPTION: This course offers an introduction to Python programming, covering data types, control structures, functions, and file handling. It includes data structures, object-oriented programming, and exception handling. The syllabus extends to API integration, database operations, web development basics, automation scripts, and data visualization using Python libraries.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Demonstrate proficiency in Python fundamentals, including control structures, functions and IDE usage, to solve basic computational solutions
- CO2.** Apply appropriate data structures and file operations for structured data handling
- CO3.** Design applications using object-oriented programming features – encapsulation, inheritance, polymorphism and exception handling.
- CO4.** Develop database-integrated Python applications with CRUD functionality and interact with external APIs and web data using tools like BeautifulSoup and Selenium.
- CO5.** Create automation scripts and perform data analysis and visualization using python libraries Pandas, NumPy, Matplotlib, and Seaborn.
- CO6.** Work independently to solve problems with effective communication.

CO-PO-PSO Mapping Table:

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1: PYTHON FUNDAMENTALS AND IDE PROFICIENCY (10 Periods)

Python Setup: IDEs VS Code, Jupyter, PyCharm, Environments, Data Types, Variables, Input/Output, Operators, Conditional Statements :if, if-else, nested, Loops :for, while, loop controls, Functions: Modular Code, Parameters, Scope, Basic I/O Projects: Calculator, Voting System, Grade Calculator. Introduction of Debugging tools such as GDB, online IDEs and Code visualization

Module 2: DATA STRUCTURES AND FILE HANDLING**(08 Periods)**

Lists, Tuples, Sets, Dictionaries: CRUD Operations, lambda String Handling and Regular Expressions
Advanced File I/O: Text, CSV, JSON.

Module 3: OBJECT ORIENTED PROGRAMMING AND EXCEPTION HANDLING**(09 Periods)**

Object Oriented Programming: OOP Concepts: Class, Object, Inheritance, Encapsulation
Polymorphism, Method Overriding, Special Methods: init, str, Modules and Packages ,Working with
Date, Time, and OS modules.

Exception Handling: Errors in a python program, Exceptions, Exception handling, Types of
exceptions, Except block, Assert statement, User defined exceptions.

Module 4: APIS, DATABASE & WEB FUNDAMENTALS**(09 Periods)**

Introduction to SQLite/MySQL using Python , CRUD Operations, API Integration using requests, Basics
of Web Scraping: BeautifulSoup, selenium, Working with Flask for Web Application Basics.

Module 5: AUTOMATION AND DATA HANDLING**(09 Periods)**

Automation Scripts: Renaming files, Sending Emails, Scheduling, Introduction to Data Analysis using
Pandas, NumPy, Plotting and Reporting: Matplotlib, Seaborn.

Total Periods: 45**EXPERIENTIAL LEARNING****LIST OF EXERCISES:****(All source code should be maintained and version-controlled on GitHub)**

1)	Python Fundamentals Leetcode: #136. Single Number Given a non-empty array of integers nums, every element appears <i>twice</i> except for one. Find that single one. You must implement a solution with a linear runtime complexity and use only constant extra space. Example 1: Input: nums = [2,2,1] Output: 1 Example 2: Input: nums = [4,1,2,1,2] Output: 4 Example 3: Input: nums = [1] Output: 1 Constraints: • $1 \leq \text{nums.length} \leq 3 * 10^4$ • $-3 * 10^4 \leq \text{nums}[i] \leq 3 * 10^4$ • Each element in the array appears twice except for one element which appears only once. ✓ This problem strengthens understanding of bit manipulation, especially the XOR operation. It helps learners implement space-efficient algorithms with O(1) space complexity. It reinforces the concept of identifying unique elements in arrays using linear time complexity.
	Decision Making and Looping Leetcode: #202. Happy Number Write an algorithm to determine if a number n is happy. A happy number is a number defined by the following process: • Starting with any positive integer, replace the number by the sum of the squares of its digits. • Repeat the process until the number equals 1 (where it will stay), or it loops endlessly in a cycle which does not include 1.

	- Those numbers for which this process ends in 1 are happy. Return true <i>if n is a happy number, and false if not.</i> Example 1: Input: n = 19 Output: true Explanation: $1^2 + 9^2 = 82$ $8^2 + 2^2 = 68$ $6^2 + 8^2 = 100$ $1^2 + 0^2 + 0^2 = 1$ Example 2: Input: n = 2 Output: false Constraints: $1 \leq n \leq 2^{31} - 1$ ✓ This problem enhances understanding of mathematical simulations and cycle detection techniques. It reinforces the use of hashing or fast/slow pointer methods to detect loops in sequences. It is useful for practicing digit-based operations and implementing custom iterative logic.
3)	Voting System Logic Validation (Loops & Conditionals) Use Case: Implement secure and fair vote counting logic with input validations and conditions using loops. LeetCode: Majority Element – LeetCode #169 Given an array nums of size n, return <i>the majority element</i>. The majority element is the element that appears more than $\lfloor n / 2 \rfloor$ times. You may assume that the majority element always exists in the array. Example 1: Input: nums = [3,2,3] Output: 3 Example 2: Input: nums = [2,2,1,1,1,2,2] Output: 2 Constraints: $n == \text{nums.length}$ $1 \leq n \leq 5 * 10^4$ $-10^9 \leq \text{nums}[i] \leq 10^9$ ✓ Helps students understand array-based vote counting, loop optimization, and frequency tracking for decision systems.
4)	Mini Search Engine for Logs (File Handling + Strings + Regex) Use Case: Create a CLI tool to search logs using regex, ideal for inventory systems or real-time alerts. LeetCode: Find All Anagrams in a String – LeetCode #438 Given two strings s and p, return an array of all the start indices of p's anagrams in s. You may return the answer in any order. Example 1: Input: s = "cbaebabacd", p = "abc" Output: [0,6] Explanation: The substring with start index = 0 is "cba", which is an anagram of "abc". The substring with start index = 6 is "bac", which is an anagram of "abc". Example 2: Input: s = "abab", p = "ab"

	Output: [0,1,2] Explanation: The substring with start index = 0 is "ab", which is an anagram of "ab". The substring with start index = 1 is "ba", which is an anagram of "ab". The substring with start index = 2 is "ab", which is an anagram of "ab". Constraints: • $1 \leq s.length, p.length \leq 3 * 10^4$ • s and p consist of lowercase English letters. ✓ Combines file reading, string operations, and pattern matching logic to simulate log monitoring tools.
5)	Design a HashMap without using any built-in hash table libraries. Implement the MyHashMap class: • MyHashMap() initializes the object with an empty map. • void put(int key, int value) inserts a (key, value) pair into the HashMap. If the key already exists in the map, update the corresponding value. • int get(int key) returns the value to which the specified key is mapped, or -1 if this map contains no mapping for the key. • void remove(key) removes the key and its corresponding value if the map contains the mapping for the key. Example 1: Input ["MyHashMap", "put", "put", "get", "get", "put", "get", "remove", "get"] [[], [1, 1], [2, 2], [1], [3], [2, 1], [2], [2], [2]] Output [null, null, null, 1, -1, null, 1, null, -1] Explanation MyHashMap myHashMap = new MyHashMap(); myHashMap.put(1, 1); // The map is now [[1,1]] myHashMap.put(2, 2); // The map is now [[1,1], [2,2]] myHashMap.get(1); // return 1, The map is now [[1,1], [2,2]] myHashMap.get(3); // return -1 (i.e., not found), The map is now [[1,1], [2,2]] myHashMap.put(2, 1); // The map is now [[1,1], [2,1]] (i.e., update the existing value) myHashMap.get(2); // return 1, The map is now [[1,1], [2,1]] myHashMap.remove(2); // remove the mapping for 2, The map is now [[1,1]] myHashMap.get(2); // return -1 (i.e., not found), The map is now [[1,1]] Constraints: • $0 \leq \text{key}, \text{value} \leq 10^6$ At most 10^4 calls will be made to put, get, and remove.
6)	Weather Data Fetcher with API (Flask + API + DB) Use Case: Build a live weather/news app with Flask, SQLite, and REST APIs, parsing and storing real-time data. LeetCode: LRU Cache – LeetCode #146 Design a data structure that follows the constraints of a Least Recently Used (LRU) cache. Implement the LRUcache class: • LRUcache(int capacity) Initialize the LRU cache with positive size capacity. • int get(int key) Return the value of the key if the key exists, otherwise return -1. • void put(int key, int value) Update the value of the key if the key exists. Otherwise, add the key-value pair to the cache. If the number of keys exceeds

	the capacity from this operation, evict the least recently used key. The functions get and put must each run in $O(1)$ average time complexity. Example 1: Input ["LRUCache", "put", "put", "get", "put", "get", "put", "get", "get", "get"] [[2], [1, 1], [2, 2], [1], [3, 3], [2], [4, 4], [1], [3], [4]] Output [null, null, null, 1, null, -1, null, -1, 3, 4] Explanation LRUCache lruCache = new LRUCache(2); lruCache.put(1, 1); // cache is {1=1} lruCache.put(2, 2); // cache is {1=1, 2=2} lruCache.get(1); // return 1 lruCache.put(3, 3); // LRU key was 2, evicts key 2, cache is {1=1, 3=3} lruCache.get(2); // returns -1 (not found) lruCache.put(4, 4); // LRU key was 1, evicts key 1, cache is {4=4, 3=3} lruCache.get(1); // return -1 (not found) lruCache.get(3); // return 3 lruCache.get(4); // return 4 Constraints: • $1 \leq \text{capacity} \leq 3000$ • $0 \leq \text{key} \leq 10^4$ • $0 \leq \text{value} \leq 10^5$ • At most $2 * 10^5$ calls will be made to get and put. ✓ Students simulate data retrieval and caching, ideal for optimizing API usage and rendering web responses efficiently.
7)	Personal Finance Analyzer (Pandas + NumPy + Plotting) Use Case: Analyze personal expenses using CSVs, aggregate trends with NumPy, and visualize with matplotlib. LeetCode: Two Sum – LeetCode #1 Given an array of integers nums and an integer target, return <i>indices of the two numbers such that they add up to target</i>. You may assume that each input would have exactly one solution, and you may not use the <i>same</i> element twice. You can return the answer in any order. Example 1: Input: nums = [2,7,11,15], target = 9 Output: [0,1] Explanation: Because nums[0] + nums[1] == 9, we return [0, 1]. Example 2: Input: nums = [3,2,4], target = 6 Output: [1,2] Example 3: Input: nums = [3,3], target = 6 Output: [0,1] Constraints: • $2 \leq \text{nums.length} \leq 10^4$ • $-10^9 \leq \text{nums}[i] \leq 10^9$ • $-10^9 \leq \text{target} \leq 10^9$ • Only one valid answer exists. ✓ Teaches array manipulation and mapping—core to grouping and visualizing

	expenses or balances in dashboards.
8)	Mini-Project: File-based Inventory System / Log Parser
9)	Mini-Project: Employee Management or Vehicle Rental System
10)	Capstone Project (Choose One): a. Data Analysis Dashboard (Pandas + Flask) b. Personal Expense Tracker (with DB, GUI/Web) Real-Time Weather/News App with API

22AI101001	DISCRETE MATHEMATICAL STRUCTURES	3	-	-	-	3
Pre-Requisite	-					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION: This course provides a detailed discussion on discrete mathematics to make students to think logically and mathematically and apply these techniques in solving problems. Topics include mathematical logic, functions, relations, deterministic algorithms and analysis techniques based on counting methods, recurrence relations, trees and graphs.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Apply mathematical logic and truth tables to validate precise statements.
- CO2.** Understand the concepts of sets, relations and functions.
- CO3.** Analyze and apply the concepts of mathematical induction, counting principles and properties of algebraic structures to solve computational Problems.
- CO4.** Formulate problems and solve recurrence relations using substitution method and generating functions.
- CO5.** Apply trees and graphs to solve the problems in computer applications.

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1: MATHEMATICAL LOGIC AND NORMAL FORMS

(08 Periods)

Mathematical Logic: Introduction, Statements and Notation, Connectives, Well- formed formulae, Truth tables, Tautology, Equivalence, Implications.

Normal forms: Disjunctive normal form, Conjunctive normal form, Principle disjunctive normal form, Principle conjunctive normal form.

Module 2: RELATIONS AND FUNCTIONS

(08 Periods)

Relations: Cartesian product of sets, Relations, Properties of binary relations, Equivalence, Compatibility and Partial ordering relations, Hasse diagram and related applications, Lattices as partially ordered sets, Definition and examples, Properties of Lattices.

Functions: Types of functions, Composition of functions and inverse of functions

Module 3: INDUCTION, COUNTING AND ALGEBRAIC STRUCTURES

(09 Periods)

Induction, Counting: Mathematical Induction – The Basics of Counting - The Pigeonhole Principle - Principle of Inclusion-Exclusion.

Algebraic Structures: Algebraic systems, Examples and general properties, Semi groups and Monoids, Groups, Subgroups, Homomorphism, Isomorphism

Module 4: GENERATING FUNCTIONS AND RECURRENCE RELATIONS

(11 Periods)

Generating Functions: Generating functions of sequences, Calculating coefficients of generating functions.

Recurrence Relations: Recurrence relations, Solving recurrence relations by substitution and generating functions, The method of characteristic roots, Solutions of homogeneous recurrence relations.

Module 5: GRAPHS AND TREES

(09 Periods)

Graphs: Basic concepts of Graph theory, Planar and Complete graph, Matrix representation of Graphs, Graph Isomorphism, Connectivity, Euler and Hamilton Paths, Shortest path algorithms.

Trees: Introduction to Trees, Properties of Trees, Spanning Trees, Depth-First Search, Breadth-First Search, Minimum Spanning Trees.

Total Periods: 45

EXPERIENTIAL LEARNING

The following is the sample. Faculty shall frame according to the course domain.

1. Let $a > 1$ be a positive integer. Pretend you want to divide n people into some number of teams, each of size a or $a + 1$. Show that this is possible provided n is larger than values in the Fibonacci polynomial $a^2 - a - 1 = a(a-1) - 1$.
2. Identify the relations on the set of bits $B = \{0, 1\}$ that are partial orders and those that are equivalence relations.
3. Pretend you are writing traffic accident software and want to categorize accidents by the day of the week on which they occur. Pretend there are n accident reports to categorize.
 - (a) What is the size of the sample space? That is, in how many ways can the n accident reports be distributed over 7 days?
 - (b) In how many ways can all n accidents occur on one single day?
 - (c) In how many ways can all n accidents occur on only two days?
 - (d) Let's look at the other end: In how many ways can all n accidents occur on seven, and no less, days.

(It's an indicative one. The Course Instructor may change the activities and the same shall be reflected in Course Handout)

COURSE DESCRIPTION: This course provides an overview of data structure concepts, arrays, stack, queues, trees, and graphs. Discussion of various implementations of these data objects, programming styles, and run-time representations.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Understand the concept of Dynamic memory management, data types, algorithms, Big O notation.
- CO2.** Understand basic data structures such as arrays, linked lists, stacks and queues.
- CO3.** Solve problem involving graphs, trees and heaps.
- CO4.** Apply Algorithm for solving problems like sorting, searching, insertion and deletion of data.

COURSE CONTENT

MODULE – 1 INTRODUCTION TO DATA STRUCTURES & STACK, QUEUE (10 Periods)

Introduction: Introduction to Data Structures, Basic Concepts and Notations, Abstract Data Types, Analysis and Efficiency of Algorithms, Time and Space Complexity.

Stack, Queue: Stack, Stack operations, Implementation using arrays, applications of stack, Queue, Queue operations, Implementation using arrays, various Queue Structures, applications of queue.

MODULE-2 LINKED LISTS

(08 Periods)

Linked lists: Single linked list, double linked list, circular linked list, operations on linked lists, Applications of Linked List. Implementation of stack using Pointers, Implementation of Queue using Pointers.

MODULE-3 SEARCHING, SORTING & HASH TABLES

(08 Periods)

Searching Techniques: Linear Search, Binary Search and Fibonacci Search.

Sorting Techniques: Selection Sort, Insertion sort, Bubble sort, Merge Sort, Quick Sort, Heap sort, Radix Sort.

Hash Tables: Hash Functions, Collision Handling Schemes, Applications.

MODULE-4 TREES

(10 Periods)

Trees: Vocabulary and Definitions, Binary Tree, Implementation, Binary Tree Traversal, Binary Search Tree, Implementation, Balanced Search Trees: AVL Trees, Implementation, Splay Trees, Red-Black Trees.

MODULE-5 GRAPH THEORY

(09 Periods)

Graph Theory: Graphs Terminology, Graph ADT, Data Structures for Graphs-Adjacency Matrix Structure, Graph Traversals, Shortest Paths, Minimum Spanning Trees- Prim's Algorithm, Kruskal's Algorithm, Dijkstra's Algorithm, Floyd-Warshall Algorithm

EXPERIENTIAL LEARNING

1. Demonstrate recursive algorithms with examples.
2. Develop a program to perform operations of a Stack and Queue using arrays.
3. Implement and perform different operations on Single, Double and Circular Linked Lists.
4. Develop a program to perform operations of Stack and Queue using Linked Lists
5. Develop programs to implement Stack applications.
6. Implement Circular Queues.
7. Implement various Searching techniques.
8. Develop programs for different Sorting techniques
9. Develop a program to represent a Tree data structure.
10. Develop a program to demonstrate operations on Binary Search Tree.
11. Demonstrate Graph Traversal Techniques.
12. Develop a program to find Minimum cost Spanning tree.

PROGRAM CORE

Course Code	Course Title	L	T	P	S	C
22CS102033	INDUSTRY DATA STRUCTURES AND ALGORITHMS	3	-	2	-	4
Pre-Requisite	-					
Anti-Requisite	Data Structures and Algorithms					
Co-Requisite	-					

COURSE DESCRIPTION: This course covers fundamental data structures such as arrays, linked lists, stacks, queues, trees, heaps, and graphs, emphasizing data organization and recursive techniques. It also explores traversal algorithms and sorting methods, along with priority management using heaps.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Apply arrays, linked lists, stacks, queues, and recursion to solve basic data organization problems.
- CO2.** Apply recursion and implement stacks and queues using arrays and linked lists to efficiently solve algorithmic problems.
- CO3.** Develop solutions using binary trees and binary search trees for effective data operations such as insertion, deletion, and traversal.
- CO4.** Design and implement heap structures and sorting techniques to efficiently manage priority-based tasks and optimize data processing.
- CO5.** Create graph data structures and apply BFS and DFS algorithms to solve real-world problems related to navigation, connectivity, and network analysis.
- CO6.** Work independently to solve problems with effective communication.

CO-PO-PSO Mapping Table:

Course Outcomes	Program Outcomes												Program Specific Outcomes			
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3	PSO4

COURSE CONTENT

Module 1: INTRODUCTION TO DATA STRUCTURES, ARRAYS, LINKED LIST (10 Periods)

Data organization concepts: Abstract Data Types (ADT): Importance of data structures in problem solving and algorithm design; Static arrays: Dynamic arrays: Memory layout of arrays; Array operations: Traversal, Insertion, Deletion, Searching, Sorting; Linked list: Singly linked list, Doubly linked list, Circular linked list; Node structure, Memory allocation, Linked list operations: Insertion, Deletion, Traversal, Searching;

Real-world applications of arrays and linked lists, Introduction of Debugging tools such as GDB, Online IDEs and code visualizer

Module 2: RECURSION, STACK, AND QUEUE

(10 Periods)

Recursion fundamentals: Base case and recursive call: Recursive vs iterative approaches; Stack ADT, LIFO principle, Stack operations: Push, Pop, Peek; Implementation using arrays and linked lists, Applications of stack: Expression evaluation (infix to postfix), Parentheses matching, Function call stack; Queue ADT, FIFO principle, Queue operations: Enqueue, Dequeue, Front; Implementation using arrays and linked lists, Circular queue, Priority queue, Concepts and real-time use cases.

Module 3: BINARY TREE AND BINARY SEARCH TREE

(9 Periods)

Introduction to Trees, Terminology: Nodes, Height, Depth; Binary tree structure, Properties of binary trees, Types: Full, Complete, Perfect; Tree traversal techniques: Preorder, Inorder, Postorder; Binary Search Tree (BST): Definition, Properties: BST operations: Insertion, Deletion, Searching; Applications of BST: Efficient searching, Sorting, Lookup-intensive algorithms; Balanced trees, Introduction to AVL trees and Red-Black trees.

Module 4: HEAPS AND SORTING

(8 Periods)

Heaps: Heap definition, Types of heaps: Max-heap, Min-heap, Heap property: Array representation of heaps, Heap operations: Insertion, Deletion, Heapify, Building a heap from an array; Applications: Priority queue implementation, Heap sort algorithm;

Sorting: Bubble sort, Selection Sort, Insertion sort.

Module 5: GRAPHS

(8 Periods)

Graph basics: Definitions; Terminology: Vertices, Edges, Degree; Graph types: Directed, Undirected, Weighted, Unweighted; Graph representation: Adjacency matrix, Adjacency list: Pros and cons of each; Graph traversal algorithms: Breadth-First Search (BFS), Depth-First Search (DFS); Recursive and iterative implementation.

Total Periods: 45

EXPERIENTIAL LEARNING

LIST OF EXERCISES:

(All source code should be maintained and version-controlled on GitHub)

1 INTRODUCTION TO DATA STRUCTURES, ARRAYS, LINKED LIST

Leetcode: [#206. Reverse Linked List](#)

Given the head of a singly linked list, reverse the list, and return *the reversed list*.

Example 1:

Input: head = [1,2,3,4,5]

Output: [5,4,3,2,1]

Example 2:

Input: head = [1,2]

Output: [2,1]

Example 3:

Input: head = []

Output: []

✓ This problem helps students understand how linked lists work and how to manipulate node pointers to reverse data structures — a foundational skill for mastering more advanced operations like palindrome checks, cycle detection, and list partitioning

11) INTRODUCTION TO DATA STRUCTURES, ARRAYS, LINKED LIST

LeetCode: [#19. Remove Nth Node From End of List](#)

Given the head of a linked list, remove the n^{th} node from the end of the list and return its head.

Example 1:

Input: head = [1,2,3,4,5], n = 2

Output: [1,2,3,5]

Example 2:

Input: head = [1], n = 1

Output: []

Example 3:

Input: head = [1,2], n = 1

Output: [1]

Constraints:

- The number of nodes in the list is sz.
- $1 \leq sz \leq 30$
- $0 \leq \text{Node.val} \leq 100$
- $1 \leq n \leq sz$

✓ This problem helps students develop a strong understanding of two-pointer techniques in linked lists, enabling them to perform one-pass solutions efficiently. It also reinforces concepts like pointer manipulation and edge case handling, which are critical for solving interview-level linked list problems.

2 RECURSION, STACK, AND QUEUE

Leetcode: [#155. Min Stack](#)

Design a stack that supports push, pop, top, and retrieving the minimum element in constant time.

Implement the MinStack class:

- MinStack() initializes the stack object.
- void push(int val) pushes the element val onto the stack.
- void pop() removes the element on the top of the stack.
- int top() gets the top element of the stack.
- int getMin() retrieves the minimum element in the stack.

You must implement a solution with $O(1)$ time complexity for each function.

Example 1:

Input

["MinStack","push","push","push","getMin","pop","top","getMin"]

[[],[-2],[0],[-3],[[],[],[],[]]]

Output

[null,null,null,null,-3,null,0,-2]

Explanation

```
MinStack minStack = new MinStack();
```

```
minStack.push(-2);
```

```
minStack.push(0);
```

```
minStack.push(-3);
```

```
minStack.getMin(); // return -3
```

```
minStack.pop();
```

```
minStack.top();    // return 0
```

```
minStack.getMin(); // return -2
```

Constraints:

- $-2^{31} \leq \text{val} \leq 2^{31} - 1$
- Methods pop, top and getMin operations will always be called on **non-empty** stacks.
- At most $3 * 10^4$ calls will be made to push, pop, top, and getMin

✓ This problem helps students understand how to design efficient data structures by extending stack functionality to support constant-time retrieval of the minimum element. It strengthens their knowledge of auxiliary stack usage, time complexity optimization, and problem decomposition—skills that are essential for tackling advanced system design and interview challenges.

3 RECURSION, STACK, AND QUEUE

Leetcode: [#225. Implement Stack using Queues](#)

Implement a last-in-first-out (LIFO) stack using only two queues. The implemented stack should support all the functions of a normal stack (push, top, pop, and empty).

Implement the MyStack class:

- void push(int x) Pushes element x to the top of the stack.
- int pop() Removes the element on the top of the stack and returns it.
- int top() Returns the element on the top of the stack.
- boolean empty() Returns true if the stack is empty, false otherwise.

Notes:

- You must use **only** standard operations of a queue, which means that only push to back, peek/pop from front, size and is empty operations are valid.
- Depending on your language, the queue may not be supported natively. You may simulate a queue using a list or deque (double-ended queue) as long as you use only a queue's standard operations.

Example 1:

Input

```
["MyStack", "push", "push", "top", "pop", "empty"]  
[[], [1], [2], [], [], []]
```

Output

```
[null, null, null, 2, 2, false]
```

Explanation

```
MyStack myStack = new MyStack();  
myStack.push(1);  
myStack.push(2);  
myStack.top(); // return 2  
myStack.pop(); // return 2  
myStack.empty(); // return False
```

Constraints:

- $1 \leq x \leq 9$
- At most 100 calls will be made to push, pop, top, and empty.
- All the calls to pop and top are valid.

✓ This problem helps students understand how to simulate one data structure using another—in this case, implementing a LIFO stack using FIFO queues. It reinforces key computer science concepts such as data structure transformation, queue operations, and trade-offs between time and space complexity, which are essential in system design and technical interviews.

4 BINARY TREE AND BINARY SEARCH TREE

LeetCode: [#404. Sum of Left Leaves](#)

Given the root of a binary tree, return the sum of all left leaves.

A **leaf** is a node with no children. A **left leaf** is a leaf that is the left child of another node.

Example 1:

Input: root = [3,9,20,null,null,15,7]

Output: 24

Explanation: There are two left leaves in the binary tree, with values 9 and 15 respectively.

Example 2:

Input: root = [1]

Output: 0

Constraints:

- The number of nodes in the tree is in the range [1, 1000].
- $-1000 \leq \text{Node.val} \leq 1000$

✓ This problem helps students practice binary tree traversal techniques, especially recursion and DFS. It teaches how to identify and process specific node types, like left leaves. This forms the basis for solving more advanced subtree and path-related tree problems.

5 BINARY TREE AND BINARY SEARCH TREE

Leetcode: [#700. Search in a Binary Search Tree](#)

You are given the root of a binary search tree (BST) and an integer val. Find the node in the BST that the node's value equals val and return the subtree rooted with that node. If such a node does not exist, return null.

Example 1:

Input: root = [4,2,7,1,3], val = 2

Output: [2,1,3]

Example 2:

Input: root = [4,2,7,1,3], val = 5

Output: []

Constraints:

- The number of nodes in the tree is in the range [1, 5000].
- $1 \leq \text{Node.val} \leq 10^7$
- root is a binary search tree.
- $1 \leq \text{val} \leq 10^7$

✓ This problem helps students understand the properties of Binary Search Trees (BSTs).

It strengthens their ability to use recursive or iterative techniques to search efficiently. This forms a foundation for advanced BST operations like insert, delete, and range queries

6 HEAPS AND HASHING

Leetcode: [#383. Ransom Note](#)

Given two strings ransomNote and magazine, return true if ransomNote can be constructed by using the letters from magazine and false otherwise. Each letter in magazine can only be used once in ransomNote.

Example 1:

Input: ransomNote = "a", magazine = "b"

Output: false

Example 2:

Input: ransomNote = "aa", magazine = "ab"

Output: false

Example 3:

Input: ransomNote = "aa", magazine = "aab"

Output: true

Constraints:

- $1 \leq \text{ransomNote.length}, \text{magazine.length} \leq 10^5$
- ransomNote and magazine consist of lowercase English letters.

✓ This problem helps students practice string manipulation and character frequency counting. It introduces efficient ways to handle character usage constraints using hash maps or arrays. It builds foundational skills for solving text validation and resource allocation problems.

7 HEAPS AND HASHING

Leetcode: [#1358. Number of Substrings Containing All Three Characters](#)

Given a string s consisting only of characters a, b and c.

Return the number of substrings containing **at least** one occurrence of all these characters a, b and c.

Example 1:

Input: s = "abcabc"

Output: 10

Explanation: The substrings containing at least one occurrence of the characters a, b and c are "abc", "abca", "abcab", "abcabc", "bca", "bcab", "bcabc", "cab", "cabc" and "abc" (**again**).

Example 2:

Input: s = "aaacb"

Output: 3

Explanation: The substrings containing at least one occurrence of the characters a, b and c are "aaacb", "aacb" and "acb".

Example 3:

Input: s = "abc"

Output: 1

Constraints:

- $3 \leq \text{s.length} \leq 5 \times 10^4$
- s only consists of a, b or c characters.

✓ This problem strengthens sliding window and two-pointer techniques for substring analysis. It teaches how to track character frequencies dynamically within a moving window. It builds problem-solving efficiency for real-time string parsing and window-based constraints.

8 GRAPHS

Leetcode: [#399. Evaluate Division](#)

You are given an array of variable pairs equations and an array of real numbers values. For each pair of variables, the first value is the value of the first variable and the second value is the value of the second variable. You are also given an array of real numbers values. For each pair of variables, the first value is the value of the first variable and the second value is the value of the second variable. You are also given an array of real numbers values. For each pair of variables, the first value is the value of the first variable and the second value is the value of the second variable.

B.Tech.ComputerScienceandEngineering(AIandML) 171

numbers values, where $\text{equations}[i] = [A_i, B_i]$ and $\text{values}[i]$ represent the equation $A_i / B_i = \text{values}[i]$. Each A_i or B_i is a string that represents a single variable.

You are also given some queries, where $\text{queries}[j] = [C_j, D_j]$ represents the j^{th} query where you must find the answer for $C_j / D_j = ?$.

Return *the answers to all queries*. If a single answer cannot be determined, return -1.0.

Note: The input is always valid. You may assume that evaluating the queries will not result in division by zero and that there is no contradiction.

Note: The variables that do not occur in the list of equations are undefined, so the answer cannot be determined for them.

Example 1:

Input: $\text{equations} = [["a","b"],["b","c"]]$, $\text{values} = [2.0,3.0]$, $\text{queries} = [["a","c"],["b","a"],["a","e"],["a","a"],["x","x"]]$

Output: $[6.00000,0.50000,-1.00000,1.00000,-1.00000]$

Explanation:

Given: $a / b = 2.0$, $b / c = 3.0$

queries are: $a / c = ?$, $b / a = ?$, $a / e = ?$, $a / a = ?$, $x / x = ?$

return: $[6.0, 0.5, -1.0, 1.0, -1.0]$

note: x is undefined $\Rightarrow -1.0$

Example 2:

Input: $\text{equations} = [["a","b"],["b","c"],["bc","cd"]]$, $\text{values} = [1.5,2.5,5.0]$, $\text{queries} = [["a","c"],["c","b"],["bc","cd"],["cd","bc"]]$

Output: $[3.75000,0.40000,5.00000,0.20000]$

Example 3:

Input: $\text{equations} = [["a","b"]]$, $\text{values} = [0.5]$, $\text{queries} = [["a","b"],["b","a"],["a","c"],["x","y"]]$

Output: $[0.50000,2.00000,-1.00000,-1.00000]$

Constraints:

- $1 \leq \text{equations.length} \leq 20$
- $\text{equations}[i].\text{length} == 2$
- $1 \leq A_i.\text{length}, B_i.\text{length} \leq 5$
- $\text{values.length} == \text{equations.length}$
- $0.0 < \text{values}[i] \leq 20.0$
- $1 \leq \text{queries.length} \leq 20$
- $\text{queries}[i].\text{length} == 2$
- $1 \leq C_j.\text{length}, D_j.\text{length} \leq 5$
- A_i, B_i, C_j, D_j consist of lower case English letters and digits.

✓ This problem introduces graph-based modeling of real-world relationships using variables and ratios. It strengthens understanding of DFS/BFS traversal in weighted graphs to compute indirect relationships. It builds foundational skills for solving problems involving equation systems, unit conversions, and dependency resolution.

9 GRAPHS

Leetcode: [#207. Course Schedule](#)

There are a total of numCourses courses you have to take, labeled from 0 to $\text{numCourses} - 1$. You are given an array prerequisites where $\text{prerequisites}[i] = [a_i, b_i]$ indicates that you **must** take course b_i first if you want to take course a_i .

- For example, the pair $[0, 1]$, indicates that to take course 0 you have to first take course 1.

Return true if you can finish all courses. Otherwise, return false.

Example 1:

Input: $\text{numCourses} = 2$, $\text{prerequisites} = [[1,0]]$

Output: true

Explanation: There are a total of 2 courses to take.

To take course 1 you should have finished course 0. So it is possible.

Example 2:

Input: numCourses = 2, prerequisites = [[1,0],[0,1]]

Output: false

Explanation: There are a total of 2 courses to take.

To take course 1 you should have finished course 0, and to take course 0 you should also have finished course 1. So it is impossible.

Constraints:

- $1 \leq \text{numCourses} \leq 2000$
- $0 \leq \text{prerequisites.length} \leq 5000$
- $\text{prerequisites}[i].\text{length} == 2$
- $0 \leq a_i, b_i < \text{numCourses}$
- All the pairs $\text{prerequisites}[i]$ are **unique**.

✓ This problem helps students understand cycle detection in directed graphs using topological sorting. It introduces real-world applications of dependency resolution, scheduling, and prerequisite management.

22CS102035	COMPETITIVE PROGRAMMING	3	-	2	-	4
Pre-Requisite	-					
Anti-Requisite	Design and Analysis of Algorithms					
Co-Requisite	-					

COURSE DESCRIPTION: This course covers algorithm design and analysis, including complexity, mathematical, string, greedy, dynamic programming, recursion, and backtracking techniques. It also explores graph algorithms, branch and bound, and NP-hard/NP-complete problem concepts.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Demonstrate understanding of time and space complexity concepts, and apply mathematical and string algorithms for efficient problem solving.
- CO2.** Apply divide and conquer and greedy strategies to design and analyze efficient algorithms for sorting, searching, and optimization problems.
- CO3.** Develop dynamic programming and bitwise algorithm solutions for complex computational problems involving overlapping subproblems and bit manipulation.
- CO4.** Utilize recursion and backtracking techniques to explore solution spaces and solve constraint satisfaction problems effectively.
- CO5.** Analyze graph algorithms including shortest path, cycle detection, and connectivity, and apply advanced concepts such as branch and bound and NP-completeness theory.
- CO6.** Work independently to solve problems with effective communication.

COURSE CONTENT

Module 1: TIME AND SPACE COMPLEXITY, MATHEMATICAL AND STRING ALGORITHMS (9 Periods)

Time and space complexity: Big-O, Big-Ω, Big-Θ notations, best, average, worst-case analysis, Asymptotic analysis, growth functions, complexity classes, time estimation, **Mathematical algorithms:** GCD, LCM, modular arithmetic, prime checks, Sieve of Eratosthenes, binary exponentiation, modular power, modular inverse, base conversion, digit operations.

String algorithms: naive pattern matching, KMP, Rabin-Karp, Z-algorithm, longest palindromic substring, Introduction of Debugging tools such as GDB and online IDEs and

code visualizer

Module 2: DIVIDE AND CONQUER, GREEDY ALGORITHMS (9 Periods)

Divide and conquer strategy, recurrence relations, Master Theorem, Algorithms: merge sort, quick sort, binary search, closest pair of points, matrix multiplication; Greedy strategy, activity selection, fractional knapsack, Huffman coding, MST (Prim's, Kruskal's), job sequencing, greedy-choice property, comparison with dynamic programming.

Module 3: DYNAMIC PROGRAMMING AND BITWISE ALGORITHMS (8 Periods)

Dynamic programming concepts, overlapping subproblems, memoization, principle of optimality, Classical problems: 0/1 knapsack, LCS, matrix chain multiplication, coin change, LIS, Tabulation vs memoization, bit manipulation: AND, OR, XOR, set/clear/check bits, power of two, bitwise problems like unique elements, subset generation, intro to bitmask DP.

Module 4: RECURSION AND BACKTRACKING (8 Periods)

Recursion basics, recursive tree, tail recursion, factorial, Fibonacci, Towers of Hanoi, Backtracking concepts, solution space exploration, pruning techniques, Backtracking problems: N-Queens, Sudoku solver, Rat in a Maze, subset sum, word search, comparison with pure recursion.

Module 5: GRAPH ALGORITHMS BRANCH AND BOUND, NP-HARD AND NP-COMPLETE (11 Periods)

Shortest path algorithms: introduction to Dijkstra's, Bellman-Ford (conceptual only); Cycle detection methods, checking connectivity in graphs, Topological sorting, Advanced concepts: Trie (intro), suffix arrays (conceptual).

Branch and Bound: Bounding functions, solving TSP, 0/1 knapsack; NP-Hard and NP-Complete problems: SAT, Clique, subset sum, reductions, P vs NP.

Total Periods: 45

EXPERIENTIAL LEARNING

LIST OF EXERCISES:

(All source code should be maintained and version-controlled on GitHub)

1) TIME AND SPACE COMPLEXITY, MATHEMATICAL AND STRING ALGORITHMS

Leetcode: [#1250. Check If It Is a Good Array](#)

Given an array `nums` of positive integers. Your task is to select some subset of `nums`, multiply each element by an integer and add all these numbers. The array is said to be **good** if you can obtain a sum of 1 from the array by any possible subset and multiplicand.

Return True if the array is **good** otherwise return False.

Example 1:

Input: `nums = [12,5,7,23]`

Output: true

Explanation: Pick numbers 5 and 7.

$$5*3 + 7*(-2) = 1$$

Example 2:

Input: `nums = [29,6,10]`

Output: true

Explanation: Pick numbers 29, 6 and 10.

$$29*1 + 6*(-3) + 10*(-1) = 1$$

Example 3:

Input: `nums = [3,6]`

Output: false

Constraints:

- $1 \leq \text{nums.length} \leq 10^5$
- $1 \leq \text{nums}[i] \leq 10^9$

✓ This problem reinforces the concept of Linear Diophantine Equations and their

connection with the Greatest Common Divisor (GCD). It highlights that an array is good if the GCD of all elements is 1, making it a valuable lesson in number theory.

2. TIME AND SPACE COMPLEXITY, MATHEMATICAL AND STRING ALGORITHMS

LeetCode: [#2344. Minimum Deletions to Make Array Divisible](#)

You are given two positive integer arrays `nums` and `numsDivide`. You can delete any number of elements from `nums`.

Return the **minimum** number of deletions such that the **smallest** element in `nums` **divides** all the elements of `numsDivide`. If this is not possible, return -1.

Note that an integer `x` divides `y` if `y % x == 0`.

Example 1:

Input: `nums = [2,3,2,4,3]`, `numsDivide = [9,6,9,3,15]`

Output: 2

Explanation:

The smallest element in `[2,3,2,4,3]` is 2, which does not divide all the elements of `numsDivide`.

We use 2 deletions to delete the elements in `nums` that are equal to 2 which makes `nums = [3,4,3]`.

The smallest element in `[3,4,3]` is 3, which divides all the elements of `numsDivide`. It can be shown that 2 is the minimum number of deletions needed.

Example 2:

Input: `nums = [4,3,6]`, `numsDivide = [8,2,6,10]`

Output: -1

Explanation:

We want the smallest element in `nums` to divide all the elements of `numsDivide`.

There is no way to delete elements from `nums` to allow this.

Constraints:

- $1 \leq \text{nums.length}, \text{numsDivide.length} \leq 10^5$
- $1 \leq \text{nums}[i], \text{numsDivide}[i] \leq 10^9$

✓ This problem enhances understanding of stack-based validation and greedy algorithms for maintaining syntactic correctness. It helps learners manage open-close matching logic and handle unbalanced expressions efficiently.

3. DIVIDE AND CONQUER, GREEDY ALGORITHMS

Leetcode: [#543. Diameter of Binary Tree](#)

Given the root of a binary tree, return the length of the **diameter** of the tree.

The **diameter** of a binary tree is the **length** of the longest path between any two nodes in a tree. This path may or may not pass through the root.

The **length** of a path between two nodes is represented by the number of edges between them.

Example 1:

Input: root = [1,2,3,4,5]

Output: 3

Explanation: 3 is the length of the path [4,2,1,3] or [5,2,1,3].

Example 2:

Input: root = [1,2]

Output: 1

Constraints:

- The number of nodes in the tree is in the range [1, 10⁴].
- -100 ≤ Node.val ≤ 100

✓ This problem helps learners understand tree traversal, particularly depth-first search (DFS). It develops logic to compute height of subtrees and track maximum path length between any two nodes. Ideal for mastering recursive strategies and handling tree-based interview problems.

4. **DIVIDE AND CONQUER, GREEDY ALGORITHMS**

Leetcode: [#235. Lowest Common Ancestor of a Binary Search Tree](#)

Given a binary search tree (BST), find the lowest common ancestor (LCA) node of two given nodes in the BST.

According to the [definition of LCA on Wikipedia](#): "The lowest common ancestor is defined between two nodes p and q as the lowest node in T that has both p and q as descendants (where we allow **a node to be a descendant of itself**)."

Example 1:

Input: root = [6,2,8,0,4,7,9,null,null,3,5], p = 2, q = 8

Output: 6

Explanation: The LCA of nodes 2 and 8 is 6.

Example 2:

Input: root = [6,2,8,0,4,7,9,null,null,3,5], p = 2, q = 4

Output: 2

Explanation: The LCA of nodes 2 and 4 is 2, since a node can be a descendant of itself according to the LCA definition.

Example 3:

Input: root = [2,1], p = 2, q = 1

Output: 2

Constraints:

- The number of nodes in the tree is in the range $[2, 10^5]$.
- $-10^9 \leq \text{Node.val} \leq 10^9$
- All Node.val are **unique**.
- $p \neq q$
- p and q will exist in the BST.

✓ This problem reinforces BST traversal techniques and deepens understanding of tree properties. It helps learners identify how value-based decisions can guide efficient traversal paths. Useful for building foundational logic for divide-and-conquer problems in trees and graphs.

5. DYNAMIC PROGRAMMING AND BITWISE ALGORITHMS

LeetCode: [#210. Course Schedule II](#)

There are a total of numCourses courses you have to take, labeled from 0 to numCourses - 1. You are given an array prerequisites where prerequisites[i] = [a_i, b_i] indicates that you **must** take course b_i first if you want to take course a_i.

- For example, the pair [0, 1], indicates that to take course 0 you have to first take course 1.

Return *the ordering of courses you should take to finish all courses*. If there are many valid answers, return **any** of them. If it is impossible to finish all courses, return **an empty array**.

Example 1:

Input: numCourses = 2, prerequisites = [[1,0]]

Output: [0,1]

Explanation: There are a total of 2 courses to take. To take course 1 you should have finished course 0. So the correct course order is [0,1].

Example 2:

Input: numCourses = 4, prerequisites = [[1,0],[2,0],[3,1],[3,2]]

Output: [0,2,1,3]

Explanation: There are a total of 4 courses to take. To take course 3 you should have finished both courses 1 and 2. Both courses 1 and 2 should be taken after you finished course 0.

So one correct course order is [0,1,2,3]. Another correct ordering is [0,2,1,3].

Example 3:

Input: numCourses = 1, prerequisites = []

Output: [0]

Constraints:

- $1 \leq \text{numCourses} \leq 2000$
- $0 \leq \text{prerequisites.length} \leq \text{numCourses} * (\text{numCourses} - 1)$

- prerequisites[i].length == 2
- 0 ≤ a_i, b_i < numCourses
- a_i ≠ b_i
- All the pairs [a_i, b_i] are **distinct**.

✓ This problem strengthens your understanding of topological sorting, especially using BFS (Kahn's algorithm) or DFS. It helps learners grasp cycle detection in directed graphs, critical for scheduling and dependency resolution problems.

6. DYNAMIC PROGRAMMING AND BITWISE ALGORITHMS

Leetcode: [#200. Number of Islands](#)

Given an m x n 2D binary grid grid which represents a map of '1's (land) and '0's (water), return *the number of islands*.

An **island** is surrounded by water and is formed by connecting adjacent lands horizontally or vertically. You may assume all four edges of the grid are all surrounded by water.

Example 1:

Input: grid =
 [
 ["1","1","1","1","0"],
 ["1","1","0","1","0"],
 ["1","1","0","0","0"],
 ["0","0","0","0","0"]
]

Output: 1

Example 2:

Input: grid =
 [
 ["1","1","0","0","0"],
 ["1","1","0","0","0"],
 ["0","0","1","0","0"],
 ["0","0","0","1","1"]
]

Output: 3

Constraints:

- m == grid.length
- n == grid[i].length
- 1 ≤ m, n ≤ 300
- grid[i][j] is '0' or '1'.

✓ This problem enhances understanding of graph traversal techniques like DFS or BFS in 2D matrices. It builds foundational skills for flood fill algorithms, useful in image processing and geographic data analysis.

7. RECURSION AND BACKTRACKING

Leetcode: [#35. Search Insert Position](#)

Given a sorted array of distinct integers and a target value, return the index if the target is found. If not, return the index where it would be if it were inserted in order. You must write an algorithm with O(log n) runtime complexity.

Example 1:

Input: nums = [1,3,5,6], target = 5

Output: 2

Example 2:

Input: nums = [1,3,5,6], target = 2

Output: 1

Example 3:

Input: nums = [1,3,5,6], target = 7

Output: 4

Constraints:

- $1 \leq \text{nums.length} \leq 10^4$
- $-10^4 \leq \text{nums}[i] \leq 10^4$
- nums contains **distinct** values sorted in **ascending** order.
- $-10^4 \leq \text{target} \leq 10^4$

✓ This problem strengthens understanding of binary search, a fundamental divide-and-conquer technique. It trains learners to efficiently handle insert position logic within sorted data structures. The concept is widely applicable in search engines, database indexing, and algorithm optimization tasks.

8. RECURSION AND BACKTRACKING

Leetcode: [#324. Wiggle Sort II](#)

Given an integer array nums, reorder it such that $\text{nums}[0] < \text{nums}[1] > \text{nums}[2] < \text{nums}[3] \dots$

You may assume the input array always has a valid answer.

Example 1:

Input: nums = [1,5,1,1,6,4]

Output: [1,6,1,5,1,4]

Explanation: [1,4,1,5,1,6] is also accepted.

Example 2:

Input: nums = [1,3,2,2,3,1]

Output: [2,3,1,3,1,2]

Constraints:

- $1 \leq \text{nums.length} \leq 5 * 10^4$
- $0 \leq \text{nums}[i] \leq 5000$
- It is guaranteed that there will be an answer for the given input nums.

✓ This problem develops an understanding of array rearrangement patterns, particularly wiggle sort. It enhances knowledge of median finding, index mapping, and three-way partitioning techniques. Useful in scenarios where alternating highs and lows are required, such as stock price modeling or load balancing.

9. GRAPH ALGORITHMS BRANCH AND BOUND, NP-HARD AND NP-COMPLETE

LeetCode: [#210. Course Schedule II](#)

There are a total of numCourses courses you have to take, labeled from 0 to numCourses - 1. You are given an array prerequisites where $\text{prerequisites}[i] = [a_i, b_i]$ indicates that you **must** take course b_i first if you want to take course a_i .

- For example, the pair [0, 1], indicates that to take course 0 you have to first take course 1.

Return *the ordering of courses you should take to finish all courses*. If there are many valid answers, return **any** of them. If it is impossible to finish all courses, return **an empty array**.

Example 1:

Input: numCourses = 2, prerequisites = [[1,0]]

Output: [0,1]

Explanation: There are a total of 2 courses to take. To take course 1 you should have finished course 0. So the correct course order is [0,1].

Example 2:

Input: numCourses = 4, prerequisites = [[1,0],[2,0],[3,1],[3,2]]

Output: [0,2,1,3]

Explanation: There are a total of 4 courses to take. To take course 3 you should have finished both courses 1 and 2. Both courses 1 and 2 should be taken after you finished

course 0.

So one correct course order is [0,1,2,3]. Another correct ordering is [0,2,1,3].

Example 3:

Input: numCourses = 1, prerequisites = []

Output: [0]

Constraints:

- $1 \leq \text{numCourses} \leq 2000$
- $0 \leq \text{prerequisites.length} \leq \text{numCourses} * (\text{numCourses} - 1)$
- $\text{prerequisites}[i].\text{length} == 2$
- $0 \leq a_i, b_i < \text{numCourses}$
- $a_i \neq b_i$
- All the pairs $[a_i, b_i]$ are **distinct**.

✓ This problem strengthens your understanding of topological sorting, especially using BFS (Kahn's algorithm) or DFS. It helps learners grasp cycle detection in directed graphs, critical for scheduling and dependency resolution problems.

11 GRAPH ALGORITHMS BRANCH AND BOUND, NP-HARD AND NP-COMPLETE

Leetcode: [#200. Number of Islands](#)

Given an $m \times n$ 2D binary grid `grid` which represents a map of '1's (land) and '0's (water), return the *number of islands*.

An **island** is surrounded by water and is formed by connecting adjacent lands horizontally or vertically. You may assume all four edges of the grid are all surrounded by water.

Example 1:

Input: `grid = [`

```
["1","1","1","1","0"],
["1","1","0","1","0"],
["1","1","0","0","0"],
["0","0","0","0","0"]
]
```

Output: 1

Example 2:

Input: `grid = [`

```
["1","1","0","0","0"],
["1","1","0","0","0"],
["0","0","1","0","0"],
["0","0","0","1","1"]
]
```

Output: 3

Constraints:

- $m == \text{grid.length}$
- $n == \text{grid}[i].\text{length}$
- $1 \leq m, n \leq 300$
- $\text{grid}[i][j]$ is '0' or '1'.

✓ This problem enhances understanding of graph traversal techniques like DFS or BFS in 2D matrices. It builds foundational skills for flood fill algorithms, useful in image processing and geographic data analysis.

22CS101002	COMPUTER ORGANIZATION AND ARCHITECTURE	3	-	-	-	3

Pre-Requisite Digital Logic Design

Anti-Requisite -

Co-Requisite -

COURSE DESCRIPTION: This course deals with basic function, structure and components of computer system, Central Processing Unit, Control Unit and I/O Unit. This course also imparts knowledge on different types of Memory Systems, Parallel Processing techniques and Multicore architectures with its issues.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1** Demonstrate knowledge on computer organization architecture and interconnection structures of a digital computer.
- CO2** Analyze Arithmetic Operations, Addressing Modes, Instruction Formats, Processor and Register organization.
- CO3** Design digital circuits for the given functional description of micro operations and memory elements
- CO4** Investigate the performance of Input/Output Systems, Memory systems, parallel processors, Multi core architectures to evaluate the cost-performance trade-offs.

Correlation Levels: 1: Low 2: Medium: 3: High

COURSE CONTENT

Module 1: INTRODUCTION TO COMPUTER SYSTEM (08 Periods)

Organization and architecture, Structure and function, IAS computer structure, Computer function, Interconnection structures, Bus interconnection.

Module 2: CENTRAL PROCESSING UNIT (09 Periods)

Arithmetic logic unit, Integer multiplication- Booth's algorithm; Floating point representation principles, Machine instruction characteristics, Addressing modes, Instruction formats – Instruction length, Allocation of bits; Processor organization, Register organization – User visible registers, Control and status registers; Instruction cycle.

Module 3: CONTROL UNIT AND INPUT/OUTPUT (10 Periods)

Control Unit: Micro operations, Control of the processor – Functional requirements, Control signals, Internal processor organization; Hardwired implementation, Microinstructions, Micro programmed control unit, Micro instruction sequencing – Design considerations, sequencing techniques, Address generation; Micro instruction execution- A taxonomy of microinstructions, Microinstruction encoding.

Input/Output: External devices, I/O modules, Direct memory access function, I/O Channels and Processors, PCI Physical and Logical Architecture.

Module 4: MEMORY SYSTEMS (09 Periods)

Semiconductor Memories: Computer Memory System overview, Semiconductor Main Memory- Organization, DRAM and SRAM, Types of ROM, Chip logic, Chip packaging, Module organization, Interleaved memory; DDR DRAM, Flash Memory, Newer Nonvolatile Solid-State Memory Technologies.

Cache Memory: Cache Memory Principles, Elements of Cache Design-Cache Addresses, Mapping Functions.

External Memory: Solid State Drives.

Module 5: PARALLEL ORGANIZATION (09 Periods)

Parallel Processing: Multiple Processor Organizations, Instruction Pipelining, Symmetric Multiprocessors, Non uniform Memory Access, Multicore Organization.

Multicore Computers: Hardware performance issues, Software performance issues, Multicore organization, Intel Core i7-990X.

Total Periods: 45

EXPERIENTIAL LEARNING

1. Write a report on Product Specifications such as CPU, Memory, Processor Graphics and advanced technologies of Intel Core i9-12900K -New performance hybrid architecture. The World's Best Gaming Processor: Available with up to 16 cores and 24 threads, the new 12th Gen Intel Core processor family includes the world's best gaming processor, the Core i9-12900K, unleashing gaming experiences across top titles.

(<https://ark.intel.com/content/www/us/en/ark/products/134599/intel-core-i912900k-processor-30m-cache-up-to-5-20-ghz.html>)

2. Write a report on OpenCL(Open Computing Language) framework used for writing programs that execute across heterogeneous platforms consisting of central processing units, graphics processing units, digital signal processors, field-programmable gate arrays and other processors or hardware accelerators.(<https://www.khronos.org/api/opencl>)

COURSE DESCRIPTION: Concepts of Software Engineering; Software Process Models; Conventional and Agile Process Models; Software Requirements Engineering Process; System Analysis; Architectural Design; User Interface Design and Re-engineering; Software Testing; Risk and Quality Management.

COURSE OUTCOMES: After successful completion of this course, the students will be able to:

- CO1.** Demonstrate knowledge on Fundamental concepts of software engineering and analyze process models required to develop a software system.
- CO2.** Analyze software requirements and model requirements for the given scenario.
- CO3.** Apply design concepts and metrics for software development.
- CO4.** Apply testing strategies and techniques for quality software.
- CO5.** Analyze risks in software development life cycle and apply risk strategies to mitigate risks.

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT:

MODULE 1: SOFTWARE ENGINEERING AND SOFTWARE PROCESS (09 Periods)

Engineering Layers; The Software Process, Software Engineering Practice, Software myths.

Process models: A Generic Process Model, Prescriptive Process Models-The Waterfall Model, Incremental Process Models, Specialized Process Models; The Unified Process, Agile Development-Agility, Agile Process, Extreme Programming (XP), Scrum, Lean Software Development (LSD), Dynamic System Development Method, Agile Modeling (AM), Agile Unified Process (AUP), The Cleanroom strategy.

MODULE 2: REQUIREMENTS ENGINEERING AND MODELING (09 Periods)

Requirements Engineering: Functional and non-functional requirements, The software requirements document, Requirements specifications, Requirements engineering processes, Requirements elicitation and analysis, Requirements validation, Requirements management.

Requirements Modeling: Requirements Analysis, Data Modeling Concepts, Flow-Oriented Modeling, Scenario based Modeling, UML Models that supplement the Use Case Case study on Requirements modeling for Web and Mobile Apps.

MODULE 3: DESIGN ENGINEERING AND METRICS (09 Periods)

Design Engineering: Design within the context of Software Engineering, The Design process, Design concepts, Software Architecture, Architectural Styles, Architectural design, Pattern based Design-Design Patterns, Pattern based software design.

Process and Project Metrics: Metrics in the process and project domains, Software Measurement, Metrics for software quality.

MODULE 4: SOFTWARE TESTING STRATEGIES AND APPLICATIONS (09 Periods)

Testing strategies: A strategic approach to software testing, Strategic issues, Test strategies for conventional software, Test strategies for object oriented software, Validation testing, System testing, The art of debugging.

Testing Conventional Applications: Software testing fundamentals, White box testing- Basis path testing, Control structure testing; Black box testing, Object oriented testing methods.

MODULE 5: RISK, QUALITY MANAGEMENT AND REENGINEERING (09 Periods)

Risk and Quality Management: Reactive and Proactive risk strategies, Software risks, Risk Mitigation Monitoring and Management (RMMM), RMMM plan, Software quality factors, Defect Amplification Model, Formal Technical Reviews (FTR), Software Quality Assurance (SQA)- Tasks, Goals and Metrics; Software reliability.

Reengineering: Introduction, Business Process Reengineering (BPR), Software Reengineering, Restructuring, Reverse engineering, Forward engineering.

Total Periods: 45

EXPERIENTIAL LEARNING:

CASE STUDY 1: RECRUITMENT PROCEDURE FOR SOFTWARE INDUSTRY

Problem Statement: In the software industry the recruitment procedure is the basic thing that goes in the hand with the requirement as specified by the technical management team. HR first gives an advertisement in leading Newspapers, Journals, Weeklies and Websites. The job seekers can apply for it through by Post or by e-mail to the company. The technical skill and the experience of the candidates are reviewed and the short listed candidates are called for the interview. There may be different rounds for interview like the written test, technical interview, and HR interview. After the successful completion of all rounds of interview, the selected candidates' names are displayed. Meanwhile HR gives all the details about the salary, working hours, terms and conditions and the retirement benefit to the candidate.

CASE STUDY 2: ONLINE AUCTION SALES

Problem Statement: The online auction system is a design about a website where sellers collect and prepare a list of items they want to sell and place it on the website for visualizing. To accomplish this purpose the user has to access the site. In case it's a new user he has to register. Purchaser's login and select items they want to buy and keep bidding for it. Interacting with the purchasers and sellers through messages does this. There is no need for customer to interact with the sellers because every time the purchasers bid, the details will be updated in the database. The purchaser making the highest bid for an item before the close of the auction is declared as the owner of the item. If the auctioneer or the purchaser doesn't want to bid for the

product then there is fixed cutoff price mentioned for every product. He can pay that amount directly and own the product. The purchaser gets a confirmation of his purchase as an acknowledgement from the website. After the transition by going back to the main menu where he can view other items.

COURSE CONTENT

Module 1: INTRODUCTION TO ALGORITHMS

(10 Periods)

Algorithm, Algorithm pseudocode conventions, Performance analysis - Space complexity, Time complexity, Asymptotic notations; Amortized analysis – Aggregate analysis, Accounting method, Potential method; Recurrences - Substitution method, Recursion-tree method, Master method.

Module 2: DISJOINT SETS, DIVIDE AND CONQUER

(08 Periods)

Disjoint Sets: Operations, Union and Find algorithms.

Divide and Conquer: General method, Defective chess board, Binary search, Finding maximum and minimum, Merge sort, Strassen's matrix multiplication.

Module 3 DYNAMIC PROGRAMMING

(09 Periods)

General method, Matrix-chain multiplication, All pairs shortest path, Optimal binary search trees, 0/1 Knapsack problem, Traveling salesperson problem, Flow shop scheduling.

Module 4 GREEDY METHOD, BACKTRACKING

(10 Periods)

Greedy Method: General method, Knapsack problem, Job sequencing with deadlines, Huffman codes, Single source shortest paths, Optimal merge patterns.

Backtracking: General method, 8-Queens problem, Sum of subsets, Graph coloring, Hamiltonian cycles.

Module 5 BRANCH AND BOUND, NP-HARD AND NP-COMPLETE PROBLEMS

(08 Periods)

Branch and Bound: LC search, LC branch and bound, FIFO branch and bound, 0/1 knapsack problem, Traveling salesperson problem.

NP Hard and NP-Complete Problems: Nondeterministic algorithms, NP-hard and NP-complete classes, Cook's theorem, NP-hard scheduling problems – Scheduling identical processors.

Total Periods: 45

EXPERIENTIAL LEARNING

LIST OF EXERCISES:

1. Sort a given set of n integer elements using Quick Sort and merge sort methods and compute its time complexities. Run the programs for varied values of $n > 1000$ and record the time taken to sort. Plot a graph of the time taken versus n for both algorithms. The elements can be read from a file or can be generated using the random number generator. Demonstrate how the divide and conquer method works along with its time complexity analysis: worst case, average case and best case.
2. Write a program to implement knapsack problem using greedy method.
3.
 - a) Write a program to find minimum cost spanning tree using Kruskal's Algorithm.
 - b) Write a program to find minimum cost spanning tree using Prim's Algorithm.
4. Write a program to implement 0/1 Knapsack problem using Dynamic Programming method.
5. Write a program to implement All-Pairs Shortest Paths problem using Floyd's algorithm.
6. Write a program to implement Travelling Sales Person problem using Dynamic programming method.

7. Write a program to implement backtracking algorithm for the N-queens problem.
Write a program to find a subset of a given set $S = \{S_1, S_2, \dots, S_n\}$ of n positive integers whose SUM is equal to a given positive integer d . For
8. example, if $S = \{1, 2, 5, 6, 8\}$ and $d = 9$, there are two solutions $\{1, 2, 6\}$ and $\{1, 8\}$. Display a suitable message, if the given problem instance doesn't have a solution.
9. Write a program to find all Hamiltonian Cycles in a connected undirected Graph G of n vertices using backtracking principle.

Course Code	Course Title	L	T	P	S	C
22AI102001	OPERATING SYSTEMS	3	-	2	-	4
Pre-Requisite	-					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION: Operating Systems Operations; Process Scheduling; Process Synchronization, Deadlocks; Paging and Segmentation, Disk Scheduling; File Concepts, I/O Interface; Concepts of Protection and Security.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1** Analyze performance of CPU scheduling algorithms
- CO2** Design solutions for process synchronization problems by using semaphores and monitors
- CO3** Devise solutions for deadlocks using deadlock handling mechanisms
- CO4** Solve memory management problems using page replacement and disk scheduling algorithms
- CO5** Identify efficient file allocation methods for optimal disk utilization & analyse services of I/O subsystems and mechanisms of security & protection
- CO6** Work independently to solve problems with effective communication

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1 INTRODUCTION TO OPERATING SYSTEM AND PROCESS MANAGEMENT (08 Periods)

Introduction: Definition, Operating System Structure and Services, System Calls.

Process Management: Process Scheduling, Process Control Block, Inter Process Communication, Threads, Multithreading Models, CPU Scheduling Criteria, Scheduling Algorithms, Multiprocessor Scheduling.

Module 2 PROCESS SYNCHRONIZATION AND DEADLOCKS (10 Periods)

Process Synchronization: Critical Section Problem, Peterson's Solution, Synchronization Hardware, Semaphores, Synchronization Problems, Monitors.

Deadlocks: System Model, Deadlock characterization, Methods for handling deadlocks, Prevention, Detection, Avoidance, Recovery from deadlock.

Module 3 MEMORY MANAGEMENT AND SECONDARY STORAGE (10 Periods)

Memory Management: Swapping, Contiguous Allocation, Paging, Segmentation, Segmentation with Paging.

Virtual Memory: Demand Paging, Page Replacement Algorithms, Copy-on-Write, Thrashing.

Secondary Storage Structure: Overview of Mass Storage Structure, Disk Structure, Disk Scheduling, Disk Management.

Module 4 FILE AND I/O SYSTEMS (08 Periods)

File System: File concept, Access Methods, Directory Structure, File System Structure, i-node, File System Implementation, Directory Implementation, Allocation Methods.

I/O System: I/O Hardware, Application I/O Interface, Kernel I/O subsystem.

Module 5 PROTECTION AND SECURITY (09 Periods)

Protection: Goals, Principles, Domain of Protection, Access Matrix, Implementation of Access Matrix, Access Control, Revocation of Access Rights.

Security: Security Problem, Program Threats, System and Network Threats, User Authentication, Implementing Security Defenses, Firewalling to Protect Systems and Networks, Computer-Security Classifications.

Total Periods: 45

EXPERIENTIAL LEARNING

1. a) Write a program to implement Process System Calls.
b) Write a program to implement I/O System Calls.
2. Write a program to implement named and unnamed pipes.
3. Demonstrate File Permissions.
4. Analyze the following CPU Scheduling Algorithms:
a) FCFS b) SJF (Preemptive) c) Priority d) Round Robin
5. Design solutions for the following synchronization problems:
a) Producer Consumer Problem b) Dining Philosophers Problem.
6. Design Banker's Algorithm for Deadlock Avoidance. Find the safe sequence. If Maximum request of any one process is changed, detect whether a deadlock has occurred or not. Consider the number of resources are three and Jobs are five.
7. Implement the following Algorithms:

- a) First Fit b) Best Fit c) Worst Fit
- 8. Implement the following Page Replacement Algorithms
 - a) FIFO b) LFU c) LRU d) Optimal
- 9. Implement the following Disk Scheduling Algorithms
 - a) FCFS b) SSTF c) SCAN d) CSCAN
- 10. Implement the following file allocation strategies:
 - a) Contiguous Allocation b) Linked Allocation

Course Code	Course Title	L	T	P	S	C
22CS102005	DATABASE MANAGEMENT SYSTEMS	3	-	2	-	4

Pre-Requisite -

Anti-Requisite -

Co-Requisite -

COURSE DESCRIPTION: Introduction to database systems; Database design; Relational model; Relational algebra; SQL queries; Constraints and triggers; PL/SQL; Schema refinement and normal forms; Transaction management; Concurrency control; Overview of storage and indexing.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Apply the concepts of ER-modelling and normalization to design viable data models for a given problem.
- CO2.** Formulate relational database schemas, apply suitable integrity constraints, for querying databases.
- CO3.** Use SQL to store, query, and manipulate data in relational databases.
- CO4.** Develop PL/SQL blocks to centralize database applications for maintainability and reusability.
- CO5.** Analyze transaction processing, concurrency control and storage methods for database management.

CO-PO-PSO Mapping Table:

Course Outcomes	Program Outcomes												Program Specific Outcomes

Course Correlation Mapping	3	3	3	-	-	-	2	2	-	-	2	-	3	-	3	-

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1: INTRODUCTION TO DATABASE SYSTEMS AND DATABASE DESIGN (09 Periods)

Introduction to Database Systems: Database system applications, Purpose of database systems, View of data - Data abstraction, Instances and schemas, Data models; Database languages - Data Definition Language, Data Manipulation Language; Database architecture, Database users and administrators.

Introduction to Database design: Database design and ER diagrams, Entities, attributes and entity sets, Relationships and relationship sets, Additional features of ER model, Conceptual Design with ER model.

Module 2: RELATIONAL MODEL, RELATIONAL ALGEBRA AND TUPLE CALCULUS (08 Periods)

Relational Model: Creating and modifying relations, Integrity constraints over relations, Enforcing integrity constraints, Querying relational data, Logical database design, Introduction to views, Destroying/altering tables and views.

Relational Algebra and Tuple calculus: Preliminaries, Relational Algebra operators and tuple calculus.

Module 3 SQL AND PL/SQL (09 Periods)

SQL: Form of basic SQL query, Nested queries, Aggregate operators, Null values, Complex integrity constraints in SQL, Triggers and active databases.

PL/SQL: Generic PL/SQL block, PL/SQL data types, Control structure, Procedures and functions, Cursors, Database triggers.

Module 4 SCHEMAREFINEMENTANDTRANSACTIONS (10 Periods)

Schema Refinement: Problems caused by redundancy, Decompositions, Problems related to decomposition, Functional dependencies, Reasoning about FDs, First normal form, Second normal form, Third normal form, Boyce-Codd normal form, Multivalued dependencies, Fourth normal form, Join dependencies, Fifth normal form.

Transactions: Transaction concept, Transaction atomicity and durability, Concurrent Executions – Serializability, Recoverability, Implementation of isolation, Testing for serializability.

Module 5 CONCURRENCYCONTROL,STORAGEANDINDEXING (09 Periods)

Concurrency Control: Lock Based Protocols, Timestamp Based Protocols, Validation Based Protocols, Multiple Granularity, Deadlock Handling.

Storage and Indexing: Data on external storage, File organizations and indexing – Clustered indexes, Primary and secondary indexes; Index data structures – Hash based indexing, Tree based indexing; B and B+ Trees, Comparison of file organizations.

Total Periods: 45

EXPERIENTIAL LEARNING

LIST OF EXERCISES:

Week 1:

Design and analyze an ER Model for the following use case.

The Library Management System database keeps track of readers with the following considerations –

- The system keeps track of the staff with a single point authentication system comprising login Id and password.
- Staff maintains the book catalog with its ISBN, Book title, price(in INR), category(novel, general, story), edition, author Number and details.
- A publisher has publisher Id, Year when the book was published, and name of the book.
- Readers are registered with their user_id, email, name (first name, last name), Phone no (multiple entries allowed), communication address. The staff keeps track of readers.

Choose appropriate Entities and attributes and relationships and draw the complete ER diagram.

Week 2:

- a) Implement Data Definition Language commands -Create, Alter, Drop, Truncate, and Rename.
- b) Implement Data Manipulation Language commands - Insert, Select, Update, and Delete.
- c) Implement Single Row functions - Character, Numeric and Date functions.

Week 3:

Implement various types of integrity constraints - NOT NULL constraint, DEFAULT constraint, UNIQUE constraint, PRIMARY key, FOREIGN key, CHECK constraint.

Week 4:

- a) Implement group functions with different operators such as aggregate operators, group by, having and order by.
- b) Implement nested and correlated nested queries using set operators and set comparison operators.

Week 5:

- a) Creation of views, synonyms, sequence, indexes and save point.
- b) Implement various types of joins - outer join and inner join.

Basic PL/SQL:

Week 6:Construct PL/SQL block for the following.

- a) To determine whether a number is palindrome
- b) To determine whether a number is an Armstrong number
- c) To find greatest of three numbers
- d) To display Fibonacci series

Control Structures:

Week 7:

- a) Write a program in PL/SQL to update the salary of a specific employee by 20% if the salary less than 30000/- and 10% when the salary in between 30000/- and 60000/- and 5% when the salary is above 60000/- and display the salary with a suitable message.
- b) Write a PL/SQL program to display the description of the grade against a student's grade using CASE statement.

Exception Handling:

Week 8:

- a) Develop a PL/SQL program that displays the name and address of a student whose ID

is given. If there is no student with the given student ID in the database, the program should raise a run-time exception NO_DATA_FOUND, which should be captured in the EXCEPTION block.

- b) Construct the user-defined exceptions to get the salary of an employee and check it with the job's salary range. If the salary is below the range, raise an exception BELOW_SALARY_RANGE. If the salary is above the range, raise the exception ABOVE_SALARY_RANGE.

Functions:

Week 9:

- a) Write a function that accepts two numbers A and B and performs the following operations.
 - Addition
 - Subtraction
 - Multiplication
 - Division
- b) Write a PL/SQL block that reverses the given number.

Procedures:

Week 10:

- a) Write a procedure that accepts two numbers and displays their sum.
- b) Write procedures to demonstrate IN, IN OUT and OUT parameters.

Cursors:

Week 11:

- a) Write a block in PL/SQL to create a Cursor that displays the employee name and number of jobs he or she has done in the past.
- b) Write a program in PL/SQL to create a cursor to display the name and salary of each employee in the EMPLOYEES table whose salary is less than that specified by a passed-in parameter value.

Triggers:

Week 12:

Develop a suitable employee database application by considering appropriate attributes.

- a) Whenever the inserted or updated salary is more than 10 lacs per month a trigger should be fired.
- b) Whenever, the inserted or updated salary is less than 5000 per month a trigger should be activated.

COURSE DESCRIPTION: Finite automata; Nondeterministic Finite automata; Regular expressions; Applications of the pumping lemma; Context-Free Grammars; Normal forms for context-free grammars; pushdown automata; Chomsky hierarchy of languages; Turing machines.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Design finite state machines to recognize formal languages.
- CO2.** Analyze formal languages using automata.
- CO3.** Identify different types of grammars in formal languages.
- CO4.** Construct context free grammars for context free languages
- CO5.** Develop Turing machine for different computational problems.
- CO6.** Validate formal languages of automata by applying closure properties.

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1: FINITE AUTOMATA

(10 Periods)

Introduction to Finite automata, the central concepts of automata theory, Deterministic finite automata, Nondeterministic Finite automata, the equivalence of DFA and NDFA, Finite automata with epsilon-transitions, Conversion of epsilon-NFA to NFA and DFA, Mealy and Moore models.

Module 2: REGULAR EXPRESSIONS AND LANGUAGES (09 Periods)

Regular expressions, Identity rules, Finite automata and Regular expressions, Applications of regular expressions, Pumping lemma for regular languages, Applications of the pumping lemma, Closure properties of regular languages, Equivalence of two regular expressions, Equivalence of two finite automata and minimization of automata.

Module 3: CONTEXT-FREE GRAMMARS (09 Periods)

Context-Free Grammars, Parse trees, Applications of context free grammars, Ambiguity in grammars and languages, Normal forms for context-free grammars, the pumping lemma for context-free languages.

Module 4: PUSH DOWN AUTOMATA (08 Periods)

Definition of the pushdown automaton, the languages of a PDA, Equivalence of PDA's and CFG's, Deterministic pushdown automata, Chomsky hierarchy of languages, Undecidability.

Module 5: TURING MACHINE (09 Periods)

Turing machine model, Representation of Turing machine, Language acceptability by Turing machine, Design of Turing machine, Techniques for Turing machine construction, Variants of Turing machines, Universal Turing machine, Recursive and recursively enumerable languages (REL), properties of recursive and recursively enumerable languages, the model of linear bounded automaton.

Total Periods: 45

EXPERIENTIAL LEARNING

1. State and prove pumping lemma theorem for regular language. Prove that a $L = \{a^n b^n \text{ for } n = 0, 1, 2, \dots\}$ is not regular. b $L = \{a^{2^n} / n \geq 1\}$ is regular.
2. Draw DFA for all strings over $\{0, 1\}$ consisting of even number of 0's and 1's

(It's an indicative one. The Course Instructor may change the activities and the same shall be reflected in Course Handout)

COURSE DESCRIPTION: This course provides a detailed discussion on Introduction to computer networks; Protocols of physical layer, data link layer, medium access control sub layer, network layer, transport layer, application layer.

COURSE OUTCOMES: After successful completion of this course, the students will be able to:

- CO1.** Analyze the types of network topologies, layers and protocols.
- CO2.** Evaluate sub netting and routing algorithms for finding optimal paths in networks.
- CO3.** Solve problems related to flow control, error control and congestion control in data transmission.
- CO4.** Assess the impact of wired and wireless networks in the context of network protocols Like DNS, SMTP, HTTP, and FTP.
- CO5.** Apply ethical principles and standards for developing network-based solutions.
- CO6.** Work independently and in teams to solve network related problems with effective communication.

Course Correlation Mapping	3	3	-	3	-	-	-	-	3	3	-	-	3	3	3	2

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT:

MODULE 1: INTRODUCTION AND PHYSICAL LAYER

(09 Periods)

Network hardware, Network software, Reference models - OSI, TCP/IP; Example networks - Internet; Wireless LANs - 802.11.

Physical Layer - Guided transmission media, Wireless transmission, Switching - Circuit switching, Packet switching.

MODULE 2: DATA LINK LAYER AND MEDIUM ACCESS CONTROL SUBLAYER (09 Periods)

Data Link Layer: Data link layer design issues, Error detection and correction - CRC, Hamming codes; Elementary data link protocols, Sliding window protocols.

Medium Access Control Sub layer: ALOHA, Carrier sense multiple access protocols, Collision free protocols, Ethernet, Data link layer switching - Repeaters, Hubs, Bridges, Switches, Routers, Gateways.

MODULE 3: NETWORK LAYER

(09 Periods)

Network layer design issues, Routing algorithms - Shortest path algorithm, Flooding, Distance vector routing, Link state routing, Hierarchical routing, Broadcast routing, Multicast routing, Any cast routing; Congestion control algorithms, Network layer in the internet - The IP version 4 protocol, IP addresses, IP version 6, Internet control protocols, OSPF, BGP.

MODULE 4: TRANSPORT LAYER

(09 Periods)

UDP - Segment header, Remote procedure call, Real-time transport protocols; TCP - service model, Protocol, Segment header, Connection establishment, Connection release, Sliding window, Timer management, Congestion control.

MODULE 5: APPLICATION LAYER

(09 Periods)

Domain Name System (DNS) - Name space, Domain resource records, Name servers; Electronic mail - Architecture and services, User agent, Message formats, Message transfer, Final delivery; The World Wide Web - Architectural overview, HTTP, FTP.

Total Periods: 45

EXPERIENTIAL LEARNING:

LIST OF EXERCISES:

1. Implement the following data link layer framing methods.
 - i) Character count
 - ii) Character stuffing
 - iii) Bit stuffing
2. Implement the frame sorting technique used in buffers.
3. Design and develop a program to compute checksum for the given frame 1101011011 using CRC-12, CRC-16, and CRC-CCIP. Display the actual bit string transmitted. Suppose any bit is inverted during transmission. Show that this error is detected at the receiver's end.
4. Implement Dijkstra's algorithm to compute the shortest path for the given graph.

5. Develop a program to obtain routing table for each node using Distance Vector Routing Algorithm by considering the given subnet with weights indicating delay between Nodes.

6. Write a program to simulate flow-based routing.
7. Write a program to simulate random early detection congestion control algorithm.
8. Using TCP/IP sockets, write a client-server program to open a file available in the server.
9. Write a program for congestion control using leaky bucket algorithm.
10. Write a program for the Mail Client
- POP Client: Gives the server name, user name and password retrieve the mails and allow manipulation of mail box using POP commands.
 - SMTP Client: Gives the server name, send email to the recipient using SMTP commands.
11. Write a program for HTTP server to implement the commands - GET, POST, HEAD and DELETE. The server must handle multiple clients.

Exercises on Packet Tracer Simulator Tool:

12. a) Study of basic network commands and network configuration commands.
- ping
 - nslookup
 - netstat
 - ifconfig
- b) Create a network topology and configure a network topology with four PCs, two switches, and two routers.

REFERENCE BOOKS:

COURSE DESCRIPTION: This course provides a detailed discussion and hands-on experience on Introduction to Artificial Intelligence, Designing intelligent agents, Solving general purpose problems, Search in complex environments, Probabilistic reasoning, Represent knowledge and reason under uncertainty, Robotics, Ethics and safety in AI.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Architect intelligent agents using artificial intelligence techniques and principles.
- CO2.** Analyze and interpret the problem, identify suitable solutions using heuristic functions, optimization algorithms and search algorithms.
- CO3.** Select and apply appropriate knowledge representation to build Bayesian network models to reason under uncertainty.
- CO4.** Investigate robot hardware and frameworks for intelligent robotic perception.
- CO5.** Demonstrate knowledge on ethical implications of intelligent machines for providing privacy, trust, security and safety.
- CO6.** Work Independently to solve problems with effective communication.

COURSE CONTENT

Module 1 INTRODUCTION TO ARTIFICIAL INTELLIGENCE (09 Periods)

Foundations of artificial intelligence, History of artificial intelligence, State of the art, Risks and benefits of AI, Intelligent agents – Agents and environments, The concept of rationality, Structure of agents.

Module 2 PROBLEM SOLVING BY SEARCHING (09 Periods)

Problem solving agents, Search algorithms, Uninformed search strategies, Informed search strategies – Greedy best-first search, A* search; Heuristic functions.

Module 3 SEARCH IN COMPLEX ENVIRONMENTS (09 Periods)

Local search algorithms and optimization problems – Hill-climbing search, Simulated annealing, Local beam search, Evolutionary algorithms; Optimal decisions in games – The minimax search algorithm, Optimal decisions in multiplayer games, Alpha-Beta pruning, Move ordering; Monte Carlo tree search, Kalman Filter.

Module 4 PROBABILISTIC REASONING (09 Periods)

Representing Knowledge in an uncertain domain, Semantics of Bayesian networks, Probabilistic reasoning over time – Time and uncertainty, Inference in temporal models, Hidden Markov models, Kalman Filter.

Module 5 ROBOTICS, ETHICS AND SAFETY IN AI (09 Periods)

Robots, Robot hardware, Robotic perception, Alternative robotic frameworks, Application domains.

Limits of AI, Ethics of AI – Surveillance, security and privacy, Fairness and bias, Trust and transparency, AI safety.

Total Periods: 45

EXPERIENTIAL LEARNING

LIST OF EXERCISES:

1. Design and implement agent programs for Table-driven agents using the agent function of vacuum-cleaner world. The agent cleans the current square if it is dirty, otherwise it moves to the other square.
2. Implement agent programs for Simple reflex agents and Model-based reflex agents using the agent function of vacuum-cleaner world.
3. Solve the travelling sales man problem using Hill Climbing search algorithm
4. Design and implement solution for 8-puzzle problem using Greedy Best First Search.
5. Find the shortest path between a starting location and destination location in a graph using A* search algorithm.
6. Implement MiniMax algorithm for finding an optimal decision in a tic-toc game.
7. Implement Monte-Carlo Tree search intended to run on small game trees.
8. Solve the monty hall problem using Bayesian Network.
9. The game involves three doors, given that behind one of these doors is a car and the remaining two have goats behind them. So you start by picking a random door,

say #2. On the other hand, the host knows where the car is hidden and he opens another door, say #1 (behind which there is a goat). Here's the catch, you're now given a choice, the host will ask you if you want to pick door #3 instead of your first choice i.e. #2.

Implement Kalman Filter to track the aircraft by determining the position and velocity of aircraft.

10. Design and implement a stock prices forecasting model using Hidden Markov Model.

22AI102003	MACHINE LEARNING	3	-	2	-	4
Pre-Requisite	-					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION: This course provides a detailed discussion and hands-on experience on Introduction to machine learning, Bayesian concept learning, Supervised learning, Unsupervised learning, Artificial neural networks, Ensemble learning.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Analyze the process of machine learning modeling and evaluation to automatically infer a general description for a given learning problem.
- CO2.** Analyze the underlying mathematical models within machine learning algorithms and learning tasks.
- CO3.** Design and implement machine learning solutions for classification, regression, and clustering problems.
- CO4.** Design and implement efficient neural architectures to model patterns for a given learning problem.
- CO5.** Develop intelligent solutions to solve societal problems related to computer vision, information security, healthcare and other areas.
- CO6.** Work Independently to solve problems with effective communication.

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1: INTRODUCTION TO MACHINE LEARNING (09 Periods)

Machine Learning: Human learning, Types of human learning, Machine learning, Types of machine learning, Applications of machine learning, Issues in machine learning.

Preparing to Model: Machine learning activities, Types of data, Exploring structure of data, Data quality and remediation.

Module 2: MODELING AND EVALUATION, BAYESIAN CONCEPT LEARNING (09 Periods)

Modeling and Evaluation: Selecting a model, Training a model, Model representation and interpretability, Evaluating performance of a model, Improving performance of a model.

Feature Engineering: Feature transformation, Feature subset Selection.

Bayesian Concept Learning: Introduction, Importance, Bayes' theorem, Bayes' theorem and concept learning, Bayesian belief network.

Module 3: SUPERVISED LEARNING (10 Periods)

Classification: Classification model, Classification learning steps, K-Nearest Neighbor, Support vector machines, Decision Tree - Decision tree representation, Problems for decision tree learning, Decision tree learning algorithm, Hypothesis space search, Inductive bias in decision tree learning, Issues in decision tree learning.

Regression: Introduction, Simple linear regression, Improving accuracy of the linear regression model, Multiple linear regression, Assumptions and problems in regression analysis, Polynomial regression model, Logistic regression.

Module 4: UNSUPERVISED LEARNING (07 Periods)

Introduction, Unsupervised vs supervised learning, Applications of unsupervised learning, Clustering as a machine learning task, Types of clustering techniques, Partitioning methods, K-Medoids, Hierarchical clustering, DBSCAN.

Module 5: ARTIFICIAL NEURAL NETWORKS, ENSEMBLE LEARNING (10 Periods)

Artificial Neural Networks: Neural network representations, Appropriate problems for neural network learning, Perceptrons, Multilayer networks and Backpropagation algorithm, Convergence and local minima, Representational power of feedforward networks, Hypothesis space search and inductive bias, Hidden layer representations, Generalization, Overfitting, Stopping criterion.

Ensemble Learning: Bagging, Boosting, Gradient boosting.

Total Periods: 45

EXPERIENTIAL LEARNING

LIST OF EXERCISES:

1. Introduction to Python machine learning libraries.
2. Use Naïve Bayes classifier to solve the credit card fraud detection problem.
3. Implement K-Nearest Neighbor algorithm to solve classification problem.
4. Implement CART algorithm for decision tree learning. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample. Explore the

problem of overfitting in decision tree and develop solution using pruning technique.

5. Perform Exploratory Data Analysis on the given dataset. Implement CART algorithm for decision tree learning. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample.
6. Train an SVM Classifier with Linear Kernel. Use an appropriate data set for building the SVM Classifier and apply this knowledge to classify a new sample.
7. Build linear regression and multiple regression models to predict the price of the house (Boston House Prices Dataset).
8. Build a polynomial regression model for predicting the salary of the employees.
9. Build a neural network that will read the image of a digit and correctly identify the number.
10. Solve classification problem by constructing a feedforward neural network using Backpropagation algorithm. (Wheat Seed Data)

COURSE DESCRIPTION: Fundamentals of neural learning, ANN architectures, Perceptron networks, ADALINE, Radial basis functions, recurrent hopfield networks, ART networks and applications of ANN.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Understand the fundamentals of neural learning and concepts of probability density estimation
- CO2.** Construct/ Design single or multi-layer neural networks for solving real time problems.
- CO3.** Use appropriate error functions and apply suitable optimization techniques to improve the performance of the model.
- CO4.** Solve the bias-variance tradeoff issues using techniques including regularization and pruning algorithms.
- CO5.** Work independently or in team to solve problems with effective communication.

CO-PO-PSO Mapping Table

Course Outcome	Program Outcomes												Program Specific Outcomes

Course Correlation Mapping	3	3	2	-	-	3	-	-	-	-	-	-	3	-	3	-
Correlation Level:							3-High			2-Medium			1-Low			

Module 1 INTRODUCTION **(09 Periods)**

Fundamentals of Neural Learning - Classification and regression, Pre-processing and feature extraction, The curse of dimensionality, Polynomial curve fitting, Model complexity, Multivariate non-linear functions, Bayes' theorem, Decision boundaries, Minimizing risk; Probability Density Estimation- Parametric methods, Maximum likelihood, Bayesian inference

Module 2 SINGLE LAYER NETWORKS (09 Periods)

Gradient based Strategies: Learning Rate Decay, Momentum-Based Learning, Parameter-Specific Learning Rates, Cliffs and Higher-Order Instability, Gradient Clipping, Second-Order Derivatives, Polyak Averaging, Local and Spurious Minima

Module 3	MULTI-LAYER PERCEPTRON&RADIAL BASIS FUNCTIONS	(08 Periods)

Radial Basis Functions - Radial basis function networks, Network training.

Module 4 ERROR FUNCTIONS (10 Periods)

Sum-of-squares error, Minkowski error, Input-dependent variance, Modelling conditional distributions, Estimating posterior probabilities, Sum-of-squares for classification, Cross-entropy for two classes, Multiple independent attributes, Cross-entropy for multiple classes, Entropy; Parameter Optimization Algorithms - Gradient descent.

Module 5 LEARNING AND GENERALIZATION: (09 Periods)

Bias and variance, Regularization, Training with noise, Soft weight sharing, Growing and pruning algorithms, Committees of networks, Mixtures of experts.

Total Periods: 45

EXPERIENTIAL LEARNING

1. Classify spectral remote sensing data using Ordinary Least Squares and estimate the confusion matrix.
Fit, evaluate, and make predictions with the Linear Discriminant Analysis model. Also tune the hyperparameters of the model.
Implementing the Perceptron Algorithm for binary classification task and plot the decision boundary.
2. Build an employee churn prediction model using Multi-layer perceptron and evaluate the model performance with different learning rate.
3. Analyze the efficiency of a Radial Basis function network for a classification task and assess its convergence ability.
4. Evaluate the cross entropy error functions and compare its performance with the Log Loss.
5. Analyze the efficiency of L1 and L2 regularization techniques in resolving overfitting issues in multi-layer neural network model.
6. Investigate the efficiency of SGD in terms of convergence speed and accuracy with different learning rate and momentum values.

Using stacked generalization, an ensemble method build a new model to best combine the predictions from multiple existing models.

7. Using pruning algorithm reduce the complexity of a trained neural network.
Classify spectral remote sensing data using Ordinary Least Squares and estimate the confusion matrix.
Fit, evaluate, and make predictions with the Linear Discriminant Analysis model. Also tune the hyperparameters of the model.
8. Implementing the Perceptron Algorithm for binary classification task and plot the decision boundary.
9. Build an employee churn prediction model using Multi-layer perceptron and evaluate the model performance with different learning rate.
10. Analyze the efficiency of a Radial Basis function network for a classification task and assess its convergence ability.

PROGRAM CORE

CourseCode	CourseTitle	L	T	P	S	C
22AI101020	PATTERN RECOGNITION TECHNIQUES	3	-	-	-	3
Pre-Requisite	Numerical Methods, Probability and Statistics					

COURSE DESCRIPTION: This course provides a discussion on the fundamental principles and techniques of pattern recognition. The course further delves into feature space inspection, transformation and dimensionality reduction of feature space using principal component analysis, independent component analysis, multiple-discriminant analysis and introduces bag of words approach. The course then covers Bayesian decision theory, parameter-estimation methods and special classifiers.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Demonstrate knowledge on the fundamental concepts, principles of pattern recognition and apply them to design and develop effective pattern recognition system.
- CO2.** Identify and select appropriate features, inspect feature spaces and apply transformations, normalization to feature space for effective comparison and classification.
- CO3.** Apply dimensionality reduction methods to reduce the complexity of feature spaces, enhance classification accuracy and extract meaningful information from high dimensional data.
- CO4.** Analyze and apply Bayesian, minimax classifier to interpret optimal decision regions and make decisions under uncertainty.
- CO5.** Apply parameter estimation methods to estimate the parameters of probability distributions.
- CO6.** Apply different classification techniques to diverse datasets and evaluate their performance using appropriate metrics.

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSECONTENT

Module 1: FUNDAMENTALS AND FEATURES (10 Periods)

Goals of pattern recognition, Structure of a pattern recognition system, Abstract view of pattern recognition, Design of a pattern recognition system, Features-Types of features and their traits, Feature space inspection, Transformations of feature space, Measurement of distances in feature space, Normalization.

Module 2: DIMENSIONALITY REDUCTION OF FEATURE SPACE (09 Periods)

Selection and construction of features, Dimensionality reduction of the feature space- Principal component analysis, Kernelized principal component analysis, Independent component analysis, Multiple discriminant analysis, Dimensionality reduction by feature selection, Bag of words.

Module 3: BAYESIAN DECISION THEORY (07 Periods)

General considerations, The maximum a posteriori classifier, Bayesian classification-The Bayesian optimal classifier, Reference example-Optimal decision regions, The minimax classifier, Normally distributed features, Arbitrarily distributed features.

Module 4: PARAMETER ESTIMATION (09 Periods)

Maximum likelihood estimation, Bayesian estimation of the class-specific distributions, Bayesian parameter estimation, Least squared estimation error, Constant penalty for failures, Parameter free methods-The Parzen window method; Dimensionality of the feature space, Overfitting.

Module 5: SPECIAL CLASSIFIERS (10 Periods)

Linear discriminants, The perceptron, Linear regression, Artificial neural networks, Auto encoders, Deep learning, Matched filters, Classification of sequences, Classification with nominal features-Random forests, String matching, Grammars; Classifier-Independent concepts -Learning theory, Empirical evaluation of classifier performance, Boosting, Rejection.

TotalPeriods:45

EXPERIENTIAL LEARNING

1. Perform dimensionality reduction using Principal Component Analysis

- Start by acquiring a dataset suitable for PCA. Use publicly available datasets or explore data repositories like Kaggle or UCI Machine Learning Repository. Choose a dataset with multiple numerical features.
- **Preprocess the Data:** Before applying PCA, preprocess the dataset by handling missing values, scaling features, and dealing with any categorical variables. PCA works best with numerical data, so ensure that all features are numeric.
- **Implement PCA:** Next, implement PCA using a machine learning library such as scikit-learn in Python. Import the necessary libraries, load your dataset, and apply PCA to the feature matrix. Specify the desired number of principal components to retain.
- **Analyze Explained Variance:** After applying PCA, analyze the explained variance ratio to understand how much variance each principal component captures. Plot a cumulative explained variance plot to determine the optimal number of principal components to retain.
- **Visualize Principal Components:** To gain insights from the data, visualize

the principal components. Select two or three principal components and create scatter plots, coloring the data points based on their class or target variable. This visualization can help identify patterns, clusters, or separability in the transformed feature space.

- **Feature Reconstruction:** Perform feature reconstruction by reconstructing the original features using a subset of the principal components. This step helps understand the contribution of each principal component to the overall data reconstruction.
- **Evaluate Performance:** If the dataset includes a target variable, evaluate the performance of a machine learning algorithm (e.g., classification or regression) on the original dataset and compare it with the performance on the PCA-transformed dataset.

(It's an indicative one. The Course Instructor may change the activities and the same shall be reflected in Course Handout)

EXPERIENTIAL LEARNING

Arrays and vectorized computation using NumPy - The NumPy ndarray, Fast element-wise array functions, Linear algebra, Pseudorandom number generation, Process of exploring data, Pandas data structures - Data frame; Essential functionality, Summarizing and computing descriptive statistics - Correlation and covariance, Unique values, Value counts and membership; Data loading, Storage and file formats - Reading and writing data in text format.

1. Array Computations using NumPy
 - a) Perform arithmetic operations using array.
 - b) Perform slicing and indexing on multi-dimensional arrays.
 - c) Compute arithmetic mean, standard deviation, variance, percentile, minimum and maximum, cumulative sum and product using statistical functions in NumPy.
2. Linear Algebra and Random Number generation using linalg in NumPy
 - a) Compute dot product, vector product and inner product of two arrays.
 - b) Perform matrix operations such as multiplication, determinant, sum of diagonal elements and inverse.
3. Linear Algebra and Random Number generation using linalg and random module in NumPy
 - a) Compute eigenvalues, eigenvectors and singular value decomposition for a square matrix.
 - b) Generate random samples from uniform, normal, binomial, chi-square and Gaussian distributions using numpy.random functions.
4. Data Manipulation using pandas
 - a) Create DataFrame from List, Dict, List of Dicts and perform operations such as column selection, addition, deletion and row selection.
5. Data Manipulation using pandas
 - a) Create a DataFrame and perform descriptive statistics functions such as sum, mean, median, mode, standard deviation, skewness, kurtosis, cumulative sum, cumulative product and percent changes.
 - b) Implement the computation of correlation and covariance by considering the DataFrames of stock prices and volumes obtained from Yahoo Finance! Using pandas-datereader package.
6. ing with different data formats using pandas
 - a) Perform reading and writing data in text format using read_csv and read_table considering any online dataset in delimited format (CSV).
 - b) Perform reading and writing of Microsoft Excel Files (xlsx) using read_excel.

Handling missing data - Identifying missing data, NA handling methods, Filtering missing values, Filling missing values, Remove duplicated; Data transformation - map and replace method, creating transformed version of original dataset, creating dataframes with normally distributed data.

7. Cleaning and Preparation
 - a) Perform data cleaning by creating a DataFrame and identifying missing data using NA(Not Available) handling methods, filter out missing data using dropna function, fill the missing data using fillna function and remove duplicates using duplicated and drop_duplicates functions.

8. Cleaning and Preparation

- a) Perform data transformation by modifying set of values using map and replace method and create transformed version of original dataset without modification using rename method.
- b) Create a DataFrame with normally distributed data using random sampling and detect possible outliers.

Plotting and visualization - A brief introduction to Plotly Express, Plotting with pandas and Plotly Express; Visualization Plots - Scatter Plots, Line Chart, Bar Chart, Stacked Bar Chart.

9. Perform Data Visualization with Plotly Express considering online datasets for processing.

- a) Create a scatter plot to visualize the relationship between the GDP per Capita vs Life Expectancy to see if there are correlated.

https://www.plotlybook.xyz/chapter_05.html#scatter-plot)

- b) Create Line Chart to view how life expectancy of USA has changed over time. (https://www.plotlybook.xyz/chapter_05.html#line-chart)

10. Perform Data Visualization with Plotly express considering online dataset for processing.

- a) Create bar chart by taking an online dataset (<https://plotly.com/python/bar-charts/#bar-chart-with-plotly-express>).
- b) Create a stacked bar chart by taking an online dataset (<https://plotly.com/python/bar-charts/#bar-chart-with-plotly-express>).

22CB102006

INTERNET OF THINGS

3 - 2 - 4

Pre-Requisite Computer Networks

Anti-Requisite -

Co-Requisite -

COURSE DESCRIPTION: This course provides a detailed discussion on Internet of Things Components; Domain Applications; Communication models; Sensors; Connectivity; Prototyping; Hardware; Design Methodology; Development platforms; Data Analytics for IoT; IoT Security..

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Understand IoT Architectures , communication technologies and various applications of IoT
- CO2.** Demonstrate knowledge on IoT-related protocols and Smart Objects
- CO3.** Understand hardware platforms and cloud services related to IoT
- CO4.** Build IoT applications using Arduino and Raspberry Pi
- CO5.** Understand data analytics concepts and security issues in the context of IoT
- CO6.** Work independently and in teams to develop IoT applications with effective communication.

COURSE CONTENT

Module 1: INTRODUCTION & DOMAIN APPLICATIONS

(09 Periods)

Introduction to Internet of Things:

Definition, Conceptual Framework, Architectural View, Technology behind IoT, Communication Technologies, Data Enrichment, Data consolidation and Device management at Gateway.

IoT and M2M: M2M, Difference between IoT and M2M, SDN and NFV for IoT.

Domain Specific IoTs: Home automation, Cities, Environment, Health and Life Style.

Module 2: SENSORS & CONNECTIVITY**(09 Periods)**

Sensor Technology, Actuators, RFID Technology, Internet Connectivity, Internet-Based Communications, IP Addressing in the IoT, Medium Access Control, Application Layer Protocols.

Module 3: PROTOTYPING & HARDWARE**(08 Periods)**

Embedded Computing Basics, Embedded platforms for prototyping, Things always connected to the Internet/Cloud, Amazon Web Services for IoT.

Module 4: DESIGN METHODOLOGY & CASE STUDIES**(10 Periods)**

Design Methodology: Purpose and Requirements specifications, Process Specifications, Domain Model Specification, Information Model Specification, Service Specification, IoT Level Specifications, Functional View Specification, Operational View Specification, Device and Component integration, Application development.

Case Studies Illustrating IoT Design: Home Automation, Cities.

Module 5: DATA ANALYTICS FOR IOT& IoT Security**(09 Periods)**

Data Analytics for IoT: Apache Hadoop, Using Hadoop MapReduce for Batch Data Analysis.

IoT Security: Vulnerabilities, Security Requirements and Threat analysis, Security Tomography and Layered Attacker Model, Identity Management and Establishment, Access Control and Secure Message Communication, Security Models, Profiles and Protocols for IoT

Total Periods: 45**EXPERIENTIAL LEARNING**

1. (a) Design and Simulate LED 7-Segment Display interfacing with Arduino.
(b) Design and Simulate Servo motor interfacing with Arduino.
2. (a) Design and Simulate ultrasonic sensor and LCD interfacing with Arduino.
(b) Design and Simulate Flame Sensor interfacing with Arduino.
3. Design and Implement to capture Gas Sensor and send sensor data to cloud from your NodeMCU device using Arduino IDE.
4. Design and Implementation of Humidity and Temperature Monitoring Using Arduino and upload data to cloud using MQTT.
5. Design and Implementation of an IoT ECG (Electrocardiogram) System to record hearts electrical activity.
6. Design and Simulate controlling an LED 7-Segment Display with Raspberry Pi.
7. Design and implementation of Raspberry Pi Home Security System with Camera and PIR Sensor with Email Notifications.
8. Design and Implement to upload Light sensor (TSL) data to cloud through Raspberry Pi.
9. Design and Implementation of Motion Detector with NodeMCU and BLYNK.
10. Design and Implementation of Fire notification IoT system with BLYNK.

COURSE DESCRIPTION: Hyper Text Markup Language (HTML); Features of HTML5; Cascading Style Sheets (CSS); JavaScript; JQuery; Bootstrap; Hypertext Preprocessor (PHP); MySQL.

COURSE OUTCOMES: After successful completion of this course, the students will be able to:

- CO1.** Demonstrate knowledge on web page design elements, dynamic content and database connection.
- CO2.** Analyze user requirements to develop web applications.
- CO3.** Design client-server applications using web technologies.
- CO4.** Demonstrate problem solving skills to develop enterprise web applications.
- CO5.** Apply HTML, CSS, JavaScript, JQuery, Bootstrap and PHP technologies for device independent web application development.
- CO6.** Apply web technologies to develop interactive, dynamic and scalable web applications for societal needs.

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT:

Module-1: HTML

(09 periods)

Introduction: Fundamentals of HTML, Working with Text, Organizing Text in HTML, Working with Links and URLs, Creating Tables, Working with Images, Canvas, Forms, Frames and Multimedia.

HTML5: Introduction, HTML5 Document Structure, Creating Editable Content, Checking Spelling Mistakes, Exploring Custom Data Attributes, Client-Side Storage, Drag and Drop Feature, Offline

Web Applications, Web Communications, Cross-Document Messaging and Desktop Notifications.

Module-2: CSS AND JAVASCRIPT

(10 periods)

CSS: Introduction, CSS Selectors, Inserting CSS in an HTML document, Backgrounds, Fonts, and Text Styles, Creating Boxes, Displaying, Positioning and Floating Elements, Features of CSS3, Media Queries.

Javascript: Overview of JavaScript, JavaScript Functions, Events, Image Maps and Animations, JavaScript Objects, Working with Browser and Document Objects, JQuery - Introduction, JQuery Selectors, Events, Methods to access HTML elements and attributes, Introduction to AJAX.

Module-3: BOOTSTRAP

(09 periods)

Getting Started with Bootstrap, Creating Responsive Layouts Using Bootstrap CSS - Basic HTML structure for Bootstrap, Responsive classes, Rendering images, The grid system, Constructing data entry forms, Packaged Components in Bootstrap - The page header, Glyphicons, The navigation bar, Badges, Alerts, Toolbars and button groups, Panels.

Module-4: INTRODUCTION TO PHP

(09 periods)

Introduction, Data Types, Variables, Constants, Expressions, String Interpolation, Control Structures, Functions, Arrays, Embedding PHP Code in Web Pages, Object Oriented PHP.

Module-5: PHP WEB FORMS AND MYSQL

(08 periods)

PHP Web forms: PHP and Web Forms, Sending Form Data to a Server, Working with Cookies and Session Handlers

PHP with MySQL: Interacting with the Database, Prepared Statement, Database Transactions.

Total Periods: 45

EXPERIENTIAL LEARNING

List of Exercises:

1. Design the following static web pages of an online book store web application.

a. Home Page:

Logo		Name of the Book Store			
<i>Home</i>		<i>Latest Arrivals</i>	<i>Best Sellers</i>	<i>Contact Us</i>	<i>Search</i>
Computers Electronics Electrical Bio-Tech	Description of the Book Store (Images, Scroll Text, etc)			Username Password Sign-in <i>New User</i> Create an Account	

b. Catalogue Page:

The catalogue page should display the following details of available books.

i. Snap shot of cover page	ii. Title of the text book	iii. Author name
iv. Publisher	v. Price	vi. More details link.

Logo	Name of the Book Store			
<i>Home</i>	<i>Latest Arrivals</i>	<i>Best Sellers</i>	<i>Contact Us</i>	<i>Search</i>
Computers Electronics Electrical Bio-Tech	 HTML5 Black Book Kogent Learning Solutions Dreamtech Press Rs. 570/- More Details  Beginning PHP and MySQL 4th Edition W Jason Gilmore Apress Rs. 520/- More Details			

c. Registration Page:

Design the Registration page with the following fields and navigate it with create an account link.

i. First Name	ii. Last Name	iii. Gender
iv. Date of Birth	v. Username	vi. Password
vii. Confirm Password	viii. Address	ix. Postal Code
x. Mobile No.	xi. Email-Id	

2. a. Design a web page to store username and password information using the local storage concept.
- b. Design a web page to store employee information including Name, Emp. Id, Department, Salary and Address on a client's machine using a real SQL database.
3. Apply the following styles to all web pages of online book store web application.
 - a. Fonts and Styles: font-family, font-style, font-weight and font-size
 - b. Backgrounds and colors: color, background-color, background-image and background-repeat
 - c. Text: text-decoration, text-transformation, text-align and text-indentation, text-align
 - d. Borders: border, border-width, border-color and border-style
 - e. Styles for links: A: link, A: visited, A:active, A:hover
 - f. Selectors, Classes, Layers and Positioning elements.
4. Write a JavaScript/JQuery code to validate the following fields of the Registration web page.
 - a. First Name/Last Name - should contain only alphabets and the length should not be less than 8 characters.
 - b. Username - It should contain combination of alphabets, numbers and underscore. It should not allow spaces and special symbols.
 - c. Password - It should not less than 8 characters in length and it contains one uppercase letter and one special symbol.
 - d. Date of Birth - It should allow only valid date; otherwise display a message stating that entered date is invalid. Ex. 29 Feb. 2009 is an invalid date.
 - e. Postal Code: It must allow only 6 digit valid number.
 - f. Mobile No. - It should allow only numbers and total number of digits should be equal to 10.
 - g. e-mail id - It should allow the mail id with the following format:
Ex. mailid@domainname.com
5. Design a web page with the following features using HTML5, JavaScript and JQuery
 - a. Displaying of images with Custom animated effects
 - b. Playing of selected video from the list of videos

- c. Showing the animated text in increasing and decreasing font size
 - d. Changing the size of the area in a web page using DIV tag
 - e. Hiding and Showing elements in a web page.
6. Design a web page with the following features using Bootstrap and Media Query.
- a. Components
 - b. Responsive tables
 - c. Responsive images and videos
 - d. Toolbars, Buttons and Lists
7. a. Deploy and navigate web pages of online book store using WAMP/XAMPP web server.
b. Write a PHP program to read user name and favorite color from the HTML form. Display the name of the user in green color and sets user favorite color as a background for the web page.
8. Write a PHP code to read the username and password entered in the Login form of the online book store and authenticate with the values available in cookies. If user enters a valid username and password, welcome the user by username otherwise display a message stating that, entered details are invalid.
9. Write a PHP code to read user details entered through the registration web page and store the same into MySQL database.
10. Write a PHP code for storing books details like Name of the book, author, publisher, edition, price, etc into MySQL database. Embed a PHP code in catalogue page of the online book store to extract books details from the database.

Pre-Requisite Software Engineering

Anti-Requisite -

Co-Requisite -

COURSE DESCRIPTION: Introduction to UML, Basic structural modeling; Advanced structural modeling, Class and object diagrams; Basic behavioral modeling; Advanced behavioral modeling; Architectural modeling.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Demonstrate knowledge on principles of object oriented analysis and design through UML Diagrams.
- CO2.** Analyze user requirements and identify suitable structural and behavioral modeling components.
- CO3.** Design and develop UML models for real time software applications.
- CO4.** Solve real world problems by applying structural and behavioral modeling techniques.
- CO5.** Use unified modeling language in preparing blue prints for software solutions.

COURSE CONTENT

MODULE-I: INTRODUCTION TO UML AND BASIC STRUCTURAL MODELING (11 Periods)

Introduction to UML: Importance of modeling, Principles of modeling, Object oriented modeling, An overview of UML, Conceptual model of the UML, Architecture, Software development life cycle. Basic Structural Modeling: Classes-Terms and concepts, Common modeling techniques; Relationships-Modeling simple dependencies, Single inheritance and structural relationships; Common mechanisms, Diagrams.

MODULE -II: ADVANCED STRUCTURAL MODELING, CLASS AND OBJECT DIAGRAMS

(07 Periods)

Advanced Structural Modeling: Advanced classes, Advanced relationships, Interfaces, Types and roles, Packages, Instances. Class and Object Diagrams: Terms and concepts, Modeling techniques for class diagram-Modeling simple collaboration, Logical database schema, Forward and reverse engineering; Introduction to object diagrams.

MODULE -III: BASIC BEHAVIORAL MODELING

(09 Periods)

Basic Behavioral Modeling-I: Interactions-Terms and concepts, Modeling a flow of control; Interaction diagrams-Terms and concepts, Modeling flows of control by time ordering and control by organization, Forward and reverse engineering. Basic Behavioral Modeling-II: Use cases-Terms and concepts, Modeling the behavior of the element; Use case Diagrams-Terms and concepts, Modeling the context of a system, Requirement of a system, Forward and reverse engineering; Activity Diagrams-Terms and concepts, Modeling a workflow, modeling an operation, Forward and reverse engineering.

MODULE -IV: ADVANCED BEHAVIORAL MODELING

(07 Periods)

Events and signals-Modeling a family of signals, exceptions; State machines-Modeling the lifetime of an object; Introduction to processes and threads, Time and space-Modeling timing constraints, Distribution of objects and objects that migrate; State chart diagrams-Modeling reactive objects, Forward and reverse engineering.

MODULE -V: ARCHITECTURAL MODELING

(11 Periods)

Component-Terms and concepts, Modeling executables and libraries, Modeling tables, Files and documents, Modeling an API; Deployment-Modeling processors and devices, Modeling the distribution of components; Component diagrams-Modeling source code, Executable release, Physical database, Adaptable systems, Forward and reverse engineering; Deployment diagrams-Modeling an embedded systems, Client/Server system, Fully distributed systems, Forward and reverse engineering.

Total Periods: 45

EXPERIENTIAL LEARNING

Case-Studies

1. **AUTOMATED TELLER MACHINE (ATM)** Problem Statement: Software is designed for supporting a computerized ATM banking network. All the process involved in the bank is computerized these days. All the accounts maintained in the bank and also the transactions effected, including ATM transactions are to be processed by the computers in the bank. An ATM accepts a relevant cash card, interacts with user, communicates with the central system to carry out the transaction, dispenses cash, and prints receipts. The system to be designed and implemented must include appropriate record keeping and security provisions. The system must handle concurrent access to the same account.
2. **ONLINE TICKET RESERVATION FOR RAILWAYS** Problem Statement: Computer play an integral part of the day in today's life. It makes the entire job easier and faster, every job is computerized so that the ticket reservation can be done over the online ticket reservation system. During the booking of the ticket reservation, passenger has to select origin, date of journey, destination, class of train etc. The reservation counter keeps track of passenger's information. Thus, the system will have all the details about the trains and facilities provided

by them. There are various trains with the different level of convenience for the passengers. The whole database will be maintained by database administrator. There are varieties of trains where the passengers can select the train according to the convenience for their destination journey. The journey could be within the state or across the India. Each train has the three types of classes i.e. Sleeper class, First class and AC compartment. Design the application for the above problem description.

MINI-PROJECT

1. Prepare the complete UML diagrams required for the online student course registration system for university, and hospital management system.

COURSE DESCRIPTION: This course provides discussion and hands-on experience on machine learning pipeline, Feature Scaling, Selection, Text parsing, Vectorization, Classification, Hashing, Dimensionality Reduction, non-linear Featurization, Feature Extraction, End-to-End learning with Deep Neural architectures.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1** Perform pre-processing of data sets to build efficient machine learning models
- CO2** Transform text and image data into a more suitable form for further processing and building machine learning model
- CO3** Analyze the given problem and design suitable feature engineering strategy
- CO4** Reduce the dimensionality of the data and select optimal subset of the feature set
- CO5** Implement automated feature extraction using deep learning architectures
- CO6** Work independently to solve problems with effective communication

COURSE CONTENT

Module1 INTRODUCTION

(09 Periods)

Machine Learning Pipeline, Scalars, Vectors, and Spaces, Log transformation, Feature Scaling or Normalization, Feature Selection, TextData-Bag-of-X: Turning Natural Text into Flat Vectors, Filtering for Cleaner Features, Parsing and Tokenization, Collocation Extraction for Phrase Detection.

Module2 FEATURE SCALING

(09 Periods)

Term Frequency & Inverse Document frequency, Scaling Bag-of-Words with Tf-Idf Transformation, Classification with Logistic Regression, Tuning Logistic Regression with Regularization, Encoding Categorical Variables, Feature Hashing, Bin-Counting.

Module3 DIMENSIONALITY REDUCTION

(09 Periods)

Intuition, Derivation, Linear Projection, Variance and Empirical Variance, Principal Components: First Formulation, Principal Components: Matrix-Vector Formulation, General Solution of the Principal Components, Transforming Features, Whitening and ZCA, Considerations and Limitations of PCA.

Module4 NONLINEAR FEATURIZATION

(09 Periods)

K-Means Clustering, Clustering as Surface Tiling, k-Means, Featurization for Classification, Alternative Dense Featurization.

Module5 IMAGE FEATURE EXTRACTION AND DEEP LEARNING

(09 Periods)

Feature Extraction- SIFT and HOG, Image Gradients, Gradient Orientation Histograms, SIFT Architecture; Learning Image Features with Deep Neural Networks- Fully Connected Layers, Convolutional Layers.

Total Periods: 45

EXPERIENTIAL LEARNING

1. Visualize the distribution of review counts of yelp business reviews before and after log transform, and Box-Cox transformed counts.
Dataset: <https://www.kaggle.com/datasets/omkarsabnis/yelp-reviews-dataset>
2. Visualize the distribution of data with different features scaling methods on online news popularity data set for article word count.
Dataset: <https://www.kaggle.com/datasets/deepakshende/online-news-popularity>

PROGRAM ELECTIVE

Course Code	Course Title	L	T	P	S	C
22CS102008	ADVANCED JAVA PROGRAMMING	3	-	2	-	4

Pre-Requisite Object Oriented programming through Java

Anti-Requisite -

Co-Requisite -

COURSE DESCRIPTION: This course shall explain methods to develop, compile, debug, and run advanced Java programs. It covers the advanced Java language, including its on key portion of the Java API library, such as the Collections Framework, the stream library, and the concurrency utilities.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1** Concept of Lambda expressions using variable capture, Generic and method references
- CO2** Design and Analysis the Database connection using jdbc programs
- CO3** Implement Servlets and cookies concepts using server
- CO4** Using Regular Expressions, networking And client server using RMI
- CO5** Use Synchronizers effectively for the interaction between multiple threads

CO-PO-PSO Mapping Table:

Course Outcomes	Program Outcomes												Program Specific Outcomes

2:Medium;

1:Low

COURSECONTENT

Module1 LAMBDAEXPRESSIONS

(09 periods)

Introduction-functional interfaces-blocklambda expressions-generic functional interfaces-passing lambda expressions as arguments-exceptions-variable capture-method references to static methods-method references to instance methods-method references with generics

Module2 JDBC

(09 Periods)

Introduction-JDBCdrivers-JDBC architecture-JDBC classes and interfaces-loading drivers-making a connection-execute SQL statement-SQL statements-retrieving result-scrollable and updatable result set.

Module3 SERVLETS

(09 Periods)

Server-side Java-Advantages over applets-servlet architecture-life cycle- generic servlet-HTTP Servlet-passing parameters to servlets-retrieving parameters-Cookies-problem with servlet.

Module4 REGULAREXPRESSION

(09 Periods)

Processing Regular Expression-Pattern-Matcher -Syntax-Two pattern matching option.Remote Method Invocation: A Simple Client/Server Application Using RMI.Networking:Basics-java.net-Inet Address-TCP/IPclient sockets-TCP/IP server sockets-Datagrams.

Module5 CONCURRENCYUTILITIES

(09 Periods)

ConcurrentAPI packages-Synchronization objects- Executor-Concurrent collections-Locks -Atomic operations-Parallel Programming.

EXPERIENTIAL LEARNING

1. Write a java program to find the factorial using Generic functional interface in lambda expressions?
2. Write a Java program to implement a lambda expression to find the second largest element in an array.
3. Write a java program that connects to a database using JDBC and does add, delete, modify and retrieve operations.
4. Write a java program for call a stored statement to execute a stored procedure in jdbc?
5. Write a servlet program which retrieves the data from database
6. Write a java program to demonstrate a Http servlet?
7. Write a Java program that implements a simple client/server application. The client sends data to a server. The server receives the data, uses it to produce a result, and then sends the result back to the client. The client displays the result on the console. For ex: The data sent from the client is the radius of a circle, and the result produced by the server is the area of the circle.(Use java.net)
8. Write a Java program to retrieve the information from the given URL? (Note: Read the URL from Command Line Arguments).
9. Demonstrate multi-threading with concurrency control implementation.
10. Perform string (Email and password) validation using regular expression.

22CS102006	COMPILER DESIGN	3	-	2	-	4

Pre-Requisite Theory of Computation

Anti-Requisite -

Co-Requisite -

COURSE DESCRIPTION: Lexical analysis; Parsers; Run Time Environments; Syntax Directed Translation; Type checking; Code Optimization; Code Generation and Compiler tools.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Demonstrate knowledge on the phases involved in design of compilers..
- CO2.** Analyze code optimization Techniques..
- CO3.** Design experiments for implementing parsing techniques.
- CO4.** Synthesize rules in compiler to demonstrate semantic attribution during Parsing.
- CO5.** Use compiler construction tools such as LEX and YACC for designing a Parser.

COURSE CONTENT

MODULE I– INTRODUCTION TO COMPILER AND LEXICAL ANALYSIS (09 Periods)

Structure of a compiler, Interpretation- Interpreters, Recursive interpreters, Iterative interpreters. Lexical Analysis: The Role of the Lexical Analyzer, Input Buffering, Specification of Tokens, The Lexical-Analyzer Generator LEX.

MODULE II – SYNTAX ANALYSIS (09 Periods)

The Role of the Parser, Eliminating Ambiguity, Eliminating of Left Recursion and Left
B.Tech.Computer Science and Engineering (AI and ML)

Factoring. Top-Down Parsing: Recursive descent parsing, Non Recursive Predictive parsing, LL (1) Grammars, A traditional top-down parser generator—YACC
Bottom-Up Parsing: Shift reduce parsing, LR parsers – Simple LR parser, Canonical LR parser, LALR parser, Using Ambiguous Grammars.

MODULE III – SYNTAX DIRECTED TRANSLATION AND TYPE CHECKING (09 Periods)

Syntax directed definition, S-attributed and L-attributed definitions, Construction of syntax trees. Type Checking: Type Expressions, Type Equivalence, Rules for Type Checking, Type Conversions, Overloading of Functions and Operators.

MODULE IV – INTERMEDIATE CODE GENERATOR AND RUN TIME ENVIRONMENTS

(09 Periods)

Preprocessing the intermediate code, Preprocessing of expressions, Preprocessing of if-statements and goto statements, Preprocessing of routines, Variants of Syntax Trees, Three Address Code, Boolean expressions, Flow-of-Control Statements, Control- Flow Translation of Boolean Expressions.

Run time Environments: Storage organization, Stack Allocation of Space, Access to Nonlocal Data on the Stack.

MODULE V – CODE OPTIMIZATION AND CODE GENERATION (09 Periods)

Basic Blocks and Flow Graphs, Optimization of Basic Blocks, The principal sources of optimization, Introduction to data flow analysis.

Code Generation: Issues in the Design of a Code Generator, The Target Language, Simple Code Generator, Peephole optimization, Register allocation and assignment.

Total Periods: 45

EXPERIENTIAL LEARNING

1. Write a LEX Program to scan reserved word & Identifiers of C Language language.
2. Implement Predictive Parsing algorithm.
3. Write a C program to generate three address code.
4. Implement SLR(1) Parsing algorithm.
5. Design LALR bottom up parser for the given language.
6. Write a C program for implementing the functionalities of predictive parser for the mini language specified in Note 1.
7. Write a C program for construction of LL (1) parsing.
8. Write a C program for constructing recursive descent parsing.

9. Implement a desk calculator using operator precedence parsing.

10. Consider the syntax of a programming language construct such as while-loop --

```
while ( condition )
```

```
begin
```

```
    statement ;
```

```
    :
```

```
end
```

where while, begin, end are keywords; condition can be a single comparison expression (such as $x == 20$, etc.); and statement is the assignment to a location the result of a single arithmetic operation (eg., $a = 10 * b$).

Write a program that verifies whether the input follows the above syntax.

Pre-Requisite Programming for Problem Solving

Anti-Requisite -

Co-Requisite -

COURSE DESCRIPTION: Concepts on Linux Programming; Shell Programming; Process, Signals and File System Structure; Inter process Communications and Socket Programming for Client-Server Interaction.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Demonstrate knowledge on
 - ☐ Shell programming
 - ☐ File Structure and System Calls
 - ☐ Processes management and handling signals,
 - ☐ IPC and Sockets
- CO2.** Analyze shell scripts and system calls related to Linux Environment.
- CO3.** Design shell scripts and system calls for specified computational problems
- CO4.** Use appropriate shell scripts and system calls for solving complex problems.
- CO5.** Provide appropriate Linux solutions for real time applications

Course Correlation Mapping	3	3	3	-	-	-	2	2	-	-	2	-	3	-	3

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

MODULE-I: INTRODUCTION TO LINUX AND LINUX ENVIRONMENT (09 Periods)

The GNU project and the Free Software Foundation, Linux distributions, Programming Linux - Linux programs, Text editors, The C Compiler; Program arguments - getopt, getopt_long. Environment variables - Use of environment variables, The environ variable, Time and Date, User information, Host information.

MODULE-II: SHELL PROGRAMMING (09 Periods)

Necessity of shell programming, Pipes and redirection - Redirecting output, Redirecting input, Pipes, The Shell as a programming language - Interactive programs, Creating a script, Making a script executable, Shell syntax - Variables, Conditions, Control structures, Functions, Commands, Command execution.

MODULE-III: FILE SYSTEM STRUCTURE AND SYSTEM CALLS (09 Periods)

Linux File Structure and Commands: File structure - Directories, Files and devices, System calls and Device drivers; Library functions - Low-level file access, write, read and open commands, Initial permissions, Other system calls for managing files; File and directory maintenance commands - chmod, chown, unlink, link, symlink, mkdir, rmdir, chdir, getcwd.

Input-Output Commands: The standard I/O library commands - fopen, fread, fwrite, fclose, fflush, fseek, fgetc, getc, and getchar, fputc, putc and putchar, fgets and gets; Formatted input and output commands - printf, fprintf, sprintf, scanf, fscanf, sscanf.

MODULE-IV: PROCESS AND SIGNALS (08 Periods)

Process structure - Process table, Viewing processes, System processes, Process scheduling; Starting new processes - Waiting for a process, Zombie processes, Input and output redirection, Threads; Signals - Sending signals, Signal sets.

MODULE-V: INTER-PROCESS COMMUNICATION AND SOCKETS (10 Periods)

Inter-Process Communication: Pipe definition, Process pipes, Sending output to popen - Passing more data, popen, implementation, The pipe call; Parent and child processes - Reading closed pipes, pipes used as standard input and output; Named pipes - FIFOs, Accessing a FIFO, Client/Server using FIFOs.

Socket Connections: Socket attributes, Creating a socket, Socket addresses, Naming a socket, Creating a socket queue, Accepting connections, Requesting connections, Closing a socket, Socket communications, Host and network byte ordering.

Total Periods: 45

EXPERIENTIAL LEARNING

1. Write a shell script to find the sum, the average and the product of the four integers entered
2. Write a shell program to exchange the values of two variables
3. Find the lines containing a number in a file

Echo "Enter filename"

Read filename

Grep [0-9] \$filename

4. Write a shell script to display the digits which are in odd position in a given 5 digit number
5. Write a shell program to reverse the digits of five digit integer.
6. Write a shell program to convert all the contents into the uppercase in a particular file.
7. Find occurrence of particular digit in inputted number.
8. Write a shell program to find the position of substring in given string.
9. Write shell script to print alternate digits when a 7 digit number is passed as input
10. Write shell script to generate fibonacci series

COURSE DESCRIPTION: This course is a practical introduction to React Native, the JavaScript framework for writing and deploying fully featured mobile apps that look and feel native. The students will learn how to build applications that target iOS, Android, and other mobile platforms instead of browsers.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Understand the lifecycle of the components in React and build a basic native mobile application
- CO2.** Realize the difference between HTML elements and Native components including platform specific components.
- CO3.** Detect the platform in which app is running and implement platform-specific code.
- CO4.** Debug the JavaScript code in applications using debugging tools.
- CO5.** Configure, test, and deploy the applications with respect to the platform.

COURSE CONTENT

Module 1 INTRODUCTION

(09 periods)

React Native – Advantages – Drawbacks - Rendering Lifecycle - Creating Components in React Native - Host Platform APIs - Building a Weather App

Module 2 COMPONENT FOR MOBILE

(09 periods)

Analogies Between HTML Elements and Native Components - Touch and Gestures - Organizational Components - Platform-Specific Components - Declaring and Manipulating Styles

Module 3 PLATFORM APIS

(09 periods)

Using Geolocation - Accessing the User's Images and Camera - Storing Persistent Data with AsyncStore - The SmarterWeather Application

Module 4 DEBUGGING AND DEVELOPER TOOLS

(09 periods)

JavaScript Debugging Practices, Translated - React Native Debugging Tools – Debugging Beyond JavaScript – Type-Checking with flow - Modeling and Storing Data

Module 5 DEPLOYMENT IN IOS

(09 periods)

Preparing Xcode Project - Uploading Application - Creating an Archive - Creating an App in iTunes Connect - Beta Testing with TestFlight

Deploying Android Applications - Building the APK for Release - Distributing via Email or Other Links - Submitting Your Application to the Play Store.

Total Periods: 45

EXPERIENTIAL LEARNING

1. Develop an application that uses GUI components, Font and Colors
2. Develop an application that uses Layout Managers and event listeners.
3. Develop a native calculator application.
4. Write an application that draws basic graphical primitives on the screen.
5. Develop an application that makes use of database.
6. Develop an application that makes use of RSS Feed.
7. Implement an application that implements Multi-threading
8. Develop a native application that uses GPS location information.
9. Implement an application that writes data to the SD card.
10. Implement an application that creates an alert upon receiving a message.

COURSE DESCRIPTION: Mobile platforms; Mobile User Interface and tools; Introduction to Android; Activities; Views; Menus; Database Storage; SMS; e-mail; Displaying Maps; Building a Location Tracker Web Services Using HTTP; Sockets Programming; Communication between a Service and an Activity; Introduction to iOS.

COURSE OUTCOMES: After successful completion of this course, the students will be able to:

CO1. Demonstrate knowledge on mobile platforms, mobile user interface and user interface design requirements.

CO2. Design user interfaces by analyzing user requirements.

CO3. Develop mobile applications for Messaging, Location-Based Services, And Networking.

CO4. Develop mobile applications and publish in different mobile platforms.

CO-PO-PSO Mapping Table:

Course Outcome	Program Outcomes												Program Specific Outcomes

Correlation Level: 3-High; 2-Medium; 1-Low

DETAILED SYLLABUS:

Module - I: INTRODUCTION AND MOBILE USER INTERFACE DESIGN (08 periods)

Mobile web presence, Mobile applications, Marketing, App as a mobile web app; User interface design - Effective use of screen real estate, Mobile application users, Mobile information design, Mobile platforms, Tools of mobile interface design.

Android versions, Features and architecture, Required tools, Android application launching.

Module - II: ACTIVITIES, INTENTS AND ANDROID USER INTERFACE (09 periods)

Activities, Linking activities using intents, Calling Built – In Applications Using Intents, Displaying notifications, Components of a screen, Adapting to display orientation, Managing changes to screen orientation, Utilizing the action bar, Listening for UI notifications.

Module-III: ADVANCED USER INTERFACE AND DATA PERSISTENCE (10 periods)

Basic views, Picker views, List view, Image view, Menus with views, Web view, Saving and loading user preferences, Persisting data to files, Creating and using databases.

ModuleIV: MESSAGING, LOCATION-BASED SERVICES, AND NETWORKING (09 Periods)

SMS messaging, Sending e-mail, Displaying maps, Getting location data, Monitoring a location, Consuming web services using HTTP.

Module- V: ANDROID SERVICES, PUBLISHING ANDROID APPLICATIONS AND IOS (09 Periods)

Services, Communication between a service and an activity, Binding activities to services, Threading, Preparing for publishing, Deploying APK files.

iOS tools, iOS project, Debugging iOS apps, Objective-C basics, Hello world app, Building the derby app in iOS.

Total Periods: 45

Experiential Learning

1. Develop an application that uses GUI components, Font and Colours
2. Develop an application that uses Layout Managers and event listeners.
3. Write an application that draws basic graphical primitives on the screen.
4. Develop an application that makes use of databases.
5. Develop an application that makes use of Notification Manager.
6. Implement an application that uses Multi-threading.
7. Develop a native application that uses GPS location information
8. Implement an application that writes data to the SD card.
9. Implement an application that creates an alert upon receiving a message
10. Write a mobile application that makes use of RSS feed

MINI-PROJECT

11. Develop a mobile application to send an email.
12. Develop a Mobile application for simple needs

Course Correlation Mapping	3	3	3	-	-	-	2	2	-	-	2	-	3	-	3

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENTS:

Module 1:INTRODUCTION TO SOFTWARE DEVELOPMENT AND METHODOLOGY:(09 Periods)

Overview of Software development methodology and software quality model, different models of software development and their issues. Introduction to software architecture, evolution of software architecture, software components and connectors, common software architecture frameworks, Architecture business cycle – architectural patterns – reference model.

Module 2:SOFTWARE ARCHITECTURE MODELS:**(09 Periods)**

structural models, framework models, dynamic models, process models. Architectures styles: dataflow architecture, pipes and filters architecture, call-and return architecture, data-centered architecture, layered architecture, agent based architecture, Micro-services architecture, Reactive Architecture, Representational state transfer architecture etc.

Module 3:SOFTWARE ARCHITECTURE IMPLEMENTATION TECHNOLOGIES: (09 Periods)

Software Architecture Description Languages (ADLs), Struts, Hibernate, Node JS, Angular JS, J2EE – JSP, Servlets, EJBs; middleware: JDBC, JNDI, JMS, RMI and CORBA etc. Role of UML in software architecture.

Module 4:SOFTWARE ARCHITECTURE ANALYSIS AND DESIGN:**(09 Periods)**

Requirements for architecture and the life-cycle view of architecture design and analysis methods, architecture-based economic analysis: Cost Benefit Analysis Method (CBAM), Architecture Tradeoff Analysis Method (ATAM). Active Reviews for Intermediate Design (ARID), Attribute Driven Design method (ADD), architecture reuse, Domain – specific Software architecture.

Module 5:SOFTWARE ARCHITECTURE DOCUMENTATION:**(09 Periods)**

principles of sound documentation, refinement, context diagrams, variability, software interfaces. Documenting the behavior of software elements and software systems, documentation package using a seven-part template.

Total Periods: 45**EXPERIENTIAL LEARNING**

1. Prepare the complete UML diagrams required for the online student course registration system for university, and hospital management system.
2. Study report for any of the MVC based Frameworks

TEXT BOOKS

1. Bass, L., P. Clements, & R. Kazman, "Software Architecture in Practice", 2 Ed, Prentice-Hall.
2. Jim Keogh, "J2EE – Complete Reference", Tata McGraw Hill.
3. Dikel, David, D. Kane, and J. Wilson, "Software Architecture: Organizational Principles and Practices", Prentic -Hall.

COURSE CONTENT

Module 1: INTRODUCTION TO SOFTWARE ARCHITECTURE (09 Periods)

Need for Software Architecture, Objectives of Software Architecture, Types of Information Technology (IT) Architecture, Architectural Patterns and Styles, Architectural Considerations, Architecting Process for Software Applications, Level 0: High-Level Architecture, Level 1: Solution Architecture, Detailed Design.

Module 2: SOA AND MSA BASICS (09 Periods)

Evolution of SOA and MSA, Service-oriented Architecture and Microservices architecture, Drivers for SOA, Dimensions of SOA, Conceptual Model of SOA, Standards And Guidelines for SOA, Emergence of MSA, Strawman Architecture for Enterprise-wide SOA, Enterprise SOA Reference Architecture, Object-oriented Analysis and Design (OOAD) Process, Service-oriented Analysis and Design (SOAD) Process.

Module 3 SERVICE-ORIENTED ANALYSIS AND DESIGN (09 Periods)

Need for Models, Principles of Service Design, Non-functional Properties for Services, Design of Activity Services (or Business Services), Design of Data Services, Design of Client Services, Design of Business Process Services.

Module 4 MICROSERVICES ARCHITECTURE (09 Periods)

Services Model for Cloud and Mobile Solutions, API Adoption on the Rise, Challenges and Takeways from SOA Implementations, Architecture Trend – Microservices Architecture, Microservices Architecture in Action, Cloud Services and MSA, MSA for SMAC Solutions.

Module 5 MICROSERVICES WITH DOCKER (09 Periods)

Docker runtime and orchestration engine, docker images, Key use cases, architecture, Docker basic commands.

Total Periods: 45

EXPERIENTIAL LEARNING

- 1 a)** Install Dockers and Kubernetes in a machine having Ubuntu operating system.
- b)** Starting the kubernetes master and controlling kubernetes cluster manager
- 2** Invoke the hello-world Application in a Local machine Browser with its Service Endpoint
- 3** Use MySQL database and create a MySQL container with a replication controller.
- 4** Create MongoDB database and create a container service with a replication controller.

22AI101004	AUGMENTED REALITY AND VIRTUAL REALITY	3	-	-	-	3
Pre-	-					
RequisiteAnti	-					
-Requisite	-					
Co-Requisite						

COURSE DESCRIPTION: This course emphasizes on the basic concepts of augmented and Virtual reality. It also covers the Characteristics of tracking technology, Stationary tracking systems and Human Computer Interaction For Augmented Reality. By the end of this course students will acquire basic knowledge on Creating WebVR application using Unity 3D.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Analyze the augmented reality display environment, applications and tracking methods for spatial measurement and alignment of objects.
- CO2.** Analyze optical tracking and scene reconstruction algorithms for electronically perceiving imagery from camera sensors
- CO3.** Investigate interaction, authoring, navigation and collaboration methods for providing human computer interaction in augmented reality systems.
- CO4.** Demonstrate knowledge on the fundamental concepts and hardware of virtual reality medium.
- CO5.** Develop virtual reality modules using Oculus DK and Web VR API to provide simulated experience.

CO-PO-PSO Mapping Table:

Course Correlation Mapping	3	2	-	-	2	-	-	-	-	-	-	-	3	-	-	-

Correlation Levels: 3:High; 2:Medium; 1:Low

COURSECONTENT

Module1 INTRODUCTIONTOAUGMENTEDREALITY (09 Periods)

History of augmented reality, Examples, Related fields – Mixed reality, Virtual reality, Ubiquitous computing; Displays – Multimodal displays, Visual perception, Requirements and characteristics, Spatial display model, Visual displays.

Module2 COMPUTERVISIONFORAUGMENTEDREALITY (10 Periods)

Tracking – Tracking, calibration and registration, Coordinate systems, Characteristics of tracking technology, Stationary tracking systems, Mobile sensors, Optical tracking, Sensor fusion; Marker Tracking, Multiple-camera Infrared tracking, Natural feature tracking by detection, Incremental tracking, Outdoor tracking.

Module3 HUMANCOMPUTERINTERACTIONFORAUGMENTEDREALITY (09 Periods)

Interaction – Input modalities, Output modalities, Haptic interaction, Multimodal interaction; Authoring – Requirements of AR authoring, Elements of authoring, Stand-alone authoring solutions, Plug-In approaches; Navigation – Foundations of human navigation, Route visualization, View point guidance, Multiple perspectives; Collaboration – Co-located collaboration, Remote collaboration.

Module4 INTRODUCTIONTOVIRTUALREALITY (08 Periods)

Stereoscopic displays, Motion tracking hardware, Input devices, Computing platforms, Virtual reality applications, Virtual reality hardware – Oculus Rift, Crescent Bay, Samsung Gear VR, Google Cardboard; 3D graphics basics – Coordinate systems, Meshes, Polygons, Vertices, Materials, Textures, Lights, Transforms, Matrices, Cameras, Perspective, View ports and Projections, Stereoscopic Rendering; Unity 3D, Setting up the Oculus SDK, Example VR application.

Module5 GearVRANDWebVRINVIRTUALREALITY (09 Periods)

Gear VR – Gear VR user interface and Oculus Home, Oculus Mobile SDK, Developing for Gear VR using Unity 3D, Deploying applications for Gear VR; WebVR – WebVR API, Creating WebVR application, Tools and techniques for creating WebVR.

Total Periods: 45

EXPERIENTIALLEARNING

1. Develop a scene in Unity that includes a cube, plane and sphere. Create a new material and texture separately for three Game objects. Change the colour, material and texture of each Game object separately in the scene.

Write a C# program in visual studio to change the colour and material/texture of the game objects dynamically on button click.

2. Create a virtual environment for any use case. The application must include at least 4 scenes which can be changed dynamically, a good UI, animation and interaction with Game objects. (e.g VR application to visit a zoo)
3. Create an immersive environment (living room/ battlefield/ tennis court) with only static game objects. 3D game objects can be created using Blender or use available 3D models.

(It's an indicative one. The Course Instructor may change the activities and the same shall be reflected in Course Handout)

22AI101018	3D MODELLING AND ANIMATION	3	-	-	-	3
Pre-	-					
RequisiteAnti	-					
-RequisiteCo-	-					
Requisite						

COURSE DESCRIPTION: This course emphasizes on the basic concepts of 3D Geometric System. It also covers the different 3D Modeling Techniques to design curve based images. In this course they will learn animation principles to design character based system. By the end of this course students will acquire basic knowledge to implement Modeling and Animation techniques for Model based Applications.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

CO1. Demonstrate the Knowledge on Basic Building Blocks of 3D Geometric System.

CO2. Apply Mesh Operations to model different Polygons.

CO3. Design different types of curve models by applying Sweeping Techniques.

CO4. Apply rendering and Illumination techniques to animate character based image

Correlation Levels:

3:High;

2:Medium;

1:Low

COURSE CONTENT

Module1 INTRODUCTION

(08 Periods)

Basic Building Blocks: Coordinates, Measurements, and Dimensions, Cartesian Coordinate System, Polar Coordinate System, Points, Lines, and Polygons, Transformations, Euclidean and Projective Geometry.

Module2 MODELING CATEGORIES AND APPROACHES

(08 Periods)

Primitives, Polygonal Modeling, Polygonal Mesh Operations, Box Modeling, Part Modeling, Deformation Operations, External and Internal Navigation.

Module3 CURVE-BASED AND OTHER MODELING TECHNIQUES (09 Periods)

Curved Lines, Open and Closed Curves, Simple and Non simple Curves, Upward and Downward Curves, Interpolating versus Approximating Curves, Splines, Polynomials, Bezier Curves, B-Splines, NURBS (Non uniform Rational B-Splines), Sweeping Techniques, Organic versus Hard Surface Modeling.

Module4 ANIMATION (10 Periods)

Early Innovations in Animation, Understanding Motion and Basic Physics: Time, Motion, and Speed, Translational Motion, Circular Motion. **Animation Types:** Hand-Drawn Animation, Stop-Motion Animation, Key Frame Animation, Camera Animation, Effects Animation, Principles of Animation

Module5 CHARACTER: DESIGN, RIGGING, & ANIMATION (10 Periods)

Rigging, & Animation, Elements of Character Design and Posing, Character: Design, Rigging, & Animation, Lighting: Optical Properties of Lights, Material Classification Based on Light Interaction, Additive Model and Digital Lighting, Types of CG Illumination, Digital Rendering, Steps in Rendering, Elements of Composition

Total Periods: 45

EXPERIENTIAL LEARNING

1. Design the following simple animations using transformations
 - i. Circle moving from left to right and vice-versa
 - ii. Man object moving
 - iii. Wind mill rotation
 - iv. Man walking
 - v. Simple animation of football goal
2. Create a Bouncing Ball using Key frame animation and Path animation.

(It's an indicative one. The Course Instructor may change the activities and the same shall be reflected in Course Handout)

PROGRAM ELECTIVE

Course Code	Course Title	L	T	P	S	C
22CS101005	DISTRIBUTED SYSTEMS	3	-	-	-	3

Pre-Requisite - Operating system

Anti-Requisite -

Co-Requisite -

COURSE DESCRIPTION: This course focuses on the fundamental principles and models underlying all aspects of distributed computing. It includes topics that covers the principles underlying the theory, algorithms, and systems aspects of distributed computing.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1** Identify the design issues; select appropriate system and mode of execution to address challenges in creating distributed systems.
- CO2.** Utilize the concept of causality between events for designing and analyzing distributed systems.
- CO3.** Record the global state of a distributed system for analyzing, testing, or verifying properties associated with distributed executions.
- CO4.** Implement various approaches for solving distributed mutual exclusion problem and compare their feature and performance.
- CO5.** Study several distributed dead lock detection techniques based on various strategies and solve dead lock problem

CO-PO-PSO Mapping Table:

Course Outcomes	Program Outcomes												Program Specific Outcomes

Course Correlation Mapping	3	3	3	-	-	-	2	2	-	-	2	-	3	-	3	-

Correlation Levels: 3:High; 2:Medium;1:Low

Module1 – Introduction

(09 Periods)

Relation to parallel multiprocessor/multicomputer systems - Message-passing systems versus shared memory systems - Synchronous versus asynchronous executions - Design issues and challenges - A model of distributed executions - Models of communication networks - Past and future trends of an event - Models of process communications

Module2-Logical time**(09 Periods)**

A framework for a system of logical clocks- Scalar time - Vector time -Efficient implementations of vector clocks - Jard-Jourdan's adaptive technique - Matrix time - Virtualtime- Physical clock synchronization: NTP

Module3-Global state and snapshot recording algorithms**(09 Periods)**

Global state and snapshot recording algorithms-Snapshot algorithms for FIFO channels-Variations of the Chandy-Lamport algorithm-Snapshot algorithms for non-FIFO channels -Snapshot sinacausal delivery system-Monitoring global state

Module4-Distributed mutualex clusion algorithms**(09 Periods)**

Lamport's algorithm-Ricart-Agrawala algorithm-Singhal's dynamicin formation-structure algorithm-LodhaandKshemkalyani'sfairmutual exclusion algorithm-Quorum-based mutual exclusion algorithms - Maekawa's algorithm - Agarwal-El Abbadi quorum-based algorithm - Token-based algorithms - Suzuki-Kasami's broadcast algorithm-Raymond's tree-based algorithm.

Module5-Deadlock detectionin distributed systems**(09 Periods)**

System model - Models of deadlocks - Knapp's classification of distributed deadlock detection algorithms - Mitchell and Merritt's algorithm for the single resource model - Chandy-Misra-Haas algorithm for the AND model - Chandy-Misra-Haas algorithm for the OR model-Distributed shared memory-Abstraction and advantages-Memory consistency models.

Total Periods:45**EXPERIENTIAL LEARNING**

1. Implement concurrentechoclient-server application
2. Implement concurrent day-timeclient-server application.
3. Create CORBA based server-client application.
4. Implementing Publish/Subscribe Paradig musing Web Services,ESBandJMS.
5. Test open source ESB using web service.

PROGRAM ELECTIVE

Course Code	Course Title	L	T	P	S	C
22CB101001	CYBER SECURITY ESSENTIALS	3	-	-	-	3
Pre-Requisite	-					
Anti-Requisite	Computer Networks					
Co-Requisite	-					

COURSE DESCRIPTION: This course provides a detailed discussion on Cyber Security Fundamentals, Cyber Security Fundamentals, Attacker techniques and motivations, Fraud techniques, Threat infrastructure, Exploitation, Malicious code, Defense and analysis techniques, Intrusion detection techniques

COURSE OBJECTIVES:

- To impart knowledge on network security concepts, attacker techniques, Exploitation, defense and analysis techniques
- To develop skills on attacker techniques and malicious code to application against cyber threats
- To inculcate attitude among students to solve societal problems using cyber security concepts to defend the attacks in system.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Understanding the fundamental concepts of cyber security concepts
- CO2.** Identify the pattern of launching attacker and fraud techniques to reduce risk and impact of cyber-attacks.
- CO3.** Identify the vulnerabilities using the SQL injection and web exploitation techniques in a system for securing data.
- CO4.** Apply code obfuscation techniques to prevent any unauthorized party from accessing logic of an application
- CO5.** Apply honey pots and malicious code-naming techniques to defend against attacks in memory.

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT:

Module 1: CYBER SECURITY FUNDAMENTALS

(10 Periods)

Network Security Concepts: Information assurance fundamentals, Basic cryptography, Symmetric encryption, Public key encryption, The Domain Name System(DNS), Firewalls, Virtualization, Radio-Frequency Identification.

Module 2: ATTACER TECHNIQUES

(09 Periods)

Attacker techniques and motivations: Anti forensics, proxy usage, Tunneling techniques: HTTP, DNS, ICMP, Intermediaries, Steganography and other concepts, Detection and prevention.

Fraud techniques: Phishing, smishing, vishing and mobile malicious code, rogue antivirus, click fraud.

Threat infrastructure: Botnets, Fast Flux, Advanced Fast Flux.

Module 3: EXPLOITATION

(09 Periods)

Shellcode, Integer overflow vulnerabilities, Stack based buffer overflows, Format string vulnerabilities, SQL injection, Malicious PDF files, Race conditions, Web exploit tools, DoS conditions, Brute force and dictionary attacks.

Module 4: MALICIOUS CODE

(10 Periods)

Worms, viruses, Evading detection and elevating privileges: obfuscation, Virtual Machine obfuscation Persistent software techniques,Token kidnapping, Virtual machine Detection, Rootkits, Spyware, Attacks against privileged user accounts and escalation of privileges, Stealing information and Exploitation.

Module 5: DEFENSE AND ANALYSIS TECHNIQUES

(07 Periods)

Importance of memory forensics, Capabilities of memory forensics, Memory analysis frameworks, Dumping physical memory, Installing and using volatility, Finding hidden processes, Volatility analyst pack.

Honeypots, Malicious code naming, Automated malicious code analysis systems, Intrusion detection techniques.

Total Periods: 45

EXPERIENTIAL LEARNING:

Network Security Basics:

Configuring firewalls: Set up and configure firewall rules to control incoming and outgoing network traffic.

Intrusion detection/prevention systems (IDS/IPS): Deploy and manage IDS/IPS solutions to detect and mitigate network threats.

Virtual private networks (VPNs): Configure VPN connections to secure remote access and data transmission over public networks.

Operating System Security:

Hardening operating systems: Implement security best practices and configurations to strengthen the security posture of operating systems.

Patch management: Develop and execute patch management strategies to keep systems up to date with security patches and updates.

User access controls: Configure user permissions, access levels, and authentication mechanisms to prevent unauthorized access.

Correlation Levels:

3: High;

2: Medium;

1: Low

COURSE CONTENT

Module 1: INTRODUCTION

(09 Periods)

Computer security concepts, Security attacks, Security services, Security mechanisms, Model for network security, Symmetric cipher model, Substitution techniques - Monoalphabetic ciphers and Polyalphabetic ciphers.

Module 2: SYMMETRIC CIPHERS

(07 Periods)

Stream ciphers and block ciphers, Data Encryption Standard (DES), Advanced Encryption Standard (AES) - Structure, Transformation Functions; Block Cipher Operation - Multiple encryption and triple DES, Cipher block chaining mode, Cipher feedback mode, Output feedback mode, Counter mode.

Module 3: PUBLIC KEY CRYPTOGRAPHY AND CRYPTOGRAPHIC DATA INTEGRITY ALGORITHMS

(09 Periods)

Public Key Cryptography: RSA, Diffie-Hellman key exchange, Elgamal cryptographic system.

Cryptographic Data Integrity Algorithms: Hash Functions - Simple hash functions, Secure Hash Algorithm SHA-512; Message Authentication Codes - Requirements, Functions, Security of MACs, HMAC; Digital signatures - Schnorr Digital signature scheme;

Module 4: MUTUAL TRUST

(10 Periods)

Key Management and Distribution: Symmetric key distribution using symmetric and asymmetric encryption, Distribution of public keys, X.509 certificates, Public key infrastructure.

User Authentication: Remote user authentication principles, Kerberos, Personal identity verification.

Module 5: NETWORK AND INTERNET SECURITY

(10 Periods)

Transport Level Security: Web security considerations, Transport layer security, HTTPS.

Electronic Mail Security: S/MIME, Pretty Good Privacy, DNSSEC.

IP Security: Overview, Policy, Encapsulating security payload.

Total Periods: 45

EXPERIENTIAL LEARNING

1. Construct a Caesar cipher and convert the word "the Network security" into Cipher text with $k=3$.
2. Generate the Cipher text for the message "BALLOON" using play fair Cipher.
3. Generate the cipher text for the message "me" and also regenerate the message from the cipher text using hill cipher and with the key

$$\begin{pmatrix} 9 & 4 \\ 5 & 7 \end{pmatrix}$$

4. Construct a cipher for the word "the Network security" using rail fence of Depth = 2.
5. Perform the Simple DES on the following data and calculate the cipher text for the plain text "10100101" and the key is "0010010111"

P10:	3	5	2	7	4	10	1	9	8	6
P8:	6	3	7	4	8	5	10	9		
E/P:	4	1	2	3	2	3	4	1		
S0		0	1	2	3					
	0	1	0	3	2					
	1	3	2	1	0					
	2	0	2	1	3					
	3	3	1	3	2					
S1		0	1	2	3					
	0	0	1	2	3					
	1	2	0	1	3					
	2	3	0	1	0					
	3	2	1	0	3					
P4:	2	4	3	1						
IP:	2	6	3	1	4	8	5	7		
IP ⁻¹ :	4	1	3	5	7	2	8	6		

6. Using Fermat's theorem, find $4^{225} \bmod 13$.
7. Consider a one-way authentication technique based on asymmetric encryption:
 - A → B: ID_A
 - B → A: R₁
 - A → B: E(PR_A, R₁)
 - a. Explain the protocol.
 - b. What type of attack is this protocol susceptible to?
8. Consider a one-way authentication technique based on asymmetric encryption:
 - A → B: ID_A || E(PU_B, R_A)
 - B → A: R_A
 - a. Explain the protocol.
 - b. What type of attack is this protocol susceptible to?
9. Investigate the network access control scheme used at your College. Draw a diagram and describe the principal components.

- 10 List some commonly used cloud-based data services. Explore and compare these services based on their use of encryption, flexibility, efficiency, speed, and ease of use. Study security breaches on these services in recent past. What changes were made by the services after these attacks?

PROGRAM ELECTIVE

Course Code	Course Title	L	T	P	S	C
22CS101006	HIGH PERFORMANCE COMPUTING	3	-	-	-	3

Pre-Requisite -

Anti-Requisite -

Co-Requisite -

COURSE DESCRIPTION: Heterogeneous Parallel Computing, Architecture of Modern CPU; Data Parallelism, CUDA Program Structure; Device Global Memory and Data Transfer; Thread Scheduling and Latency Tolerance, Querying Device Properties; Computational Thinking, Basic OpenACC Programs, Future Directions of OpenACC.

COURSE OUTCOMES: *After successful completion of this course, the students will be able to:*

- CO1.** Explore parallel programming models to understand behavior of algorithms and application on parallel systems.
- CO2.** Analyze the functionality of GPU architecture using parallel computing platform CUDA.
- CO3.** Design CUDA kernel functions to launch data parallel execution on multiple GPU's processor cores.
- CO4.** Explore the concepts of CUDA thread organization and scheduling for data access in heterogeneous systems.
- CO5.** Apply strategies of CUDA memories to boost the execution efficiency of kernel functions on parallel computers.
- CO6.** Identify OpenCL API and OpenACC directives to accelerate the applications on high performance architectures.

CO-PO-PSO Mapping Table:

Course Correlation Mapping	3	3	2	2	2	-	-	-	-	-	-	-	3	-	-	-
Correlation Level: 3-High; 2-Medium; 1-Low																

COURSE CONTENT :

Module 1: PARALLEL COMPUTING

(08 Periods)

Heterogeneous Parallel Computing, Architecture of Modern CPU, Why more parallelism, Speeding up real applications, Parallel programming languages and models.

Module 2: GPU COMPUTING

(10 Periods)

Evolution of Graphics Pipelines, GPGPU: An intermediate Step, GPU Computing.

Introduction to Data Parallelism and CUDA C: Data Parallelism, CUDA Program Structure, A Vector Addition Kernel, Device Global Memory and Data Transfer, Kernel Functions and Threading.

Module 3: DATA-PARALLEL EXECUTION MODEL

(10 Periods)

CUDA Thread Organization, Mapping Threads to Multidimensional Data, Matrix-Matrix Multiplication-A More Complex Kernel, Synchronization and Transparent Scalability, Assigning Resources to Blocks, Querying Device Properties, Thread Scheduling and Latency Tolerance.

Module 4: CUDA MEMORIES AND PARALLEL PROGRAMMING

(08 Periods)

Importance of Memory Access Efficiency, CUDA Device Memory Types, A Strategy for Reducing Global Memory Traffic, A Tiled Matrix_Matrix Multiplication Kernel, Memory as a Limiting Factor to Parallelism.

Parallel Programming: Goals of Parallel Computing, Problem Decomposition, Algorithm Selection, Computational Thinking.

Module 5: AN INTRODUCTION TO OPENCL & PARALLEL PROGRAMMING WITH OPENACC

(09 Periods)

Data Parallelism Model, Device Architecture, Kernel Functions, Device Management and Kernel Launch, Electrostatic Potential Map in OpenCL.

OpenACC: OpenACC Versus CUDA C, Execution Model, Memory Model, Basic OpenACC Programs, Future Directions of OpenACC.

Total Periods: 45

EXPERIENTIAL LEARNING

1. Analyse and implementation a parallel code for below programs using OpenMP considering Synchronization requirements.
(Demonstrate the use of different Clauses and Constructs wherever applicable)
 - a, Fibonacci computation
 - b, Producer Consumer Problem
2. To analyse the Linux based Computer Systems using Following Commands:;
 - a. top
 - b. ps
 - c. Kill
 - d. cat/ proc/cpuninfoe.vmstat
3. Write a parallel program to calculate the value of PI/Area of circle using OpenMP Library

TEXT BOOK:

1. David B. Kirk, Wen-mei W. Hwu, *Programming Massively Parallel Processors: A Hands-on Approach*, Elsevier Science, 2nd Edition, 2013.

REFERENCE BOOKS:

PROGRAM CORE

Course Code	Course Title	L	T	P	S	C
22DS102002	BIG DATA TECHNOLOGIES	3	-	2	-	4
Pre-Requisite	Database Management Systems					
Anti-Requisite	Data Warehousing and Data Mining.					
Co-Requisite	-					

COURSE DESCRIPTION: This course provides a detailed discussion and hands-on experience on Hadoop Basics, Hadoop Distributed File system, MapReduce, Hive, Pig and HBase, Zookeeper, Sqoop and Big data Case Studies.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Demonstrate knowledge on Big Data characteristics, storage, processing, querying and reporting
- CO2.** Analyze large dataset issues and solve using data analytic techniques.
- CO3.** Design and Develop classification and clustering models for dataset analysis.
- CO4.** Solve large data analysis problems using Big data techniques.
- CO5.** Apply Big Data Tools: Sqoop, HBase, Hive, Pig, MapReduce and Zookeeper for large
- CO6.** Work independently and in teams to solve Big Data problems with effective communications.

CO-PO-PSO Mapping Table:

Correlation Levels:

3: High

2: Medium

1: Low

COURSE CONTENT:

Module 1 - INTRODUCTION TO BIG DATA AND HADOOP

(09 periods)

Introduction to Big Data: Evolution and Definition of Big Data, Structure of Big Data, Characteristics, Advantages, Applications and Tools.

Hadoop: Data storage and analysis, Comparison with other systems, History of Hadoop, Apache Hadoop and the Hadoop Ecosystem, Hadoop Releases.

Module 2 – HADOOP DISTRIBUTED FILE SYSTEM AND HADOOP I/O

(09 periods)

Hadoop Distributed File system: HDFS concepts, Command-Line Interface, Hadoop file systems, Java Interface, Data Flow, Hadoop Archives.

Hadoop I/O: Data Integrity, Compression, Serialization, File-Based Data Structures.

Module 3 – MAPREDUCE, TYPES & FORMATS AND FEATURES (09 periods)

MapReduce: Analyzing the data with Hadoop, Scaling Out, Hadoop Streaming, Hadoop Pipes.

Types and Formats: MapReduce Types, Input Formats, Output Formats.

Features: Counters, Sorting, Joins, Side Data Distribution and MapReduce Library Classes.

Module 4– HIVE, PIG AND HBASE (09 periods)

Hive: Comparison with Traditional Databases, HiveQL, Tables, Querying Data, and User-Defined Functions.

Pig: Comparison with Databases, Pig Latin, User-Defined Functions, Data Processing Operators.

HBase: Basics, Concepts, Clients, HBase vs. RDBMS, Praxis.

Module 5– ZOOKEEPER, SQOOP AND CASE STUDIES (09 periods)

Zookeeper: Zookeeper Service, Building applications with Zookeeper, Zookeeper in production.

Sqoop: Database Imports, working with Imported Data, Importing Large Objects, Performing an Export.

Case Studies: WhatsApp, Facebook and Twitter.

Total periods: 45

EXPERIENTIAL LEARNING:

1. Practice on Hadoop:
 - i. Hadoop installation and Cluster Configuration.
 - ii. Create Name node, Secondary Name node in Safe mode.
 - iii. Create Hadoop File system Shell and Read and write Data.
2. Practice on MapReduce:
 - i. Create file to count the number of words and display the same.
 - ii. Create zip file of weather report and fetch the max temperature value from the report
3. Install and Run Hive and Hbase, then use Hive to create, alter, and drop databases, tables, and perform views, functions, indexes and Joins.
4. Perform Data Processing Operators using Pig.
5. Import and Export data from RDBMS database using Sqoop tool.
6. Perform data storage and management using Zookeeper tool.
7. Install Spark and Pyspark in Windows and Ubuntu.
8. Practice on Spark
 - i) Spark Transformations i.e. map(), filter(), flatmap(), groupBy(), groupByKey(), sample(), union (), join(), distinct(), keyBy(), partitionBy and zip().
 - ii) Spark Actions i.e. getNumPartitions(), collect(), reduce(), aggregate (), max(), sum(), mean(), stdev(), countByKey().
9. Write a Scala program for Linear Search, Binary Search, Bubble Sort, Quick Sort, and Stack operations.
10. Practice on PySpark
 - i) Actions and Transformation commands.
 - ii) Program for implementation of bubble sort and Selection Sort
 - iii) Program for implementation of stack and Queue
11. Case study 1: Insurance Domain
 - i) Perform Hive operations on Insurance Dataset
 - ii) Perform Pig Data Processing Operators on Insurance Dataset
12. Case study 2: Healthcare Domain
 - i) Perform Hive operations on Insurance Dataset
 - ii) Perform Pig Data Processing Operators on Insurance Dataset

RESOURCES

TEXT BOOKS:

PROGRAM ELECTIVE

Course Code	Course Title	L	T	P	S	C
22DS102003	DATA VISUALIZATION	3	-	2	-	4
Pre-Requisite	Python Programming					
Anti-Requisite	-					
Co-Requisite	-					

Course Description: This course provides a detailed discussion on Data Visualization elements, tools, visualization of maps, Dashboard design using Power BI and Tableau.

Course Outcomes: After successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on Data Visualization concepts.

CO2. Apply data visualization tools to perform ETL process and create charts.

CO3. Develop customized Map visualizations

CO4. Demonstrate skills in developing Dashboards as per business requirements.

CO5. Perform Data Analysis using Power BI.

CO-PO-PSO Mapping Table:

Course Outcomes	Program Outcomes												Program Specific Outcomes			
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3	PSO4

Correlation Levels: 3:High 2:Medium 1:Low

COURSE CONTENT:

Module 1: INTRODUCTION

(09 periods)

Definition of Data Visualization, The data visualization process, Data visualization importance in reports and statements; Data types, relationships, and visualization formats, Basic principles for data visualization, Layout and design: communicative elements, Prioritize patterns in visualizations: Gestalt, Storytelling for social and market communication, Trends in market research and data visualization dashboards

Module 2: DATA VISUALIZATION TOOLS

(09 periods)

Data Visualization and Benefits Data Visualization Tools, Data Visualization Tools- Google Data Studio, Tableau, Qlikview, Power BI; Features, Data Access from Data Sources, Data transformation-Extraction, Transformation and Load (ETL), Messy data, Data formats and schemas, Data blending or fusion, Methods for data cleansing, Data profiling, Open source data-cleansing tools; Bar Chart, Pie Chart, Data Tables, Scatter Chart, Time Series Chart, Scorecards, Bullet Charts, and Area Chart.

Module 3: MAPS**(09 periods)**

Heat Map-Introduction, Uses of Heat map, Procedure to Create Heat Map in Tableau; Geo Map-Introduction -Need of map visualization, Uses of Geo map, Types of maps, Procedure to create Geo map / Symbol map in Tableau; Symbol Map- Introduction, Procedure to create Symbol Map; Filled Map; Editing Location in Map- Add more fields to view, Edit locations in the Special Values menu, Edit ambiguous locations, Edit unknown locations.

Module 4: DASH BOARDS**(09 periods)**

Introduction- Definition, Key Metrics for Dashboard, Benefits of Dashboard, Types of Dashboard, Customized Dashboard; Creating a Dashboard- Creating a Dashboard using Google Data Studio, Creating a dashboard in Tableau; Formatting a Dashboard- Dashboard Size, Steps to set overall dashboard size, Group items using layout containers, Tile or float dashboard items; Actions In Dashboard- Highlight Action, Dashboard Filters, URL Action; Sharing Reports- Share with specific users and groups, Sharing the link of report, Embedding report, Download the report

Module 5: POWER BI**(09 periods)**

Understanding Power BI, Key Features of Power BI, Advanced features of Power BI, Variants of Power BI, Data sources and modeling, Data transformation and relationships, chart types for visualization, format options of charts, Data Analysis Expressions functions include aggregate, counting, logical and date functions for creating calculated columns and measures.

Total Periods: 45**EXPERIENTIAL LEARNING:****List of Exercises:**

1. Connect data sources to Tableau.
 - i). Text files, Excel files, Access Databases, SQL Server
 - ii). Dimensions and measures of data, Perform changing data types, Apply filters, Merge multiple data sources.
2. Create Univariate charts
 - i) Create Tables
 - ii) Create common visualizations (bar charts, line charts etc.) and sort the graphs
 - iii) Show aggregate measures and top 10 items
3. Create Maps and Perform customization of maps
4. Calculate user-defined fields using functions
5. Assemble a dashboard layout and apply filters.
6. Perform interactions with text, visual tooltips and actions.
7. Drill down between dash boards.
8. Perform advanced visualization using Tableau.
9. Create a data story in Tableau.
10. Create a graph for telecom billing data:
 - i). Bar chart for customer segment vs average bill
 - ii). Sort them based on average current charges
 - iii). Create a set based on last five groups
 - iv). What is the count of accounts and average bill for the subset.
11. Design a dashboard to show units in stock by product and a total sale by year.
(*Demonstration on List of Power BI chart types for visualization*).
12. Design a dashboard to check the total amount of sales made in each month and find out which month had the highest and lowest sales. Use a simple clustered column chart. Drag the date column on the axis and the sales on to the values then change the color of the bars by going to the format option and selecting data colors.
(*Demonstration on format options of charts*).

COURSE CONTENT:

Module 1: INTRODUCTION TO DATA ENGINEERING (09 Periods)

Introduction to Data Engineering: Introduction –The rise of Big Data as corporate asset–Challenge of ever growing dataset–Big data Enablers-benefits of cloud in building big data analytics.

Data Management Architectures: Introduction - Evolution- Data Warehouses and Datamarts- Datalakes and lake house Architecture-S3 bucket.

Data Engineer's Tool Kit: AWS Technical Requirements-Services for Ingesting Data-Services for Transforming Data-Services for orchestration of Big data Pipelines-Services for Consuming Data-Lambda Function

Data Security: Introduction- AWS Glue/Lake formation data catalog-Services for Data Encryption and Security Monitoring-Services for Managing Identity and Permissions-Configuring lake formation permissions.

Module 2: ARCHITECTING AND IMPLEMENTING DATA LAKES AND LAKE HOUSES-I (09 Periods)

Architecting Data Engineering Pipeline: Introduction – Approaching the data pipeline architecture-Identifying data consumers and understanding their requirements-Identifying Data Sources and Ingesting data-Identifying Data Transformations and Optimizations – Loading data into Datamarts-Architecting a sample pipeline.

Ingesting Batch and Streaming Data: Introduction-Understanding Data Sources-Ingesting Data from Relational Database-Ingesting Streaming data- Ingesting data with AWS DMS.

Transforming Data for optimize for Analytics: Transformations-Types of Data Transformation Tools-Data Preparation Transformations-Business Use case transformation-Working with Change Data Capture(CDC) data-Joining Datasets with AWS Glue Studio.

Module 3: ARCHITECTING AND IMPLEMENTING DATA LAKES AND LAKE HOUSES-II (11 Periods)

Identifying and Enabling Data Consumers: Understanding the impact of data democratization-Meeting the needs of business users with Data Visualization- Meeting the needs of Data Analysts with Structured Reporting-Meeting with needs of Data Scientists and Machine Learning Models- Creating Data Transformations with AWS Glue dataBrew.

Loading data into a Data Mart: Introduction-Extending Analytics with Data warehouses /Data marts-Anti Patterns for a Data Warehouse-Redshift architecture review and storage deep drive-designing a high performance data warehouse-Moving Data between a data Lake and Redshift-Loading data into an Amazon Redshift Cluster and running queries.

Orchestrating the Data Pipeline:Introduction- Understanding the core concepts for pipeline orchestration- Examining the Options for Orchestration Pipelines in AWS-Orchestrating a data pipeline with Step Function.

Module 4: QUERIES AND DATA VISUALIZATION (08 Periods)

Ad-hoc queries with Amazon Athena: Introduction –Amazon Athena-in-place SQL Analytics for the data lake- Tips and Tricks to Optimize Amazon Athena Queries-Federating the queries of external data sources with Amazon Athena Query Federation- Managing Governance and costs with Amazon Athena Workgroups-Creating Athena Workgroups and Athena Settings-Switching workgroups and Running Queries.

Visualizing Data with Amazon QuickSight: Introduction-Representing Data Visually for maximum impact-Understanding Amazon QuickSight's core concepts- Ingesting and Preparing Data from variety of Sources-Creating and Sharing Visuals with QuickSight Analyses and dashboards-QuickSight's advanced features: ML insights and embedded dashboards-Creating a Quicksight Visualization.

Module 5: AI AND ML IN DATA ENGINEERING (08 Periods)

Enabling Artificial Intelligence and Machine Learning: Understanding the value of AI and ML for Organizations-Exploring AWS Services for ML- Exploring AWS Services for AI-Reviewing Reviews with Amazon Comprehend- Looking the Data Analytics in Big Picture-Examining examples of real-world data pipelines-Emerging Trends.

Total Periods: 45

EXPERIENTIAL LEARNING:

LIST OF EXPERIMENTS: (Minimum 10 experiments shall be conducted)

1.
 - a. Create a static website using AWS S3 Bucket
 - b. Implement the following AWS CLI Commands for creation and manipulation of S3 buckets
i.mb ii.ls iii.mv iv.mv v.presign vi.rb vii.rm viii.sync xi.website
2. Implement the following task related to AWS lambda function
 - i. Create serverless web application using AWS lambda
 - ii.Create a cronjob on AWS lambda to schedule the tasks at specific time'
 - iii.Publish Amazon CloudWatch metrics to a CSV file using AWS Lambda
 - iv.Create a Lambda function to process files in the S3 bucket that contain new Slack messages
3. Create ,manage and secure data lakes using AWS lake formation
4. Create a data pipeline using console templates and perform activites like viewing,editing,cloning,tagging,deactivating and deleting the pipeline
5. Perform streaming data Ingestion with AWS Kinesis
6. Build a Spark Pipeline to analyze streaming data using AWS Glue and S3
7. Create Glue DataBrew Job for cleaning and normalizing the dataset
8. Create a sample database on Amazon Redshift Cluster and perform complex queries on existing data
9. Build a serverless Workflow with AWS Step Functions.
10. Create Athena Workgroups and query S3 with SQL using AWS Athena
11. Create a dynamic dashboard using AWS Quicksight for data visualization
12. Perform sentimental analysis on any data set using Amazon Comprehend

COURSE DESCRIPTION: This course provides a detailed discussion on Fundamental Cloud Computing and Virtualization, Understanding Cloud Models and Architectures, Understanding Cloud Services, Applications and Capacity Planning, Exploring Platform as a Service (PaaS) and Exploring Infrastructure as a Service (IaaS).

COURSE OUTCOMES: After successful completion of the course, students will be able to:

CO1. Demonstrate knowledge on basic concepts and terminologies of Cloud Computing and Virtualization.

CO2. Demonstrate knowledge on Cloud deployment models, Service models and Architectures.

CO3. Analyze Cloud services, Applications and Capacity Planning.

CO4. Use different PaaS application frameworks to construct Cloud applications.

CO5. Develop web applications through Google, Microsoft and Amazon web services as per societal needs.

CO6. Work independently or in teams to construct Cloud applications and present with effective communication.

COURSE CONTENT:

Module-1: FUNDAMENTAL CLOUD COMPUTING AND VIRTUALIZATION (10 periods)

Cloud Computing: Origin and influences, Basic concepts and terminology, Goals and benefits, Risks and challenges, Roles and boundaries and Cloud characteristics.

Introduction to Virtualization: Characteristics, Taxonomy of virtualization technologies, Pros

and cons of virtualization, Virtualization Technologies: Xen, VMware and Hyper-V.

Module-2: UNDERSTANDING CLOUD MODELS AND ARCHITECTURES (08 periods)

Cloud Models: NIST model, Cloud Cube model, Deployment models: Public, Private, Hybrid and Community; Service models: IaaS, PaaS and SaaS.

Understanding Cloud Architecture: Exploring the Cloud Computing Stack: Composability, Infrastructure, Platforms, Virtual Appliances, Communication Protocols, Applications; Connecting to the Cloud: The Jolicloud Netbook OS and Chromium OS - The Browser as an Operating System.

Module-3: UNDERSTANDING CLOUD SERVICES, APPLICATIONS AND CAPACITY PLANNING (09 periods)

Understanding Cloud Services and Applications Infrastructure as a Service (IaaS): IaaS workloads, Pods, aggregation, and silos; Platform as a Service (PaaS), Software as a Service (SaaS): SaaS characteristics, Open SaaS and SOA, Salesforce.com and CRM SaaS; Identity as a Service (IDaaS): Identity, Networked identity service classes, Identity system codes of conduct, IDaaS interoperability; Compliance as a Service (CaaS).

Capacity Planning: Defining Baseline and Metrics: Baseline measurements, System metrics, Load Testing, Resource ceilings, Server and instance types; Network Capacity and Scaling.

Module-4: EXPLORING PLATFORM AS A SERVICE (PaaS) (10 periods)

PaaS Application Frameworks: Drupal, Eccentex AppBase 3.0, LongJump, Squarespace, WaveMaker and Wolf Frameworks.

Exploring Platform as a Service using Google Web Services: Surveying the Google Application Portfolio, Google Toolkit and Working with the Google App Engine.

Exploring Platform as a Service using Microsoft Cloud Services: Exploring Microsoft Cloud Services, Defining the Windows Azure Platform, Windows Live: Windows Live Essentials, Windows Live Home and Windows Live for Mobile.

Module-5: EXPLORING INFRASTRUCTURE AS A SERVICE (IaaS) (08 periods)

Understanding Amazon Web Services, Amazon Web Service Components and Services, Working with the Elastic Compute Cloud (EC2): Amazon Machine Images, Pricing models, System images and software, Creating an account and instance on EC2; Working with Amazon Storage Systems: Amazon Simple Storage System (S3), Amazon Elastic Block Store (EBS) and CloudFront; Understanding Amazon Database Services: Amazon SimpleDB, Amazon Relational Database Service (RDS) and Choosing a database for AWS.

Total Periods: 45

EXPERIENTIAL LEARNING

LIST OF EXERCISES:

1. Create a Virtual Machine on Virtual Box with Ubuntu 14LTs files, 2GB RAM and 200GB Hard Disk configuration through Infrastructure as a Service (IaaS).
2. Create a Virtual Machine on Virtual PC with Windows, 2GB RAM and 200GB Hard Disk configuration through Infrastructure as a Service (IaaS).
3. Create Virtual Private Cloud (VPC) with subnets, route table and Internet gateway using AWS Management Console.

4. Create a virtual machine instance with 2GB RAM and 200 GB hard disk configuration on Amazon Web Services (AWS) cloud through Elastic Compute Cloud (EC2) service and develop a home web page for online bookstore information.
5. Develop a catalogue web page for online bookstore and create a Simple Storage Service (S3) bucket on Amazon Web Services (AWS) cloud and upload catalogue web page into S3 bucket.
6. Compute the following tasks through AWS Lambda function in an event-driven environment using Qwiklabs Cloud:
 - i. Create an AWS Lambda function
 - ii. Configure an Amazon S3 bucket as a Lambda Event Source
 - iii. Trigger a Lambda function by uploading an object to Amazon S3
 - iv. Monitor AWS Lambda S3 functions through Amazon CloudWatch Log.
7. Compute the following tasks through Amazon DynamoDB using Qwiklabs Cloud:
 - i. Create an Amazon DynamoDB table
 - ii. Enter data into an Amazon DynamoDB table
 - iii. Query an Amazon DynamoDB table
 - iv. Delete an Amazon DynamoDB table.
8. (a) Perform the following operations through Google Cloud Pub/Sub using Qwiklabs Cloud:
 - i. Setup a topic to hold data
 - ii. Subscribe to a topic to access the data
 - iii. Publish and then consume messages with a pull subscriber.
 (b) Create an Google Assistant environment through Actions and Dialogflow for building an Assistant application that generates quotes when prompted by a user using Qwiklabs Cloud.
9. (a) Implement a Python Program using Watson studio in IBM Cloud Environment
 (b) Deploy and Run any application in IBM CloudEnvironment
 (c) Develop a chat bot using Watson Assistant in IBM CloudEnvironment.
10. (a) Create two data centers in different regions with 10-20 physical host, 6-10 userbases, 100-250 executable instructions length per request using Cloud Analyst simulation tool.
 (b) Evaluate and generate reports for 10(a) with different Service Broker and Load Balancing Policies. Sketch out the comparison report on different policies.
11. Create an instance for connecting, monitoring and visualizing Internet of Things (IoT) device data through Thingspeak cloud.
12. Mini Project: Form a group of maximum 3 members as a team and assign unique projects for each team.

Course Code	Course Title	L	T	P	S	C
22AI101017	DATA MINING	3	-	-	-	3
Pre-Requisite	Database Management Systems					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION: This course emphasizes on the fundamental concepts of Data Mining. The course also covers concepts such as Data Pre-processing, Operational Database Systems and Data Warehouses, Mining Frequent Patterns, Classification and Prediction, Clustering, Data warehousing and Mining tools. The course also focuses on New Trends and Research Frontiers and Visualization of Multi-Dimensional Data.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Apply data pre-processing techniques to produce refined data.
- CO2.** Apply Association rules and classification techniques for data categorization.
- CO3.** Use clustering techniques for grouping similar data items and identify outliers.
- CO4.** Understand Data Mining trends and applications.
- CO5.** Implement Visualization of Multi-dimensional Data

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1 DATA MINING AND DATA PREPROCESSING (08 Periods)

Introduction to Data Mining, kinds of data, kinds of patterns, major issues in Data Mining, Data Pre-processing, Data Cleaning, Data Integration, Data Reduction, Data Transformation and Discretization.

Module 2 ASSOCIATIONS AND CLASSIFICATION (10 Periods)

Basic Concepts, Frequent itemset Mining Methods, pattern evaluation methods- From Association Mining to Correlation Analysis, Classification, Decision Tree Introduction, Bayesian Classification Methods, Rule Based Classification, Prediction: Linear Regression.

Module 3 CLUSTER ANALYSIS (09 Periods)

Cluster Analysis: Types of Data in Cluster Analysis, A Categorization of Major Clustering Methods, Partitioning Methods-k-Means and K-Medoids, Hierarchical methods-Agglomerative and divisive method, Density-Based Method-DBSCAN, Grid-Based Method-STING, Outlier Analysis.

Module 4 DATA MINING TRENDS (09 Periods)

Mining Complex Data Types: Mining sequence data, Mining other kinds of data: Spatial, Text, Multimedia and Web data.

Data Mining Trends: Mining Complex Data Types, Methodologies of Data Mining, Data Mining Applications, Data Mining and Society, Data Mining Trends.

Module 5 VISUALIZATION OF MULTI-DIMENSIONAL DATA (09 Periods)

Introduction, Diagrams for Multidimensional visualization, Kiviat diagrams, 3D Scattergram, 3D Line Graph, Chernoff Faces, Volume Rendering, **Visual Data Mining** - Animation

Total Periods: 45

EXPERIENTIAL LEARNING:

1. Create a dataset using ARFF and CSV formats and load into the Weka Explorer.
2. List all the categorical attributes and the real-valued attributes separately in 'German credit' data set.

(It's an indicative one. The Course Instructor may change the activities and the same shall be reflected in Course Handout)

22AI101019	QUANTUM COMPUTING	3	-	-	-	3
Pre-Requisite	-					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION: This course emphasizes A basic introduction to quantum mechanics, linear algebra and familiarity with the Dirac notation. It is followed by an introductory treatment of quantum computation and quantum information covering aspects of quantum entanglement, quantum algorithms, and quantum channels. Rudimentary quantum and associated simulators are discussed.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Understand the concepts of Elementary Quantum mechanics Computing.
- CO2.** Demonstrate knowledge in Quantum correlation and its relevant operations.
- CO3.** Apply the concepts of Quantum Cryptography to real-time problems.
- CO4.** Analyze and apply the available set of gates, circuits and algorithms required in Quantum Computing.
- CO5.** Use a Quantum Computing simulator to perform basic quantum measurement and state analysis operations.

COURSE CONTENT

Module 1 INTRODUCTION

(08 Periods)

Elementary quantum mechanics; linear algebra for quantum mechanics, Quantum states in Hilbert space, The Bloch sphere, Density operators, generalized measurements, no-cloning theorem.

Module2 QUANTUM CORRELATIONS (10 Periods)

Belline qualities and entanglement, Schmidtdecom position,superdense coding,teleportation.

Module3 QUANTUM CRYPTOGRAPHY (09 Periods)

Quantum key distribution, Quantum coin-flipping, Position-based quantum cryptography (Qualitative Study)

Module4 QUANTUM GATES AND ALGORITHMS (09 Periods)

Universal set of gates,quantumircuits,Solovay-Kitaevtheorem,Deutsch-Jozsa algorithm,factoring

Module5 PROGRAMMING A QUANTUM COMPUTER (09 Periods)

The IBMQ, coding a quantum computer,basic quantum measurement and stateanalysis.

Total Periods:45

EXPERIENTIAL LEARNING:

1. Specifyone&two bit ConservativeGates.Explain whythey are not sufficient todo universal classical computation.
2. Implement basic gate operations on IBMQ platform

(It's an indicative one. The Course Instructor may change the activities and the same shall be reflected in Course Handout)

COURSE DESCRIPTION: This course provides the ability to formulate a problem in logical terms and basic knowledge of logical inference, decision making, algorithmic complexity and multiagent system.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Demonstrate knowledge on the origins and foundations of Agent Orientation in distributed computing
- CO2.** Analyze the interactions and communications in multi-agent system using agent-oriented methodologies
- CO3.** Evaluate the coordination and decision making process using social models in distributed robust applications.
- CO4.** Analyze industry based agencies by applying appropriate methodologies and tools.

Correlation Levels: 3:High; 2:Medium;1:Low

COURSE CONTENT

Module1:INTRODUCTION

(10 Periods)

Intelligent Agents: Introduction, Agents, Abstract Architectures for Intelligent Agents, Concrete Architectures for Intelligent Agents, Agent Programming Languages – Multi-agent Systems and Societies of Agents: Introduction, Agent Communications, Agent Interaction Protocols, Societies of Agents.

Module2:MULTI-AGENT INTERACTION AND COMMUNICATION

(10 Periods)

Multi-agent Interaction: Utilities and Preferences, Multi-agent Encounters, Dominant Strategies and Nash Equilibria, Competitive and Zero-Sum Interactions, The Prisoner's Dilemma, Other Symmetric 2 x 2 Interactions, Dependence Relations in Multi-agent Systems.

Communication:Speech Acts,Agent Communication Languages,Ontologies for Agent Communication,Coordination Languages

Module3 MULTI-AGENTMETHODOLOGIES

(09 Periods)

Agent-Based Solution Appropriate, Agent-Oriented Analysis and Design Techniques,Pitfalls of Agent Development,Mobile Agents.

Module4 COORDINATION AND SOCIAL MODELS

(08 Periods)

Working Together: Cooperative Distributed Problem Solving, Task Sharing and Result Sharing,Result Sharing,CombiningTask and Result Sharing,Handling Inconsistency

Coordination, Multi agent Planning and Synchronization - Distributed Rational Decision Making: Evaluation Criteria, Voting, Auctions, Bargaining, General Equilibrium Market Mechanisms,Contract Nets,Coalition Formation.

Module5 APPLICATIONS OF AGENT-ORIENTED DESIGN

(08 Periods)

Application:Agents for Work flow and Business Process Management,Agents for Distributed Sensing, Agents for Information Retrieval and Management, Agents for Electronic Commerce,Agents for Human-Computer Interfaces,Agents for Virtual Environments, Agents for Social Simulation, Agents for X - Industrial and Practical Applications: Use DAI in Industry, Overview of the Industrial Life-Cycle, Life Cycle Are Agents Used,Industry Constrain the Life Cycle of an Agent-Based System,Development Tools.

Total Periods: 45

EXPERIENTIAL LEARNING:

1. Suppose the agents play for a fixed number of times (say three times). Give two equilibria if the game is repeated more, otherwise give the unique equilibrium and explain why there is only one. Hint: Consider the last time first.
2. Assume there is a discount factor of γ , which means there is a probability γ of stopping at each stage. Is tit-for-tat a Nash equilibrium for all values of γ ? If so, prove it. If not, for which values of γ is it a Nash equilibrium?
3. Suppose there is a resource that two agents may want to fight over. Each agent chooses to act as a hawk or as a dove. Suppose the resource is worth R units, where $R > 0$. If both agents act as doves, they share the resource. If one agent acts as a hawk and the other as a dove, the hawk agent gets the resource and the dove agent gets nothing. If they both act like hawks, there is destruction of the resource and the reward to both is $-D$, where $D > 0$. This is depicted by the following pay off matrix:

		Agent 2	
		dove	hawk
Agent 1	dove	$R/2, R/2$	$0, R$
	hawk	$R, 0$	$-D, -D$

(It's an indicative one. The Course Instructor may change the activities and the same shall be reflected in Course Handout)

SPECIALIZATION ELECTIVE

Course Code	Course Title	L	T	P	S	C
22AI101006	MARKOV DECISION PROCESSES	3	-	-	-	3
Pre-Requisite	Artificial Intelligence					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION:

This course provides an introduction to Markov decision processes (MDPs), which is a class of problems that involve repeated decision making in stochastic environments. MDPs allow us to alter the evolution of stochastic systems by exercising control to achieve a certain objective. They have a wide range of applications within and outside transportation and operations research and play a major role in some of the state-of-the-art artificial intelligence systems. Applications in transportation such as shortest paths, pricing, signal control, demand estimation, and parking will also be discussed.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Demonstrate knowledge on the fundamental concepts of Markov decision process
- CO2.** Interpret the knowledge to design solutions to different problems using Infinite Horizon Discounted MDPs
- CO3.** Analyze the components and models of infinite horizon Markov Decision Process
- CO4.** Apply the Dynamic programming & Reinforcement Learning techniques for solving real-time problems

COURSE CONTENT

Module1 STOCHASTIC PROCESSES

(09 Periods)

Stochastic Processes, Characterization, Transient Behavior, Marginal distributions, computation of matrix powers, Modeling, Computational and conceptual exercises

Module2 FINITEHORIZONMDPS**(09 Periods)**

Discrete Time Markov Chains (DTMCs) and applications, transition probabilities and occupancy times, classification of DTMCs, limiting behavior, finite horizon MDPs, backward induction, structural results, and applications

Module3 INFINITEHORIZONDISCOUNTEDMDPS**(09 Periods)**

Banach spaces and contraction mappings, Convergence of the DP algorithm and Bellman's equation, value iteration and variants, policy iteration, linear programming methods, and applications.

Module4 INFINITEHORIZONTOTALCOSTMDPS**(09 Periods)**

Finite space models, Bellman's equations, Blackwell optimality, Existence of optimal policies, solution methods (value iteration and policy iteration), unichain and multi-chain models, and applications.

Module5 DYNAMICPROGRAMMINGANDRL**(09 Periods)**

The curses of dimensionality, ADP via Linear programming, Roll-out methods, look-ahead and Monte-Carlo Tree Search, model-free methods (TD (Lamda), Q-learning, SARSA), function approximation, and policy gradient.

Total Periods:45**EXPERIENTIAL LEARNING**

1. Case study on Solving multi-agent assignment Markov decision processes
2. Solve Shortest Path Problem in a Graph as a Markov decision processes

(It's an indicative one. The Course Instructor may change the activities and the same shall be reflected in Course Handout)

COURSE DESCRIPTION: This course is emphasize on the Coding for Reliable Digital Transmission and storage. This course also focuses on understanding Linear Block Codes, Cyclic Codes, Convolutional Codes and BCH Codes. By end of the course, students will acquire the basic knowledge and skills necessary to implement communication systems with error control capabilities.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Apply source codes and channel codes to improve the efficiency of information.
- CO2.** Analyze the coded word for error detection and correction due to channel noise
- CO3.** Design encoders and decoders for block and cyclic codes.
- CO4.** Identify the errors using error control coding like block code, convolution codes
- CO5.** Design communication systems with error control capabilities.

COURSE CONTENT

Module1 CODING FOR RELIABLE DIGITAL TRANSMISSION AND STORAGE

(09 Periods)

Mathematical model of Information, A Logarithmic Measure of Information, Average and Mutual Information and Entropy, Types of Errors, Error Control Strategies.

Module2 LINEAR BLOCK CODES

(09 Periods)

Introduction to Linear Block Codes, Syndrome and Error Detection, Minimum Distance of a Block code, Error-Detecting and Error-correcting Capabilities of a Block code, Standard array and Syndrome Decoding, Probability of an undetected error for Linear Codes over a BSC, Hamming Codes. Applications of Block codes for Error control in data storage system.

Module3 CYCLIC CODES

(09 Periods)

Description, Generator and Parity-check Matrices, Encoding, Syndrome Computation and Error Detection, Decoding, Cyclic Hamming Codes, shortened cyclic codes, Error-trapping decoding for cyclic codes, Majority logic decoding for cyclic codes.

Module4 CONVOLUTIONAL CODES

(09 Periods)

Encoding of Convolutional Codes- Structural and Distance Properties, state, tree, trellis diagrams, maximum likelihood decoding, Sequential decoding, Majority- logic decoding of Convolution codes. Application of Viterbi Decoding and Sequential Decoding, Applications of Convolutional codes in ARQ system.

Module5 BCH CODES

(09 Periods)

Minimum distance and BCH bounds, Decoding procedure for BCH codes, Syndrome computation and iterative algorithms, Error locations polynomials for single and double error correction.

Total Periods:45

EXPERIENTIAL LEARNING

1. Let C be a linear code with both even & odd weight vectors. Show that the number of even-weight code vectors is equal to the number of odd-weight code vectors.
2. Show that Hamming codes achieve the hamming bound

(It's an indicative one. The Course Instructor may change the activities and the same shall be reflected in Course Handout)

SPECIALIZATION ELECTIVE

Course Code	Course Title	L	T	P	S	C
22AI101014	GENERATIVE DEEP LEARNING	3	-	-	-	3
Pre-Requisite	Deep Learning					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION: This course emphasizes on the fundamental concepts of Generative AI technology. This course also focuses on how to use TensorFlow and Keras to create impressive generative deep learning models from scratch, including variational autoencoders (VAEs), generative adversarial networks (GANs), Transformers, normalizing flows, energy-based models, and denoising diffusion models.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Demonstrate the knowledge on generative models to solve computational problems.
- CO2.** Apply Variational auto-encoder and adversarial network models to solve problems effectively.
- CO3.** Analyze Autoregressive and Energy-based Models used for image processing.
- CO4.** Identify and Apply appropriate Diffusion based models to recover the data

CO-PO-PSO Mapping Table:

Course Correlation Mapping	3	3	3	-	-	1	1	-	-	-	-	-	-	-	3	-

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1: INTRODUCTION TO GENERATIVE DEEP LEARNING (09 Periods)

Introduction: Generative Modeling, First Generative Model, Core Probability Theory, Generative Model Taxonomy, The Generative Deep Learning Codebase.

Deep Learning: Data for Deep Learning, Deep Neural Networks, Multilayer Perceptron (MLP), Convolutional Neural Network (CNN).

Module 2: VARIATIONAL AUTOENCODERS (09 Periods)

Introduction, Autoencoders, Variational Autoencoders, Exploring the Latent Space, **Generative Adversarial Networks:** Deep Convolutional GAN (DCGAN), Wasserstein GAN with Gradient Penalty (WGAN-GP), Conditional GAN (CGAN).

Module 3 AUTOREGRESSIVE MODELS

(09 Periods)

Introduction, Long Short-Term Memory Network (LSTM), Recurrent Neural Network (RNN) Extensions, PixelCNN.

Normalizing Flow Models: C Normalizing Flows, RealNVP.

Module 4 ENERGY-BASED MODELS

(09 Periods)

Introduction, Energy-Based Models - The MNIST Dataset, The Energy Function, Sampling Using Langevin Dynamics, Training with Contrastive Divergence, Analysis of the Energy-Based Model, Other Energy-Based Models.

Module 5 DIFFUSION MODELS

(09 Periods)

Introduction, Denoising Diffusion Models (DDM), The Flowers Dataset, The Forward Diffusion Process, The Reparameterization Trick, Diffusion Schedules, The Reverse Diffusion Process, The U-Net Denoising Model, Training the Diffusion Model, Sampling from the Denoising Diffusion Model, Analysis of the Diffusion Model.

Total Periods: 45

EXPERIENTIAL LEARNING

1. Illustrate on the Generative models used in Image reconstruction
2. Appropriately demonstrate how image denoising is undertaken using Autoencoder

(It's an indicative one. The Course Instructor may change the activities and the same shall be reflected in Course Handout)

22AI101015	AI FOR ROBOTICS	3	-	-	-	3
Pre-Requisite	Artificial Intelligence					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION: This course provides a detailed Introduction to AI and Intelligent Robot; Intelligent Robots; Advanced robotics and AI; Object recognition using AI; Image Recognition process; Perception and behaviour; Deliberation; Navigation; Localization; Mapping and Exploration.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1** Demonstrate the usage of Intelligent Robots and the role of Artificial Intelligence in robotic control
- CO2** Conduct behavioral analysis and Objects recognition using AI based techniques
- CO3** Design the Robot deliberation, navigation and exploration methods using AI techniques
- CO4** Apply Machine Learning approaches and train Robot Arms for interactive functionality in socio-interactive applications

Correlation Levels: 3:High; 2:Medium; 1:Low

COURSE CONTENT

Module1 INTRODUCTION TO AI AND INTELLIGENT ROBOTS (09 Periods)

Intelligent Robots: Definition, Components of a Robot, Three Modalities: Kinds of Robots, Seven Areas of AI: Intelligence.

Foundation of Advanced Robotics and AI: The basic principle of robotics and AI, Artificial intelligence and advanced robotics techniques, Introducing the robot and the development environment, Software components (ROS, Python, and Linux), Robot control systems and a decision-making framework, Soft real-time control, Control loops, The robot control system - a control loop with soft real-time control, Reading serial port in a real-time manner.

Module2 BAYESIAN CONCEPT LEARNING**(07 Periods)**

Introduction, Importance, Bayes' theorem, Bayes optimal classifier, Naïve Bayes classifier, Applications of Bayes classifier.

Module3 SUPERVISED LEARNING**(10 Periods)**

Classification: Classification model, Classification learning steps, K-Nearest Neighbor, Decision Tree, Support vector machines.

Regression: Introduction, Simple linear regression, Improving accuracy of the linear regression model, Multiple linear regression, Assumptions and problems in regression analysis.

Module4 UNSUPERVISED LEARNING**(09 Periods)**

Introduction, Unsupervised vs supervised learning, Applications of unsupervised learning, Clustering as a machine learning task, Types of clustering techniques, Partitioning methods, K-Medoids, Hierarchical clustering, DBSCAN.

Module5 ARTIFICIAL NEURAL NETWORKS**(09 Periods)**

Artificial neuron, Types of activation functions, Early implementations of ANN, Architectures of neural network, Learning process in ANN, Back propagation.

Total Periods:45**EXPERIENTIAL LEARNING**

1. Use Naïve Bayes classifier to solve the credit card fraud detection problem.
2. Build a neural network that will read the image of a digit and correctly identify the number.

(It's an indicative one. The Course Instructor may change the activities and the same shall be reflected in Course Handout)

SPECIALIZATION ELECTIVE

Course Code	Course Title	L	T	P	S	C
22AI101013	APPROXIMATION ALGORITHMS	3	-	-	-	3
Pre-Requisite	Design and Analysis of Algorithms					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION: This course is an introduction to the techniques and results of the field of approximation algorithms. This course is about approximation algorithms for NP-hard optimization problems and their limitations. the course should understand many o new optimization problems.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Demonstrate knowledge on Combinatorial Algorithms.
- CO2.** Apply MultiwayCut, k -Cut and k -Center techniques to solve problems
- CO3.** Identify suitable algorithms for solving Shortest Superstring, Knapsack, Scheduling and Euclidean problems
- CO4.** Apply LP-Based and Shortest VectorAlgorithms for optimization of Problems

CO-PO-PSO Mapping Table:

Course Outcomes	Program Outcomes												Program Specific Outcomes			
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3	PSO4

CO2	3	2	3	-	-	1	-	-	-	-	-	-	3	-	-	-
CO3	3	3	-	-	-	-	-	-	-	-	-	-	3	-	-	-
CO4	2	3	2	-	-	-	2	-	-	-	-	-	3	-	-	-
Course Correlation Mapping	1	3	3	-	-	1	2	-	-	-	-	-	3	-	-	-

Correlation Levels: 3: High; 2: Medium;1: Low

COURSE CONTENT

Module 1: INTRODUCTION AND COMBINATORIAL ALGORITHMS (09 Periods)

Introduction: Lower bounding OPT, An approximation algorithm for cardinality vertex cover, Well-characterized problems and min-max relations.

Set Cover: The greedy algorithm, Layering, Application to shortest superstring, **Steiner Tree and TSP** - Metric Steiner tree, Metric TSP.

Module 2: MULTIWAYCUT, K-CUT AND K-CENTER**(07 Periods)**

Multiway Cut- The multiway cut problem, The minimum k -cut problem, **k -Center** - Parametric pruning applied to metric k - center, The weighted version, **Feedback Vertex Set** - Cyclomatic weighted graphs, Layering applied to feedback vertex set.

Module 3 SHORTEST SUPERSTRING, KNAPSACK, SCHEDULING AND EUCLIDEAN**(10 Periods)**

Shortest Superstring - A factor 4 algorithm, Improving to factor, Achieving half the optimal compression, Knapsack - A pseudo-polynomial time algorithm for knapsack, An FPTAS for knapsack, Strong NP-hardness and the existence of FPTAS's, Is an FPTAS the most desirable approximation algorithm?, Bin Packing - An asymptotic PTAS

Minimum Makespan Scheduling - Factor 2 algorithm, PTAS for minimum makespan, Bin packing with fixed number of object sizes, Reducing makespan to restricted bin packing, Euclidean TSP - The algorithm, Proof of correctness

Module 4 LP-BASED ALGORITHMS**(10 Periods)**

The LP-duality theorem Min-max relations and LP-duality, Fundamental algorithm design techniques, A comparison of the techniques and the notion of integrality gap, Set Cover via Dual Fitting - Dual-fitting-based analysis for the greedy set cover algorithm, Generalizations of set cover.

Module 5 SHORTEST VECTOR**(09 Periods)**

Bases, determinants, and orthogonality defect, The algorithms of Euclid and Gauss, Lower bounding OPT using Gram-Schmidt orthogonalization, Extension to n dimensions, The dual lattice and its algorithmic use

Total Periods: 45**EXPERIENTIAL LEARNING**

1. Prove that if the Gomory-Hu tree for an edge-weighted undirected graph G contains all $n - 1$ distinct weights, then G can have only one minimum weight cut.
2. Show that if the edge costs do not satisfy the triangle inequality, then the k -center problem cannot be approximated within factor $a(n)$ for any computable function $a(n)$.

(It's an indicative one. The Course Instructor may change the activities and the same shall be reflected in Course Handout)

Course Code	Course Title	L	T	P	S	C
22AI101023	COMPUTER VISION	3	-	-	-	3

Pre-Requisite

Anti-Requisite -

Co-Requisite -

COURSE DESCRIPTION: This course provides a detailed discussion and hands-on experience on Concepts of low-level vision, Image filtering operations, Masking, Thresholding techniques, Edge Detection, Dilation and erosion, Background subtraction, Shot boundary detection, Interactive segmentation, Clustering based segmentation, Texture, Classification, Overfitting, Receiver Operator curves, Object detection and recognition and Information Retrieval methods.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Analyze computer vision techniques for image enhancement, synthesis and segmentation.
- CO2.** Apply threshold techniques, morphological process and region growing methods for edge detection in images.
- CO3.** Develop clustering-based segmentation solutions for image synthesis.
- CO4.** Synthesize and Evaluate classification procedures for texture and feature analysis.
- CO5.** Select and Apply appropriate techniques for object recognition and detection in computer vision-based applications.

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1 INTRODUCTION AND IMAGE ENHANCEMENT

(08 Periods)

The nature of the vision, Low-level vision – Gray scale versus color, Image processing operations; Basic image filtering operations – Gaussian smoothing, Median filters, Mode Filters, Rank Order Filters, Sharp and Unsharp masking.

Module 2 THRESHOLDING AND EDGE DETECTION

(10 Periods)

Region-growing methods, Thresholding, Adaptive thresholding, Threshold selection – Variance-based thresholding, Entropy-based thresholding, Maximum likelihood thresholding; Global valley approach to thresholding; Edge Detection – Template Matching Approach, 3×3 Template Operators, Canny Operator, Laplacian Operator; Dilation and erosion in binary images – Properties of dilation and erosion operators, Closing and opening.

Module 3 SEGMENTATION BY CLUSTERING

(09 Periods)

Grouping and gestalt, Important applications – Background subtraction, Shot boundary detection, Interactive segmentation, Forming imaging regions; Image segmentation by clustering pixels, Segmentation, clustering and graphs – Terminology and facts for graphs, Agglomerative clustering with a graph, Divisive clustering with a graph, Normalized cuts.

Module 4 CLASSIFICATION AND DETECTION OF OBJECTS

(11 Periods)

Texture – Spots and bars, Representation, Synthesizing textures and filling holes in images, Shape from texture; Learning to classify – Using loss to determine decisions, Training error, test error and overfitting, Regularization, Error rate and Cross-validation, Receiver operating curves; Classifying images – Classifying images of single objects; Detecting objects in images – The sliding window method.

Module 5 OBJECT RECOGNITION, APPLICATIONS

(07 Periods)

Object Recognition – Categorization, Selection, Feature questions, Geometric questions, Semantic questions; Applications – Classifying materials, Classifying scenes, Tracking people.

Total Periods: 45

EXPERIENTIAL LEARNING

1. Implement Image sharpening using 2-D Laplacian high pass filter in spatial domain.
2. Implement Edge detection in a segmented binary image using Canny edge detector.
(It's an indicative one. The Course Instructor may change the activities and the same shall be reflected in Course Handout)

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1 INTRODUCTION

(09 Periods)

Definition of data science, Skills for data science, Tools for data science, Data types, Data collections, Data preprocessing, Data analysis and data analytics, Descriptive analysis, Diagnostic analytics, Predictive analytics, Prescriptive analytics, Exploratory analysis, Mechanistic analysis.

Module 2 DATA EXTRACTION

(09 Periods)

Extracting meaning from data – Feature selection, User retention, Filters, Wrappers, Entropy, Decision tree algorithm; Random forests, The dimensionality problem, Single value decomposition, Principal component analysis.

Module 3 DATA VISUALIZATION

(08 Periods)

A Brief matplotlib API primer, Plotting with Pandas and Seaborn – Line plots, Bar plots, Histograms and density plots, Scatter plots, Facet grids and Categorical data; Other Python visualization tools

Module 4 STATISTICAL THINKING

(11 Periods)

Distributions – Representing and plotting histograms, Outliers, Summarizing distributions, Variance, Reporting results; Probability mass function – Plotting PMFs, Other visualizations, The class size paradox, Data frame indexing; Cumulative distribution functions – Limits of PMFs, Representing CDFs, Percentile based statistics, Random numbers, Comparing percentile ranks; Modeling distributions – Exponential distribution, Normal distribution, Lognormal distribution.

Module 5 TIME SERIES ANALYSIS AND PREDICTIVE MODELING

(08 Periods)

Time series analysis – Importing and cleaning, Plotting, Moving averages, Missing values, Serial correlation, Autocorrelation; Predictive modeling – Overview, Evaluating predictive models, Building predictive model solutions, Sentiment analysis.

Total Periods: 45

EXPERIENTIAL LEARNING

1. Building a student information chatbot
2. Fake news detection

(It's an indicative one. The Course Instructor may change the activities and the same shall be reflected in Course Handout)

COURSE DESCRIPTION: : This course provides a detailed Machine learning with shallow neural networks, Training deep neural networks, Backpropagation, Gradient based strategies, Teaching deep learners, Recurrent neural networks, Applications of Recurrent neural networks, Convolutional Architectures-AlexNet; VGG,GoogleNet; ResNet.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Acquire working knowledge of neural networks and explore the different parameters of the network.
- CO2.** Construct a generative model for learning probability distribution using RBM.
- CO3.** Analyze temporal sequential input data using gated memory based neural units.
- CO4.** Utilize Convolutional Neural Network for analyzing visual imagery and utilize transfer learning approaches for reducing the training efforts.
- CO5.** Apply encoder-decoder architecture for image denoising, and learning representation of a set of data.
- CO6.** Work Independently to solve problems with effective communication.

COURSE CONTENT

Module 1 MACHINE LEARNING WITH SHALLOW NEURAL NETWORKS (09 Periods)

Neural Architectures for Binary Classification Models, Neural Architectures for Multiclass Models, Backpropagated Saliency for Feature Selection, Autoencoders- Basic Principles, Nonlinear Activations, Deep Autoencoders, Application to Outlier Detection.

Module 2 TRAINING DEEP NEURAL NETWORKS (09 Periods)

Backpropagation: Backpropagation with the Computational Graph Abstraction, Dynamic Programming, Backpropagation with Post-Activation and Pre-Activation variables, Examples of Updates for Various Activations, Loss Functions on Multiple Output Nodes and Hidden Nodes, Backpropagation Tricks for Handling Shared Weights; Setup and Initialization Issues.

Gradient based Strategies: Learning Rate Decay, Momentum-Based Learning, Parameter-Specific Learning Rates, Cliffs and Higher-Order Instability, Gradient Clipping, Second-Order Derivatives, Polyak Averaging, Local and Spurious Minima.

Module 3 GENETIC ALGORITHMS (09 Periods)

The Bias-Variance Trade-Off, Generalization Issues in Model Tuning and Evaluation, Penalty-Based Regularization, Ensemble Methods, Early Stopping, Unsupervised Pretraining, Regularization in Unsupervised Applications.

Module 4 RECURRENT NEURAL NETWORKS (09 Periods)

Recurrent Neural Networks: Expressiveness of Recurrent Networks, The Architecture of Recurrent Neural Networks, The Challenges of Training Recurrent Networks. Long Short-Term Memory (LSTM), Gated Recurrent Units (GRUs).

Applications of Recurrent Neural Networks: Automatic Image Captioning, Sequence-to-Sequence Learning and Machine Translation, Sentence-Level Classification, Time-Series Forecasting and Prediction, End-to-End Speech Recognition.

Module 5 CONVOLUTIONAL NEURAL NETWORKS (09 Periods)

The Basic Structure of a Convolutional Network, Training a Convolutional Network, Convolutional Architectures-AlexNet, VGG, GoogleNet, ResNet, Visualizing the Features of a Trained Network, Convolutional Autoencoders, Applications of Convolutional Neural Networks- Content-Based Image Retrieval, Object Detection, Natural Language and Sequence Learning.

Total Periods: 45

EXPERIENTIAL LEARNING

1. Perform splitting of data for training, testing, and validation using k-fold cross validation.
2. Construct and implement multi-layer feed forward neural network for hand written digit classification problem.
3. Implement the image dimensionality reduction problem using a AutoEncoder architecture.
4. Perform hyper parameter tuning using Bayesian optimization technique for a Convolution Neural Network.
5. Analyze the effectiveness of various optimization algorithm with a image classification problem.
6. Solve the overfitting problem in a neural architecture using DropOut technique.
7. Solve a seq2seq problem (machine translation) using LSTM Recurrent Neural Architecture.
8. Solve a time series forecasting (stock prediction) using LSTM RNN.

9. Implement a binary and multi class image classification using Convolution Neural Network.
10. Study the efficiency of the transfer learning approach for a classification problem on the following architectures; VGG-16, Alexnet, and ResNet

SPECIALIZATION ELECTIVE

Course Code	Course Title	L	T	P	S	C
22AI101003	DIGITAL IMAGE PROCESSING	3	-	-	-	3
Pre-Requisite	Calculus and Transformation Techniques					

COURSE DESCRIPTION: This course provides discussion on the fundamentals of digital image, Image processing techniques, Mathematical tools used in image processing and applications of image processing in various fields. The concepts covering image enhancement through Fourier transforms, filtering in the frequency domain, image segmentation, feature extraction, image degradation/restoration process and color image processing are explored in detail.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Demonstrate knowledge on the fundamental concepts of image processing and mathematical tools used in image processing.
- CO2.** Apply Fourier transforms for filtering and image enhancement in the frequency domain.
- CO3.** Select and apply appropriate image segmentation and feature extraction techniques for image analysis and recognition.
- CO4.** Identify the causes of image degradation and apply appropriate methods for image restoration based on specific degradation scenarios.
- CO5.** Analyze and Apply Color models, Color Transformations and Segmentation to enhance visual perception and achieve desired image effects.

Course Correlation Mapping	3	3	2	3	1	-	-	-	-	-	-	-	-	-	3	-

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module1: DIGITAL IMAGE FUNDAMENTALS (11 Periods)

Digital Image Processing Definition, Examples of Fields that Use Digital Image Processing – Gamma-Ray Imaging, X-Ray Imaging, Imaging in the Ultraviolet Band; Fundamental Steps in Digital Image Processing, Components of an Image Processing System, Image Sensing and Acquisition, Image Sampling and Quantization, Basic Relationships between Pixels, Basic Mathematical Tools used in Image Processing – Matrix Operations, Arithmetic Operations, Image Transforms, Image Intensities as Random Variables.

Module2: INTENSITY TRANSFORMATIONS AND FILTERING (09 Periods)

Basic Intensity Transformation Functions, Histogram processing, Filtering in Frequency domain-Preliminary Concepts, Fourier Transform of Sampled functions, Discrete Fourier Transforms of one variable and two variables, Basics of Filtering in Frequency domain.

Module3 IMAGE SEGMENTATION AND FEATURE EXTRACTION (10 Periods)

Image Segmentation: Fundamentals, Point, Line and Edge detection-Background, Detection of Isolated Points, Line detection, Edge Models, Basic Edge detection.

Feature Extraction: Boundary Preprocessing, Boundary Feature descriptors, Region Feature descriptors.

Module4 IMAGE RESTORATION AND RECONSTRUCTION (08 Periods)

Model of Image Degradation/Restoration process, Noise Models, Periodic Noise Reduction using Frequency Domain Filtering, Linear, Position-Invariant Degradations, Estimating the Degradation Function, Inverse Filtering, Wiener Filtering, Constrained Least-Squares Filtering, Geometric Mean Filter.

Module5 COLOR IMAGE PROCESSING (07 Periods)

Color Models, Pseudocolor Image Processing, Full-Color Image Processing, Color Transformations, Color Image Smoothing and Sharpening, Using Color in Image Segmentation, Noise in Color Images.

Total Periods:45

EXPERIENTIAL LEARNING

1. Find the discrete Fourier transform of a gray scale image and perform inverse transform to get back the image. Analyze the rotation and convolution properties of the Fourier transform using any gray scale image. Apply histogram equalization for enhancing the given images.
2. Perform image enhancement, smoothing and sharpening, in frequency domain using different filters and compare the performances.

(It's an indicative one. The Course Instructor may change the activities and the same shall be reflected in Course Handout)

SPECIALIZATION ELECTIVE

Course Code	Course Title	L	T	P	S	C
22AI101008	GRAPH ALGORITHMS	3	-	-	-	3
Pre-Requisite	Discrete Mathematical Structures					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION: This course emphasizes on the basics of graphs, connected graphs, shortest graphs and trees. This course also focuses on Independent sets coverings and matchings and Vertex Colorings. By end of the course, students will acquire the basic knowledge, formulate and prove central theorems about trees, matching, connectivity, colouring and planar graphs.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Demonstrate knowledge on graph models and algorithms.
- CO2.** Analyse and apply the appropriate Connected graphs and shortest path algorithms for solving problems
- CO3.** Apply Tree constructs and other traversals to solve real-time problems
- CO4.** Synthesize applications using Independent sets coverings and matchings.
- CO5.** Apply core theorems and algorithms to solve problems using Vertex Colorings.

CO-PO-PSO Mapping Table:

Course Outcomes	Program Outcomes												Program Specific Outcomes

Course Correlation Mapping	3	3	3	2	-	1	-	-	-	-	-	-	3	-	-	-

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1 FUNDAMENTALS OF GRAPH

(08 Periods)

Graph as models, Matrices and Isomorphism, Decomposition and special graphs, Paths, cycles and Trails, Vertex degree and counting, Directed graphs, vertex degrees, Eulerian digraphs.

Module 2 TREES AND DISTANCE & MATCHING AND FACTORS

(10 Periods)

Properties of trees, Distance in Trees and graphs, Disjoint spanning trees, Spanning Trees and Enumeration, Optimization and Trees, Maximum matching, Hall's matching condition, Min-Max Theorems, Independent sets and covers, Maximum & Weighted bipartite matching, Tutte's 1-factor theorem.

Module 3 CONNECTIVITY AND PATHS

(09 Periods)

Cuts and connectivity, connectivity, edge connectivity, blocks, 2- connected graphs, connectivity of digraphs, K- connected and K-edge connected graphs, Applications of Menger's theorem; Network Flow Problems: Maximum network flow, Integral flows, supplies and demands, Applications of network flow techniques.

Module 4 COLORING OF GRAPHS & PLANAR GRAPHS

(09 Periods)

Vertex coloring and upper bounds: Definition and examples, Upper bounds, Brook's Theorem; Structure of K-chromatic Graphs: Graphs with large chromatic number, Extremal problems and Turan's theorem, color-critical graphs; Enumerative aspects: Counting proper colorings, Chordal graphs; Planar graphs: Embedding and Euler's formula, Characterization of planar graphs, Parameters of planarity.

Module 5 EDGES AND CYCLES

(09 Periods)

Line graph and edge coloring: Edge coloring, Characterization of line graphs; Hamiltonian Cycles: Necessary conditions, sufficient conditions, cycles in directed graphs; Planarity, coloring and cycles: Tait's theorem, Grinberg's theorem, snarks, Flows and cycle covers.

Total Periods: 45

EXPERIENTIAL LEARNING

1. Use Rectangular Blocks whose entries are all equal, write down an adjacency matrix for $K_{m,n}$.
2. Prove that a bipartite graph has a unique bipartition(exchange for interchanging the two partite sets) if and only if it is connected.

(It's an indicative one. The Course Instructor may change the activities and the same shall be reflected in Course Handout)

SPECIALIZATION ELECTIVE

Course Code	Course Title	L	T	P	S	C
22AI101007	KNOWLEDGE REPRESENTATION AND REASONING	3	-	-	-	3

Pre-Requisite Artificial Intelligence

COURSE DESCRIPTION: This course provides a discussion on the fundamental concepts of knowledge representation and first order logic. The course further delves into concepts of knowledge engineering and resolution. The course then covers reasoning, structured descriptions, action and planning.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Apply knowledge representation and reasoning in knowledge-based systems with an emphasis on first-order logic for effective reasoning and decision making.
- CO2.** Identify and utilize various types of facts, vocabulary and entailments to represent knowledge and draw logical conclusions from knowledge bases.
- CO3.** Design appropriate rule formation and search strategies using horn clauses and procedural control of reasoning.
- CO4.** Apply taxonomies and classification techniques to categorize and organize objects based on their properties and relationships.
- CO5.** Analyze the principles of the Situation Calculus to represent and reason about actions, states, and change in dynamic environments.

CO-PO-PSO Mapping Table:

Course Outcomes	Program Outcomes												Program Specific Outcomes			
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3	PSO4
CO1	3	2	2	-	-	-	-	-	-	-	-	-	-	3	-	-
CO2	3	2	1	-	-	-	-	-	-	-	-	-	-	3	-	-
CO3	3	3	2	1	-	-	-	-	-	-	-	-	-	3	-	-
CO4	3	3	1	-	-	-	-	-	-	-	-	-	-	3	-	-
CO5	3	3	1	-	-	-	-	-	-	-	-	-	-	3	-	-
Course Correlation Mapping	3	3	2	1	-	-	-	-	-	-	-	-	-	3	-	-

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module1: KNOWLEDGE REPRESENTATION AND FIRST ORDER LOGIC (07 Periods)

Knowledge, Representation, and Reasoning, Knowledge-Based Systems, The Role of Logic, Introduction to First Order Logic, The Syntax, The Semantics, The Pragmatics, Explicit and Implicit Belief

Module2: EXPRESSING KNOWLEDGE, RESOLUTION (09 Periods)

Knowledge Engineering, Vocabulary, Basic Facts, Complex Facts, Terminological Facts, Entailments, Abstract Individuals, Other Sorts of Facts, Resolution-The Propositional Case, Handling Variables and Quantifiers, Dealing with Computational Intractability.

Module3 REASONING (09 Periods)

Horn Clause, SLD Resolution, Computing SLD Derivations, Procedural Control of Reasoning- Facts and Rules, Rule Formation and Search Strategy, Algorithm Design, Specifying Goal Order, Committing to Proof Methods, Controlling Backtracking, Negation as Failure, Dynamic Databases; Rules in Production Systems- Production Systems: Basic Operation, Working Memory, Production Rules.

Module4 STRUCTURED DESCRIPTIONS (09 Periods)

Object Oriented Representation- Objects and Frames, A Basic Frame Formalism; Descriptions, A Description Language, Meaning and Entailment, Computing Entailments, Taxonomies and Classification.

Module5 DEFAULT REASONING, ACTIONS AND PLANNING (11 Periods)

Introduction, The Closed-World Assumption, Circumscription, Default Logic, Autoepistemic Logic, Actions- The Situation Calculus, A Simple Solution to the Frame Problem, Complex Actions; Planning- Planning in the Situation Calculus, The STRIPS Representation, Planning as a Reasoning Task.

Total Periods: 45

EXPERIENTIAL LEARNING

1. Choose a domain of interest, such as healthcare, finance, or robotics. Identify relevant basic facts, complex facts, and terminological facts that are essential to representing knowledge in the chosen domain. Construct a knowledge base using appropriate representation formalisms, such as first-order logic or Description Logic. Explore different types of entailments that can be derived from the knowledge base, considering both logical and semantic implications. Introduce abstract individuals to represent general concepts or categories within the domain and demonstrate their utility in reasoning.
2. Choose a domain of interest, such as healthcare, finance, or robotics. Implement a resolution-based reasoning system for the propositional case of the knowledge base, considering the handling of variables and quantifiers.
3. Investigate the computational complexity of reasoning tasks within the knowledge base and discuss strategies for dealing with computational intractability. Reflect on the challenges encountered during the knowledge engineering process and propose possible improvements or alternative approaches. Present your findings and insights through a comprehensive report or presentation, highlighting the practical implications of knowledge engineering in the chosen domain.

(It's an indicative one. The Course Instructor may change the activities and the same

shall be reflected in Course Handout)

COURSE CONTENT

Module1 MACHINE LEARNING AND SECURITY

(09 Periods)

Cyber Threat Landscape, Adversaries in Machine Learning, Machine Learning Problems and Approaches.

Algorithms and Considerations : Training Algorithms, Classification Algorithms, Practical Considerations in Classification, Clustering

Module2 ANOMALIES

(09 Periods)

Detection: Anomaly Detection–Methods–Intrusion Detection–Host Intrusion Detection, Network Intrusion Detection, Web Application Intrusion Detection.

Algorithms and Considerations: Anomaly Detection with Data and Algorithms–Forecasting, Statistical Measures, Unsupervised Machine Learning Algorithms; Challenges of using Machine Learning in Anomaly Detection, Response and Mitigation, Practical System Design Concerns.

Module3 MALWARE

(10 Periods)

Malware Analysis: Definition, Background and Classification of Malwares–Feature Generation.

Feature Engineering: Feature Classification, Sampling and Labelling Malware.

Module4 NETWORK TRAFFIC ANALYSIS

(08 Periods)

Deliberation: Overview, Strips: More Realistic Strips Example, Revisiting the Closed-

Network Defense: Machine Learning and Network Security, Intrusion Detection, Access Control and Authentication – Detecting “In-Network Attackers” – Data Centric Security, Honeypots, Botnets.

Algorithms and Considerations: Building a Predictive Model to Classify Network Attacks–Preparing, Exploring and Classification of Network Data.

Module5 PROTECTION AND ADVERSARIES

(09 Periods)

Protection: Protecting Consumer Web – Types of Abuse - Supervised Learning for Abuse Problems- Collecting and Labelling Data.

Adversarial Machine Learning: Importance, Vulnerabilities, Model Poisoning, Evasion Attack.

Total Periods: 45

EXPERIENTIAL LEARNING

1. The probability that it is Friday and that a student is absent is 3 %. Since there are 5 school days in a week, the probability that it is Friday is 20 %. What is the probability that a student is absent given that today is Friday? Apply Bayes' rule in python to get the result. (Ans: 15%)
2. Extract the data from database using python
- 1 Implement k-nearest neighbours classification using python
(It's an indicative one. The Course Instructor may change the activities and the same shall be reflected in Course Handout)

COURSE CONTENT:

Module 1 INTRODUCTION TO OPTIMIZATION

(09 periods)

Introduction to Optimization: Fundamentals of optimization, Types of optimization problems, Examples of optimization, Formulation of optimization problems, Classification of optimization algorithms, Traveling salesman problem, Knapsack problem.

Classical Optimization Techniques: Mathematical model of optimization, Linear programming – Simplex method, Revised simplex method, Kamarkar's method, Duality theorem, Decomposition principle, Transportation problem; Nonlinear Programming – Quadratic programming, Geometric

programming; Dynamic programming, Integer programming, Stochastic programming, Lagrange multiplier method.

Module 2 NATURE INSPIRED ALGORITHMS AND GENETIC ALGORITHM

(08 periods)

Nature Inspired Algorithms: Traditional vs nature inspired algorithms, Bio-inspired algorithms, Swarm intelligence, Meta heuristics, Diversification and intensification, No free lunch theorem, Parameter tuning and control, Algorithm.

Genetic Algorithm: Basics, Genetic operators, Example of GA, Algorithm, Schema theory, Prisoner's dilemma problem, Variants and hybrids of GA.

Module 3 PARTICLE SWARM, ANT COLONY, BEE COLONY AND CUCKOO SEARCH OPTIMIZATION ALGORITHMS

(10 periods)

Particle Swarm Optimization : Swarm behavior, Algorithm, Variants of algorithm.

Ant Colony Optimization: Ant colony characteristics, Ant colony optimization–Travelling salesman problem, algorithm; Variants of algorithm.

Bee Colony Optimization: Honey bee characteristics, Algorithm, Variants of algorithm.

Cuckoo Search Algorithm: Cuckoo bird behavior, Levy flights, Algorithm, Variants of algorithm.

Module 4 FIREFLY, BAT, GRAY WOLF AND ELEPHANT HERDING OPTIMIZATION ALGORITHMS

(09 periods)

Firefly Algorithm: Firefly behavior and characteristics, Algorithm, Variants and applications.

Bat Algorithm: Behavior of bats in nature, Algorithm, Variants and applications.

Gray Wolf Optimization: Gray wolf characteristics, Gray wolf optimization, Variants and applications.

Elephant Herding Optimization: Elephant herding behavior, Algorithm, Pseudo code, Variants of the algorithm.

Module 5 APPLICATIONS OF NATURE INSPIRED ALGORITHMS

(09 periods)

Image processing, Classification, clustering and feature selection, Traveling salesman problem, Vehicle routing, Scheduling, Software testing, Deep belief networks, Swarm robots, Data mining and deep learning – Clustering, Support vector machines, Artificial neural networks, Optimizers for machine learning, Deep learning.

Total Periods: 45

EXPERIENTIAL LEARNING

1. Usage of Cuckoo Search Algorithm for Data Clustering
2. How to Solve vehicle routing problem with nature-inspired algorithms

(It's an indicative one. The Course Instructor may change the activities and the same shall be reflected in Course Handout)

AND MULTI-ARM BANDITS

Reinforcement Learning: Introduction, Elements of Reinforcement Learning, Limitations and Scope, Tic-Tac-Toe, History of Reinforcement Learning

Multi-Arm Bandits: Ann-Armed Bandit Problem, Action-Value Methods, Incremental

Implementation, Tracking a Non stationary Problem, Optimistic Initial Values, Upper Confidence Bound Action Selection, Gradient Bandits, Associative Search (Contextual Bandits).

Module2 FINITE MARKOV DECISION PROCESS (09 Periods)

The Agent- Environment Interface, Goals and Rewards, Returns and Episodes, Unified Notation for Episodic and Continuing Tasks, The Markov Property, Markov Decision Processes, Value Functions, Optimal Value Functions, Optimality, and Approximation.

Module3 DYNAMIC PROGRAMMING (09 Periods)

Policy Evaluation, Policy Improvement, Policy Iteration, Value Iteration, Asynchronous Dynamic Programming Generalized Policy Iteration, Efficiency of Dynamic Programming.

Module4 MONTE CARLO METHODS AND TEMPORAL- DIFFERENCE LEARNING (09 Periods)

Monte Carlo Methods: Monte Carlo Prediction - Monte Carlo Estimation of Action Values, Monte Carlo Control, Monte Carlo Control without Exploring Starts, Off-policy Prediction via Importance Sampling, Incremental Implementation, Off-Policy Monte Carlo Control, Importance Sampling on Truncated Returns

Temporal-Difference Learning: TD Prediction - Advantages of TD Prediction Methods, Optimality on TD(0), Sarsa: On-Policy TD Control, Q-Learning: Off-Policy TD Control.

Module5 PLANNING AND LEARNING (09 Periods)

Models and Planning, Integrating Planning, Acting, and Learning, Model Incorrectness, Prioritized Sweeping, Full vs. Sample Backups, Trajectory Sampling, Heuristic Search, Monte Carlo Tree Search.

Total Periods: 45

EXPERIENTIAL LEARNING

1. In class we saw that it is possible to learn via a sequence of stationary policies, i.e., during an episode, the policy does not change, but we move to a different stationary policy before the next episode begins. Does the temporal difference method encountered when discussing the tic-tac-to example follow this pattern of learning?
2. Suppose, instead of playing against a random opponent, there is reinforcement learning algorithm described above played against itself, with both sides learning. What do you think would happen in this case? Would it learn a different policy for selecting moves?

(It's an indicative one. The Course Instructor may change the activities and the same shall be reflected in Course Handout)

COURSE DESCRIPTION: This course provides a detailed discussion on Soft computing techniques concepts, Supervised learning networks, Genetic algorithms, Fuzzy logic, Hybrid soft computing techniques and applications.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Investigate soft computing techniques for solving computational problems.
- CO2.** Design efficient neural architectures to model patterns for a given learning problem.
- CO3** Investigate and solve optimization problems using genetic algorithms.
- CO4.** Apply fuzzy logic and reasoning to handle uncertainty in engineering problems.
- CO5.** Develop intelligent solutions using hybrid soft computing techniques to solve problems of multi disciplinary domains.

COURSE CONTENT

Module1 INTRODUCTION TO SOFT COMPUTING AND SUPERVISED LEARNING NETWORKS (10 Periods)

Introduction to Soft Computing: Neural networks, Application scope of neural networks, Fuzzylogic, Genetic algorithm, Hybrid systems, Soft computing.

Artificial Neural Networks: Fundamentals, Basic Models, Terminologies, Linear Separability, Hebb network.

Supervised Learning Networks: Perceptron Networks- Theory, Perceptron learning rule, Architecture, Flow chart for training process, Perceptron training algorithm for single and multiple output classes, Perceptron network testing algorithm; Back-Propagation Network - Theory, Architecture, Flow chart for training process, Training algorithm, Learning factors of back-propagation network, Testing algorithm for back-propagation network.

Module2 UNSUPERVISED LEARNING NETWORKS (08 Periods)

Fixed weight competitive nets – Maxnet, Mexican Hat Net, Hamming network; Kohonen self-organizing feature maps – Theory, Architecture, Flowchart, Training algorithm; Learning vector quantization – Theory, Architecture, Flowchart, Training algorithm, Variants; Counterpropagation networks – Theory, Full counterpropagation Net, Forward-only counterpropagation Net; Adaptive resonance theory network – Fundamental architecture, Fundamental operating principle, Fundamental algorithm.

Module3 GENETIC ALGORITHMS (09 Periods)

Genetic algorithms – Biological background, Traditional optimization and search techniques, Genetic algorithm and search space, Genetic algorithms vs. traditional algorithms, Basic terminologies in genetic algorithm, Simple GA, General genetic algorithm, Operators in genetic algorithm, Stopping condition for genetic algorithm flow, Constraints in genetic algorithm, Problem solving using genetic algorithm, Adaptive genetic algorithms, Hybrid genetic algorithms, Advantages and limitations of genetic algorithm, Applications of genetic algorithm.

Module4 FUZZY LOGIC (11 Periods)

Introduction to fuzzy logic, Classical sets, Fuzzy sets, Membership function – Features, Fuzzification, Methods of membership value assignments; Fuzzy arithmetic and measures – Fuzzy arithmetic, Extension principle, Fuzzy measures, Measures of fuzziness, Fuzzy integrals; Fuzzy rule base and approximation reasoning – Truth values and tables in fuzzy logic, Fuzzy propositions, Formation of rules, Compound rules, Aggregation of fuzzy rules, Fuzzy reasoning, Fuzzy inference systems, Overview of fuzzy expert system; Fuzzy decision making, Fuzzy logic control systems.

Module5 HYBRID SOFT COMPUTING TECHNIQUES AND APPLICATIONS (07 Periods)

Hybrid Soft Computing Techniques: Genetic neuro hybrid systems, Genetic fuzzy

Hybrid and fuzzy genetic hybrid systems.

Applications of Soft Computing: Optimization of traveling salesman problem using genetic algorithm approach, Genetic algorithm-based internet search technique, Soft computing-based hybrid fuzzy controllers, Soft computing-based rocket engine control.

Total Periods:45

EXPERIENTIAL LEARNING

1. Write a program to implement Activation Functions.
2. Write a program to Generate ANDNOT,XOR function using McCulloch-Pitts neural net.
3. Write a program to implement Hebb network.
4. Write a program to implement Linear separability.
5. Write a program of Perceptron Training Algorithm.
6. Write a program to implement Back Propagation Algorithm.
7. Write a program to implement Union, Intersection, Complement and Difference operations on fuzzy sets. Also create fuzzy relation by Cartesian product of any two fuzzy sets and perform max-min composition on any two fuzzy relations.
8. Write a program to implement Union, Intersection, Complement and Difference operations on crisp sets. Also create crisp relation by Cartesian product of any two crisp sets and perform max-min composition on any two crisp relations.
9. Write a program to implement Fuzzy Interface System.
10. Implement Travelling sales person using genetic Algorithm.

Course Code	Course Title	L	T	P	S	C
22AI101022	STREAM DATA ANALYTICS	3	-	-	-	3

Pre-Requisite -

Anti-Requisite -

Co-Requisite -

COURSE DESCRIPTION: This course emphasizes on the basic concepts of stream data processing and different stream architectures. It also covers the stream data processing techniques and design principles to evaluate the stream data in both online and offline modes. By the end of this course students will acquire basic knowledge to implement statistical methods for Stream analytical applications.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Demonstrate the knowledge on the importance and challenges of Stream Data Processing.
- CO2.** Apply functional and non functional design principles for communicating different stream processing systems.
- CO3.** Identify suitable stream data processing method for effective data analysis.
- CO4.** Evaluate the Online and offline data stream by using data preprocessing and transformation techniques.
- CO5.** Analyze different design requirements to solve problems involving Stream Analytics.

COURSE CONTENT

Module1: INTRODUCTION TO STREAM DATA PROCESSING

(09 Periods)

Real Time System,Real-time Vs Streaming Systems,Architectural blue print,Security for streaming System,Data ingestion: Common and scaling interaction patterns,Fault tolerance, Analyzing streaming Data.

Module2: STREAM PROCESSING ARCHITECTURES (09 Periods)

Architectural building blocks, Architecture over view, Interaction with the system architecture, **InfoSphere Streams architecture:** InfoSphere Stream Components, Services, Functional and Non Functional Design principles and patterns for stream processing applications.

Module3: METHODS TO STREAM DATA PROCESSING (09 Periods)

Algorithms for data analysis: Accepting constraints and relaxing, Sliding window and Tumbling window timing methods, Summarization techniques, Communication Pattern techniques, Protocols to send the data to client and Filtering the streams.

Module4: STREAM ANALYTICS (09 Periods)

Stream analytics: data pre-processing and Transformation: The mining process, Descriptive statistics, Sampling, Quantization, Dimensionality reduction.

Stream analytics: modeling and evaluation: Offline modeling and online evaluation, Data stream classification, Data stream clustering, Data stream regression.

Module5: STREAM ANALYTICS APPLICATIONS (09 Periods)

The Operations Monitoring application, The Patient Monitoring application, The Semi conductor Process Control applications: Requirements, Design, Evaluation and User Interface.

Total Periods:45

EXPERIENTIAL LEARNING

1. Create a streaming data pipe line for a Real-Time dashboard with Data flow
2. Design a frame work for Protecting Credit Card Data in an Amazon Kinesis Stream
3. Analyze fraudulent call data with Stream Analytics and visualize results in Power BI dashboard or any visualization tool.
4. Design a use case for reliable message delivery in a network connection using stream analytics

(It's an indicative one. The Course Instructor may change the activities and the same shall be reflected in Course Handout)

COURSE CONTENT:

Module-1: INTRODUCTION

(09 periods)

Overview of Predictive Analytics: Analytics, Predictive Analytics, Business Intelligence, Predictive Analytics vs. Statistics, Predictive Analytics vs. Data Mining, Challenges in Using Predictive Analytics, Educational Background. Setting up the Problem: Predictive Analytics Processing Steps, Defining Data for Predictive Modelling, Defining the Target Variable, Defining Measures of Success for Predictive Models, Doing Predictive Modelling Out of Order, and Case Study: Recovering Lapsed Donors and Fraud Detection.

Module-2: DATA UNDERSTANDING

(08 periods)

What the Data Looks Like, Single Variable Summaries, Data Visualization in One Dimension, Histograms, Multiple Variable Summaries, Data Visualization, Two or Higher Dimensions, The Value of Statistical Significance, Pulling It All Together into a Data Audit.

Module-3: DATA PREPARATION

(08 periods)

Variable Cleaning: Incorrect Values, Consistency in Data Formats, Outliers, Multi-dimensional Outliers, Missing Values, Fixing Missing Data. Feature Creation: Simple Variable Transformations, Fixing Skew, Binning Continuous Variables, Numeric Variable Scaling, Nominal

Variable Transformation, Ordinal Variable Transformations, Date and Time Variable Features, ZIP Code Features, Multidimensional Features, Variable Selection Prior to Modelling, Sampling.

Module-4: ASSOCIATION RULES AND DESCRIPTIVE MODELING (10 periods)

Item sets and Association Rules: Terminology, Condition, Left-Hand-Side, Antecedent, Right-Hand-Side, Consequent, Output, Conclusion, Rule (Item Set), Support, Antecedent Support, Confidence, Accuracy, Lift. Parameter Settings, How the Data Is Organized, Measures of Interesting Rules, Deploying Association Rules, Problems with Association Rules, Building Classification Rules from Association Rules.

Descriptive Modeling: Data Preparation Issues with Descriptive Modeling, Principal Component Analysis, Clustering Algorithms.

Module-V: PREDICTIVE MODELING (10 periods)

Predictive Modeling and Assessing Predictive Models: Batch Approach to Model Assessment, Assessing Regression Models. Model Ensembles: Motivation for Ensembles, Bagging, Boosting, Improvements to Bagging and Boosting, Model Ensembles and Occam's razor, Interpreting Model Ensembles. Model Deployment, HelpDesk Case Study.

Total Periods: 45

EXPERIENTIAL LEARNING

1. Develop a case study on Healthcare prediction using Predictive Analytics
2. How predictive analytics will enable Customer Churn Prediction.
3. Prepare a Report on Challenges that Organizations need to face with Predictive analytics.
4. Demonstrate how Privacy and Security can be ensured in Predictive Analytics.

SPECIALIZATION ELECTIVE

Course Code	Course Title	L	T	P	S	C
22AI101021	Generative AI	3	-	-	-	3
Pre-Requisite	- Machine Learning					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION:

This course provides a comprehensive exploration of large language models (LLMs) and their applications. The training of LLMs is examined in-depth, including data collection, bidirectional token prediction, and fine-tuning, along with emergent properties and biases. The course also addresses data privacy and safety, covering post-processing, reinforcement learning, and best practices. Finally, it explores the workings, security, and ethical considerations of major AI chatbots such as ChatGPT, Microsoft Copilot, etc.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

CO7. Understand the Fundamentals of Large Language Models

CO8. Demonstrate the methodologies used in training LLMs, including data collection, Fine-tuning LLMs, and bidirectional token prediction.

CO9. Implement safety-focused improvements for LLM-generated content, including post-processing detection algorithms and content filtering.

CO10. Apply emotional attachment and social penetration theories to human-chatbot interactions.

CO11. Develop and utilize simple prompts to effectively interact with AI chatbots, and critically assess their reasoning, summarizing capabilities, and truthfulness.

Course Correlation Mapping	2	2	2	2	3	2	-	-	-	-	-	-	-	-	-	-

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1 Large language models

(09 Periods)

Introduction, Large language models: The power of AI, Evolution of natural language processing, Conversational LLMs, OpenAI's ChatGPT Google's Bard/LaMDA Microsoft's Bing AI, Meta's LLaMa/Stanford's Alpaca

Module 2 Training large language models

(09 Periods)

Introduction, Training LLMs, Exploring open web data collection, Demystifying autoregression and bidirectional token prediction, Fine-tuning LLMs, The unexpected: Emergent properties of LLMs, Learning with few examples Is emergence an illusion, What's in the training data?, Encoding bias, Sensitive information.

Module 3 Data privacy and safety with LLMs

(09 Periods)

Safety-focused improvements for LLM generations, Post-processing detection algorithms Content filtering or conditional pre-training, Reinforcement learning from human feedback Reinforcement learning from AI feedback, Navigating user privacy and commercial risks, Inadvertent data leakage, Best practices when interacting with chatbots

Module 4 Making social connections with chatbots

(09 Periods)

Chatbots for social interaction, The loneliness epidemic, Emotional attachment theory and chatbots, Attachment Theory, The good and bad of human-chatbot relationships, Social Penetration Theory, Charting a path for beneficial chatbot interaction.

Module 5 ChatGPT and AI Chatbots Periods)

(09

Introduction, The 'Big Three' AI Chatbots, ChatGPT, Microsoft Copilot, Google Bard, How AI Chatbots Work, Security and privacy, Simple Prompts, Reasoning and Summarising, Truthiness and Chatbots.

Total Periods: 45

EXPERIENTIAL LEARNING

1. Use the OpenAI API to interact with ChatGPT, Bard, Bing AI, LLaMa, and Alpaca. Create simple applications that leverage these models for various tasks (e.g., customer support, content generation).
2. Collect and preprocess a dataset from the web for training a simple language model.
3. Implement content filtering and post-processing detection algorithms on LLM outputs.

(It's an indicative one. The Course Instructor may change the activities and the same shall be reflected in Course Handout)

COURSE CONTENT

Module 1: Introduction to Python **(10 Periods)**

Data types – Operators – Input and Output – Control Statements – Functions – Strings

Module 2: Data Structures **(09 Periods)**

Arrays – Lists and Tuples – Dictionaries – Modules – Numpy - Pandas

Module 3: Object Oriented Programming **(09 Periods)**
OOPS – Classes and Objects – Inheritance and Polymorphism – File Handling – Exception Handling

Module 4: Modules and Regular Expressions **(08 Periods)**
Expression Evaluation - Threads – Multithreading – Multiprocessing

Module 5: Advanced Programming **(09 Periods)**
Date and Time – Networking – GUI Programming

Total Periods: 45

EXPERIENTIAL LEARNING

LIST OF EXERCISES:

1. Write a Pandas program to create and display a one-dimensional array-like object containing an array of data using Pandas module.
2. Write a Pandas program to add, subtract, multiple and divide two Pandas Series.
Sample Series: [2, 4, 6, 8, 10], [1, 3, 5, 7, 9]
3. Write a Pandas program to convert a NumPy array to a Pandas series.
4. Write a Pandas program to convert a given Series to an array.
5. Write a Python program to generate a random color hex, a random alphabetical string, random value between two integers (inclusive) and a random multiple of 7 between 0 and 70. Use random.randint()
6. Write a Python program to shuffle the elements of a given list. Use random.shuffle()
7. Write a Python program to check if a function is a user-defined function or not. Use types.FunctionType, types.LambdaType()
8. Write a Python program to check if a given value is compiled code or not. Also check if a given value is a module or not. Use types.CodeType, types.ModuleType()
9. Write a Python program that creates a generator function that yields cubes of numbers from 1 to n. Accept n from the user.
10. Write a Python program to create a generator that generates all possible permutations of a string.
11. Write a Python GUI program to import Tkinter package and create a window. Set its title and add a label to the window.
12. Write a Python GUI program to create a window and disable to resize the window using tkinter module.

22AI101101	INTRODUCTION TO ARTIFICIAL INTELLIGENCE & MACHINE LEARNING	3	-	-	-	3
Pre-Requisite	-					
Anti-Requisite	Artificial Intelligence					
Co-Requisite	-					

COURSE DESCRIPTION: This course provides a detailed discussion on Introduction to Artificial Intelligence, Designing intelligent agents, Solving general purpose problems, Search in complex environments, Probabilistic reasoning, Represent knowledge and reason under uncertainty, Machine Learning Concepts, Applications and Ethics & safety in AI.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Architect intelligent agents using artificial intelligence techniques and principles.
- CO2.** Analyze and interpret the problem, identify suitable solutions using heuristic functions, optimization algorithms and search algorithms.
- CO3.** Select and apply appropriate knowledge representation to build Bayesian network models to reason under uncertainty.
- CO4.** Investigate the Machine Learning Techniques
- CO5.** Demonstrate knowledge on Applications & ethical implications of intelligent machines for providing privacy, trust, security and safety.

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1 INTRODUCTION TO ARTIFICIAL INTELLIGENCE (09 Periods)

Foundations of artificial intelligence, History of artificial intelligence, State of the art, Risks and benefits of AI, Intelligent agents – Agents and environments, The concept of rationality, Structure of agents.

Module 2 PROBLEM SOLVING BY SEARCHING (12 Periods)

Problem solving agents, Search algorithms, Uninformed search strategies, Informed search strategies – Greedy best-first search, A* search; Heuristic functions.

Local search algorithms and optimization problems – Hill-climbing search, Simulated annealing, Local beam search, Evolutionary algorithms; Optimal decisions in games – The minimax search algorithm, Optimal decisions in multiplayer games, Alpha-Beta pruning, Move ordering; Monte Carlo tree search

Module 3 PROBABILISTIC APPROACH (09 Periods)

Representing Knowledge in an uncertain domain, Semantics of Bayesian networks, Probabilistic reasoning over time – Time and uncertainty, Inference in temporal models, Hidden Markov models, Kalman Filter.

Module 4 MACHINE LEARNING (08 Periods)

Machine Learning, Associations, Classification, Regression, How do machines learn, Machine learning process, Classification of machine learning algorithms, Reinforcement learning, Supervised learning, Unsupervised learning, Semi-Supervised learning, Algorithms

Module 5 APPLICATIONS & ETHICS (07 Periods)

Natural Language Processing-Language Models, Grammar; Computer Vision-Introduction, Simple Image Features; Robotics-Robots & Hardware; Ethics, and Safety

Total Periods: 45

EXPERIENTIAL LEARNING

LIST OF EXERCISES:

1. Solve the travelling sales man problem using Hill Climbing search algorithm
2. Design and implement solution for 8-puzzle problem using Greedy Best First Search.
3. Design and implement a stock prices forecasting model using Hidden Markov Model.

RESOURCES

COURSE DESCRIPTION: This course provides a detailed discussion on Introduction to Artificial Intelligence, Designing intelligent agents, Solving general purpose problems, Search in complex environments, Probabilistic reasoning, Represent knowledge and reason under uncertainty, Machine Learning Concepts, Applications and Ethics & safety in AI.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Architect intelligent agents using artificial intelligence techniques and principles.
- CO2.** Analyze and interpret the problem, identify suitable solutions using heuristic functions, optimization algorithms and search algorithms.
- CO3.** Select and apply appropriate knowledge representation to build Bayesian network models to reason under uncertainty.
- CO4.** Investigate the Machine Learning Techniques
- CO5.** Demonstrate knowledge on Applications & ethical implications of intelligent machines for providing privacy, trust, security and safety.

SPECIALIZATION ELECTIVE-IBM

Course Code	Course Title	L	T	P	S	C
22AI102102	MACHINE LEARNING USING PYTHON	3	-	2	-	4

Pre-Requisite Python Programming, Python for Data Analysis

COURSE DESCRIPTION: This course provides a discussion on the fundamentals of machine learning and learning types. The course further delves into simple and multiple linear regression, classification algorithms, neural networks and ensemble methods. The course then covers general applications of clustering, types of clusters, and clustering algorithms.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Analyze the process of machine learning modeling and evaluation to automatically infer a general description for a given learning problem.
- CO2.** Design and implement machine learning solutions for classification, and regression problems.
- CO3.** Design and implement efficient neural architectures to model patterns for a given learning problem.
- CO4.** Develop intelligent solutions to solve societal problems related to computer vision information security, healthcare and other areas.
- CO5.** Analyze and apply clustering techniques for effective data analysis and pattern recognition.
- CO6.** Work independently to solve problems with effective communication.

Course Correlation Mapping	3	3	3	3	3	3	-	-	3	3	-	-	-	-	3	-

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1: INTRODUCTION TO MACHINE LEARNING

(09 Periods)

Introduction, Motivation for machine learning, Applications, Machine learning, Classification, Regression, The origin of machine learning, Uses and abuses of machine learning, How do machines learn, Steps to apply machine learning to data, Input data and Machine learning algorithm, Reinforcement learning, Supervised learning, Unsupervised learning, Semi-supervised learning, Matching data to an appropriate algorithm.

Module 2: SIMPLE AND MULTIPLE LINEAR REGRESSION

(09 Periods)

Supervised learning, Regression models, Steps in regression analysis, Linear regression, Simple linear regression, Least squares estimation, Maximum likelihood estimation, Multiple linear regression model, Interpretation of multiple linear regression coefficients: Partial regression coefficients; Logistic regression, Checking model adequacy, Over-fitting, Detecting over-fit models: Cross validation.

Module 3 INTRODUCTION TO CLASSIFICATION & CLASSIFICATION ALGORITHMS

(09 Periods)

ML classifier, Classification algorithms, Decision trees, Attribute selection measure: Information gain, ID3 algorithm; Bayesian algorithm, Support vector machine, Classification model evaluation and selection, ROC curves, Cost Benefit Analysis (CBA), Instance based learning: K-Nearest neighbor.

Module 4 ARTIFICIAL NEURAL NETWORK & ENSEMBLE METHOD

(08 Periods)

Neural networks, Activation functions, Feedforward neural network, Multi-layer perceptron, Backprop algorithm, Recurrent or feedback architecture, Perceptron rule, Gradient-descent (training examples, η), Ensemble, Why ensemble works? Ensemble of classifiers: Bagging, Boosting, Random forests.

Module 5 INTRODUCTION TO CLUSTERING & CLUSTERING ALGORITHMS

(10 Periods)

Clustering, General applications of clustering, Hard vs. soft clustering, Similarity and dissimilarity between objects, Types of clusters, Types of Clustering, Basic K - means clustering, Strengths and Weaknesses, K-medoids clustering method, Hierarchical Agglomerative Clustering: Basic Clustering algorithm, Linkage methods; DBSCAN clustering.

Total Periods: 45

EXPERIENTIAL LEARNING

The following is the sample. Faculty shall frame according to the course domain.

1. Perform Exploratory Data Analysis on any online dataset from Kaggle or UCI Machine Learning Repository.
2. Solve the stock price forecasting problem using Linear Regression after understanding the distribution of data.
3. Perform sales forecast analysis using multiple linear regression model.
4. Implement Decision Tree Classification using ID3 algorithm to classify Iris data.
5. Train an SVM based classifier to predict whether the cancer is malignant or benign.
6. Solve classification problem by constructing a feedforward neural network using Backpropagation algorithm. (Wheat Seed Data)

7. Use Naïve Bayes classifier to solve the credit card fraud detection problem.
8. Implement k-NN algorithm to solve classification problem.
9. Perform K-Means and Hierarchical clustering considering an online dataset from Kaggle.
10. Create an ensemble model using machine learning algorithms and compare the performance of the model with the existing machine learning algorithms using performance metrics such as confusion matrix, precision, recall, F-Measure, specificity, and ROC curve.

DEEP LEARNING ARCHITECTURE

COURSE CODE	COURSE TITLE	L	T	P	S	C
22AI102103	DEEP LEARNING ARCHITECTURE	3	-	2	-	4

Pre-Requisite Machine Learning using Python

Anti-Requisite -

Co-Requisite -

COURSE DESCRIPTION

This course provides a detailed discussion and hands-on experience on the fundamentals of deep learning, neural network architectures, convolutional and recurrent models, generative deep learning techniques, and advanced optimization methods. It covers mathematical foundations, implementation using modern frameworks, and applications in computer vision, natural language processing, and other AI domains.

COURSE OUTCOMES (COs)

CO1. Differentiate deep learning from other machine learning paradigms and explain its capabilities and relevance in AI.

CO2. Apply various learning models, optimization techniques, and statistical learning theories in neural networks.

CO3. Implement mathematical operations essential for building and training deep learning models.

CO4. Design, train, and evaluate deep learning models such as CNNs, RNNs, LSTMs, and GRUs for real-world problems.

CO5. Explore and implement generative models including GANs, VAEs, and Neural Style Transfer for creative AI applications.

CO6. Develop intelligent solutions to solve societal problems related to computer vision, healthcare, information security, and other emerging areas.

COURSE CONTENT

Module 1: Fundamentals of Deep Learning (09 Periods)

AI vs ML vs DL, Deep learning capabilities, Special features and relevance of deep learning, Other AI approaches, Applications of deep learning in various domains.

Module 2: Learning Models and Optimization in Neural Networks (09 Periods)

Supervised, unsupervised, and memory-based learning, Hebbian, competitive, error-correction, and Boltzmann learning, Learning tasks: pattern recognition, function approximation, control, Statistical learning theory, PAC model, Perceptron, MLP, Backpropagation, XOR problem, Optimization techniques: LMS, regularization, RBF networks, simulated annealing, Boltzmann machines.

Module 3: Mathematics Behind Neural Networks (09 Periods)

Neural network structure, Tensor operations, broadcasting, scalar products, Gradient computation, morphing tensor shapes, Programmatic representation of deep learning mathematical constructs.

Module 4: Deep Learning Architectures (10 Periods)

Loss functions, optimizers, activation functions, Data preparation and validation (K-fold approach), CNNs: Convolution principles, visualization, data augmentation, feature extraction, RNNs: LSTM, GRU, Bi-LSTM, backpropagation through time, overfitting prevention.

Module 5: Generative and Advanced Deep Learning (08 Periods)

LSTM-based text synthesis, Neural Style Transfer, VAEs, GANs, MIMO deep learning, auto-encoders, Hyperparameter tuning and optimization approaches, Ensemble learning techniques: bagging, boosting, stacking, Applications in real-world AI problems.

Total Periods: 45

EXPERIENTIAL LEARNING LIST OF EXERCISES

1. Introduction to Python deep learning libraries (TensorFlow, Keras, PyTorch).
2. Implement a simple perceptron for binary classification.
3. Build and train a Multilayer Perceptron for the XOR problem.
4. Implement a CNN for image classification (MNIST/CIFAR-10 dataset).
5. Apply data augmentation and evaluate its effect on CNN performance.
6. Implement an RNN for text generation using LSTM.
7. Perform Neural Style Transfer on a given set of images.
8. Implement a Variational Autoencoder (VAE) for image generation.
9. Implement and train a simple GAN to generate handwritten digits.
10. Apply transfer learning using a pretrained CNN for a custom dataset.

COURSE DESCRIPTION: Concepts of Natural Language Processing; NLP Approaches; Corpus; Empirical Approaches; Parsing; Word sense disambiguation; Speech Recognition Technology; Information Retrieval in NLP; Emerging Applications of NLG in Information Visualization, Education, and Health Care	
COURSE OUTCOMES: After successful completion of the course, students will be able to:	
CO1.	Demonstrate knowledge of fundamental concepts in Natural Language Processing (NLP), including classical, empirical, and statistical approaches.
CO2.	Understand corpus linguistics, text annotations, and various machine learning techniques for NLP applications.
CO3.	Apply parsing techniques, word sense disambiguation methods, and speech recognition models to process natural language data effectively.
CO4.	Analyze NLP-based solutions for information retrieval, text summarization, question-answering systems, and ontology-based classifications.
CO5.	Evaluate emerging NLP applications in information visualization, education, and healthcare, focusing on sentiment analysis, document generation, and automated reasoning.

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT:

MODULE 1: Classical Approaches of NLP

(9 Periods)

Introduction, Classical approaches to natural language processing, Understanding linguistics, Levels, Example: Automatic summarization using NLP, Drawbacks, Text processing, Text analysis vs. Text mining vs. Text analytics, Tools and methodologies, Text classification, Text extraction, Text analysis: Scope, Importance, Working principles. Text extraction, Analysis in text extraction, Evaluation of text extraction process, Text analysis APIs. Lexical analysis, Pre-processing activity, POS tagging, Syntactic parsing, Types of parsing, Derivation logic, Grammar, Semantic analysis, Semantic analysis elements, Representation in semantic analysis, Natural language generation, NLP vs NLG, History of NLG, Working principle of natural language generation, Limitations in natural language generation.

MODULE 2: Empirical Approaches

(9 Periods)

Corpus: Corpus creation, Corpus linguistics, Types of corpora, Lexico graphical implementations in corpora, Timeline of corpus linguistics, Usage areas of corpora, Annotations in text corpus, NLP task-specific training corpora. Data sets used for NLP, applications areas of text annotations, Usage, types. Annotations in machine learning, model creation, Training and testing the algorithms, Result evaluation, Revision of the model, Tree banks and its construction: Need for tree bank, Types. Fundamental statistical techniques, Problems of the traditional approach and how statistics helps, Hidden Markov model, Maximum entropy Markov model, Conditional random field model, Support vector machine, N-GRAM, Genetic algorithm, Word sense disambiguation, POS tag and Tagsets, Types of POS taggers. Low-Resource NLP & Multilingual Processing.

MODULE 3: Statistical Approaches

(9 Periods)

Parsing, Statistical parsing, Approaches to parsing, lexicalized statistical parsing. Multiword expressions: Features, Types, Multi word verbs, Word similarity and text similarity, Text similarity methods, Pre-trained sentence encoders, Bidirectional Encoder Representations from Transformers (BERT) with cosine distance, Word sense disambiguation, Methods in WSD, Evaluation of WSD, History and working principle of speech recognition technology, Major leaders in speech recognition and voice assistant. Machine translation, Approaches to machine translation, working principle of SMT, Challenges with statistical machine translation.

MODULE 4: Applications of Natural Language Processing

(9 Periods)

Information retrieval in NLP, IR development, Model types, Problems with NLP in information retrieval, IR evaluation metrics, Design features of IR systems, Question answering systems, QA system architecture, QA system types, Information retrieval or information extraction based QA systems, Restricted domain question answering, Rule based question answering systems, Information extraction applications, Chunking, Representing chunks: Tags vs trees, Text report specifications, Features of reports, Report generation process, Usage of NLP text in report generation, Ontology classifications and process, Why ontology and its advantages, Ontology components, Levels of formality, Ontology construction approaches. Real-Time NLP & Edge AI for NLP.

MODULE 5: Emerging Applications of NLG in Information Visualization, Education, and Health Care

(9 Periods)

Multimedia presentation generation, Text generation: Meaning representation, Text generation: Document structure design, Text generation: Linguistic style control, Document layout, Layout style and wording representation, Image style and meaning representation, Image and wording usage, Scripted dialogue, Language interfaces for intelligent tutoring systems, CIRCSIM-Tutor: Architecture, data presentation and process cycle, AUTOTUTOR: architecture and process, ATLAS Andes: system architecture and design, Pedagogical considerations in Andes, Argumentation for healthcare consumers, CDS architecture and processing, NLP for CDS scope, NLP models, Building blocks of NLP - CDS, Data based evidence collection: Summarization, Applications of NLP in healthcare, Sentiment analysis and subjectivity, Difficulties in sentiment analysis, Document level sentiment classification, Sentence level sentiment classification, Lexicon, Feature-based sentiment analysis, Opinion summarization.

Total Periods: 45

EXPERIENTIAL LEARNING

CASE STUDY 1: Text Summarization Tool

Description:

Create a tool to generate a concise summary of input text using extractive or abstractive techniques.

How to Develop:

Use libraries like NLTK or spaCy for tokenization and sentence scoring. For abstractive summarization, experiment with pre-trained transformer models like BART or T5.

DRYTip: Modularize text preprocessing (e.g., tokenization, stopwords removal) for reuse across similar tasks.

CASE STUDY 2: Sentiment Analysis Application

Description:

Build a program to classify text as positive, negative, or neutral.

How to Develop:

Use TextBlob or VADER for sentiment scoring. Train a custom model using datasets like IMDb reviews.

DRYTip:

Create reusable functions for data loading, preprocessing, and prediction.

CASE STUDY 3: Chatbot with NLP

Description:

Develop a chatbot that can handle conversational inputs and give meaningful replies.

How to Develop:

Use libraries like Rasa or Dialogflow. Combine rule-based and machine-learning-based approaches for better accuracy.

DRYTip:

Store reusable intents and responses in configuration files for flexibility.

CASE STUDY 4: Named Entity Recognition (NER)

Description:

Identify entities like names, locations, and organizations from text.

How to Develop:

Use spaCy's built-in NER pipeline. Annotate custom datasets if default entities don't meet your needs.

DRYTip: Use pre-trained models to avoid redundant training for common entities.

CASE STUDY 5: Keyword Extraction Tool

Description:

Extract the most relevant keywords from a given text.

How to Develop:

Use TF-IDF or algorithms like RAKE. Refine results with stemming or lemmatization.

DRYTip: Write a common utility for text vectorization to reuse in other NLP tasks.

CASE STUDY 6: Text Classification System

Description: Categorize text into predefined classes (e.g., spam vs. ham).

How to Develop:

Use Naive Bayes, Logistic Regression, or transformers like BERT for classification. Train with labeled datasets like SMS Spam Collection.

DRYTip: Maintain a shared preprocessing pipeline for multiple datasets.

CASE STUDY 7: Language Translator

Description:

Translate text from one language to another.

How to Develop:

Use APIs like Google Translate or train sequence-to-sequence models with datasets like EuroParl.

DRYTip: Centralize API interaction code to make integration with different languages consistent.

CASE STUDY 8: Spell Checker

Description:

Build a program to detect and correct spelling errors in text.

How to Develop:

Use libraries like SymSpell or pyspellchecker. Train custom language models if required

**APPLICATION OF MACHINE
LEARNING IN INDUSTRIES**

3 - - - 3

Pre-Requisite Machine Learning

Anti-Requisite -

Co-Requisite -

COURSE DESCRIPTION: Machine Learning for security is the study of Machine learning algorithms and considerations; Anomaly detection methods; Algorithms; Malware Analysis; Feature Engineering; Network defense; Protection; Adversarial Machine learning.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

CO1.Analyze methods of Security, Attack and Mitigation.

CO2.Develop algorithms for adversary and vulnerability analysis.

CO3.Apply algorithms for adversary and vulnerability analysis.

CO4.Select and Apply methods of machine learning to estimate the vulnerability.

CO5.Recognize/identify the potential of machine learning in security breach discovery.

CO-PO-PSO Mapping Table:

Course Outcomes	Program Outcomes												Program Specific Outcomes

2: Medium;

1: Low

COURSE CONTENT

Module1 MACHINE LEARNING AND SECURITY

(09 Periods)

Cyber Threat Landscape, Adversaries in Machine Learning, Machine Learning Problems and Approaches.

Algorithms and Considerations: Training Algorithms, Classification Algorithms, Practical Considerations in Classification, Clustering

Module2 ANOMALIES

(09 Periods)

Detection: Anomaly Detection–Methods–Intrusion Detection–Host Intrusion Detection, Network Intrusion Detection, Web Application Intrusion Detection. Algorithms and Considerations: Anomaly Detection with Data and Algorithms–Forecasting, Statistical Measures, Unsupervised Machine Learning Algorithms; Challenges of using Machine Learning in Anomaly Detection, Response and Mitigation, Practical System Design Concerns.

Module3 MALWARE

(10 Periods)

Malware Analysis: Definition, Background and Classification of Malwares – Feature Generation.

Feature Engineering: Feature Classification, Sampling and Labelling Malware.

Module4 NETWORK TRAFFIC ANALYSIS

(08 Periods)

Deliberation: Overview, Strips: More Realistic Strips Example, Revisiting the Closed-Network Defense: Machine Learning and Network Security, Intrusion Detection, Access Control and Authentication–Detecting “In-Network Attackers”– Data Centric Security, Honeypots, Bot nets.

Algorithms and Considerations: Building a Predictive Model to Classify Network Attacks–Preparing, Exploring and Classification of Network Data.

Module5 PROTECTION AND ADVERSARIES

(09 Periods)

Protection: Protecting Consumer Web – Types of Abuse - Supervised Learning for Abuse Problems–Collecting and Labelling Data.

Adversarial Machine Learning: Importance, Vulnerabilities, Model Poisoning, Evasion Attack.

Total Periods: 45

EXPERIENTIAL LEARNING

1. The probability that it is Friday and that a student is absent is 3 %. Since there are 5 school days in a week, the probability that it is Friday is 20 %. What is the probability that a student is absent given that today is Friday? Apply Bayes' rule in python to get the result. (Ans: 15%)
2. Extract the data from database using python
3. Implement k-nearest neighbors classification using python
(It's an indicative one. The Course Instructor may change the activities and the same shall be reflected in Course Handout)

Course Code	Course Title	L	T	P	S	C
22AI102105	Pattern Recognition & Anomaly Detection	3	-	-	-	3
Pre-Requisite	-					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION:

his course introduces the principles and techniques of Pattern Recognition and Anomaly Detection, focusing on data preprocessing, feature extraction, and dimensionality reduction. Students will learn to implement and analyze methods such as Principal Component Analysis, classification, clustering, and outlier detection. Emphasis is placed on applying these techniques to real-world datasets to uncover patterns and detect unusual behavior. Practical lab work and projects will develop both theoretical understanding and hands-on skills in modern data analysis.

COURSE OUTCOMES: At the end of the course, student will be able to:

- CO1:** Understand fundamental concepts, mathematical foundations, and real-world applications of Pattern Recognition and Anomaly Detection techniques.
- CO2:** Preprocess and prepare datasets by handling missing values, scaling, encoding categorical variables, and selecting relevant features for analysis.
- CO3:** Implement dimensionality reduction techniques such as Principal Component Analysis (PCA) and interpret explained variance for feature selection.
- CO4:** Apply pattern recognition algorithms (e.g., classification, clustering) and anomaly detection methods (e.g., statistical, distance-based, density-based) to identify patterns and outliers in data.
- CO5:** Evaluate and compare the performance of different models on original, PCA-transformed, and anomaly-filtered datasets, interpreting results to make data-driven decisions.

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

MODULE 1: Pattern and Anomaly Detection Introduction (09 Periods)

What is pattern? What is pattern recognition? Pattern recognition techniques, Training and learning in pattern recognition, Pattern recognition applications, Pattern recognition use cases, what is anomaly detection? What are some other practical uses for anomaly detection? How is anomaly detection calculated over time? Key point for AI and ML-anomaly detection, Tasks for artificial intelligence, AI system learning process, Test to geometric requirements for curves algebraic, Curves matched to data points, Case study: Anomaly detection with IBM Watson, Probability theory, Maximum likelihood theory and estimation, Model selection, Matrices of uncertainty (confusion matrices), Loss of logging (log-loss), Rate for F1 (F1 score), Metric selection, Hyperparameter selection, The problem with high dimensionality, Information theory.

MODULE 2: Statistical Approaches for Pattern Recognition (09 Periods)

Understanding statistics, T-test, Z-test, Z-test and t-test difference, P-value, Descriptive statistics, Type I error, Type II error, Differences between type I and type II errors, Null hypothesis, Statistical significance, Hypothesis testing, Four steps of hypothesis testing, Real-world example of hypothesis testing, Bonferroni test, Check of one-tailed, Probability distributions, Types of distributions, Regression models, Types of regression, How to select the best model for regression? Common questions, Linear models for classification, Example of positive linear regression.

MODULE 3: Machine Learning Approaches for Pattern Recognition (09 Periods)

Neural networks, how neural networks learn? Neural networks examples, Neural networks use cases, Kernel methods, Sparse kernel machines use cases, Graphical models, Mixture models and EM, Bayesian networks: Directed graphical models, Conditional probability distributions, Potential functions, Conditional independences, Sampling methods for pattern recognition, Continuous latent variables, Combining models for pattern recognition, Markov chain Monte Carlo, The K-means algorithm, Applications of K-means.

MODULE 4: Anomaly Detection & Anomaly Detection Approaches (09 Periods)

What are anomalies? Applications of anomaly detection, Related use cases, Types of input data, Types of anomalies, Evaluation of an anomaly detector, Taxonomy of approaches, Classification based, Classification use cases, Supervised classification techniques, Nearest neighbour based techniques, Others model techniques, Information theory, Contextual anomaly based, Collective anomaly detection, On-line based model, Distributed anomaly detection, IDS analysis strategy.

MODULE 5: Real-world problems (09 Periods)

Network intrusion detection, Understanding of IDS core operation, How an IDS works? Types of intrusion detection systems, Fundamental concerns of intrusion detection systems, Intrusion detection vs. intrusion prevention, The future of IDS, Anomaly detection in big data, Key attributes of advanced anomaly detection, The real-world impact of anomaly detection, Anomaly detection on 5G: Possibilities and opportunities, Real time anomaly detection in docker, Hadoop cluster, Anomaly detection in IoT, Detection of deviations in deep learning time series results, Anomaly detection use cases, Anomaly detection with time series forecasting, What is time series analysis?

Time series data models, how to find anomaly in time series data? Anomaly detection using machine learning, Anomaly detection using deep learning, Anomaly detection for an e-commerce pricing system, IBM's Watson AIOps automates IT anomaly detection and remediation.

Total Periods: 45

EXPERIENTIAL LEARNING RESOURCES

1. Implement handwritten digit classification using **k-Nearest Neighbors (k-NN)** on the MNIST dataset.
2. Perform **face recognition** using **Principal Component Analysis (Eigenfaces)**.
3. Classify the **Iris dataset** using **Bayesian Decision Theory**.
4. Implement **text document classification** (e.g., spam detection) using **Naive Bayes**.
5. Apply **k-Means clustering** for image segmentation based on pixel colors.
6. Detect fraudulent transactions using **Isolation Forest** on a credit card dataset.
7. Implement **network intrusion detection** using **Local Outlier Factor (LOF)**.
8. Perform anomaly detection in **sensor time-series data** using **One-Class SVM**.
9. Detect anomalies using a **deep learning Autoencoder** on tabular or image data.
10. Implement **real-time anomaly detection** in video streams using motion features.

1. *Richard O. Duda, Peter E. Hart, David G. Stork*, A foundational text in statistical pattern recognition and classification, **2nd Edition**.
2. *Pavel Filonov, Alexey Lavrentyev, Andrey Gritsenko*, **Anomaly Detection principles and Algorithms**: Detailed methods for statistical, distance-based, and machine-learning-based anomaly detection.

22EC101701	AI IN HEALTHCARE	3	-	-	-	3
Pre-Requisite	-					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION: This course provides a detailed discussion on Concepts of Artificial Intelligence(AI) in Healthcare; The Present State and Future of AI in Healthcare Specialties; The Role of Major Corporation sin AI inHealthcare;ApplicationsofAI in Healthcare.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1** Understand the fundamental concepts of AI in Healthcare sector.
- CO2** Analyse the present state and future of AI in Healthcare specialties for different scenarios.
- CO3** Apply design concepts and metrics for AI in Healthcare.
- CO4** Demonstrate basic concepts and terminologies of future applications of Health care in AI.
- CO5** Develop AI applications through AI techniques for healthcare

COURSE CONTENT

Module1: INTRODUCTION TO ARTIFICIAL INTELLIGENCE IN HEALTHCARE (08 Periods)

Introduction to AI in Healthcare, Benefits & Risks, AI in the health sector, AI versus human intelligence, The future of AI in health sector, AI & Neural networks.

Module2: THE PRESENT STATE & FUTURE OF AI IN HEALTHCARE SPECIALTIES (10 Periods)

Artificial Intelligence in: preventive healthcare, Radiology, Pathology, Surgery, Anesthesiology, Psychiatry, Cardiology, Pharmacy, Dermatology, Dentistry, Orthopedics, Ophthalmology.

Module3: THE ROLE OF MAJOR CORPORATIONS IN AI IN HEALTHCARE (08 Periods)

IBM Watson, The role of Google & Deep mind in AI in Healthcare, Baidu, Facebook & AI in Healthcare, Microsoft & AI in Healthcare.

Module4: FUTURE OF HEALTHCARE IN AI (10 Periods)

Evidence-based medicine, personalized medicine, Connected medicine, Virtual Assistants, Remote Monitoring, Medication Adherence, Accessible Diagnostic Tests, Smart Implantables, Digital Health and Therapeutics, Incentivized Wellness, Blockchain, Robots, Robot-Assisted Surgery, Exoskeletons, Inpatient Care, Companions, Drones, Smart Places, Smart Homes, Smart Hospitals.

Module5: APPLICATIONS OF AI IN HEALTHCARE (09 Periods)

Case Study1: AI for Imaging of Diabetic Foot Concerns and Prioritization of Referral for Improvements in Morbidity and Mortality.

Case Study2: Outcomes of a Digitally Delivered, Low-Carbohydrate, Type 2 Diabetes Self-Management.

Case Study3: Delivering A Scalable and Engaging Digital Therapy.

Case Study4: Improving Learning Outcomes for Junior Doctors through the Novel Use of Augmented and Virtual Reality for Epilepsy.

Case Study5: Big Data, Big Impact, Big Ethics: Diagnosing Disease Risk from Patient Data.

Total Periods:45

EXPERIENTIAL LEARNING

1. Analyze how the artificial intelligence is used to predict the disease result and Prognosis Assessment of a patient.
2. How does drug discovery happen and how does AI is helping in drug discovery and Labs.
3. Justify that artificial intelligence provide engineering solutions for early detection and Diagnosis of diseases.
4. Demonstrate the prediction of bladder volume of a patient.

(Note: It's an indicative one. Course Instructor may change activities and shall be reflected in course Handout)

COURSE CONTENT

Module1: INTRODUCTION TO BANKING

(09 Periods)

Meaning-Importanceofbanking-Functions ofbanking-ReserveBankofIndia: Functions– RoleofRBI in sustainabledevelopment.

Module2: BANK-CUSTOMER RELATIONSHIP

(09 Periods)

Debtor-creditor relationship, deposit products or services, payment,and collection of cheques. Accounts–Types of accounts,the procedure for opening and closing an

B.Tech.ComputerScienceandEngineering(AIandML)

account-Loans and Advances-principles of lending.

Module3 ELECTRONIC PAYMENT SYSTEM&BUSINESS MODELS (09 Periods)

Introduction to Online Banking- types of e-payment system,e-cash,NEFT,RTGS,Credit cards,Electronic Wallet and Debit cards. **Business models**-B2B,B2C,C2C,and B2G.

Module4 INTRODUCTION TO RISK AND INSURANCE (09 Periods)

Insurance:Definition,Insurance a riskmitigation mechanism,elements of insurance. Concept of risk,riskVs uncertainty.

Module5 INSURANCE OVERVIEW (09Periods)

Principles of insurance-insurance types-LIC&GIC-insurance functions, IRDA- Insurance Players in India.

Total Periods:45

EXPERIENTIAL LEARNING

- 1.Make a Power Point presentation on the banking system in India.
- 2.Submit a report on the working of insurance companies.
- 3.Prepare a report on the functions of RBI&IRDA in India.
- 4.Submit a report on electronic banking facilities provided by Indian banks.

(Note:It's an indicative one.The course instructor may change the activities and the same shall be reflected in course handout.)

COURSE DESCRIPTION: This course focus on Biological Data Acquisition, Databases, Data Processing, Methods of Analysis, Applications of Bio-informatics.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1** Understand basic biological data acquisition in bio informatics.
- CO2** Identify the proper databases for the information search by choosing the biological databases and also submission and retrieval of data from databases.
- CO3** Analyze the results of bioinformatics data using text and sequence-based searching techniques.
- CO4** Analyze the secondary and tertiary structures of proteins by applying different alignment programs
- CO5** Design biological databases by using contextual knowledge on bioinformatics.

COURSE CONTENT

Module1: BIOLOGICAL DATA ACQUISITION

(09 Periods)

Biological information, Retrieval methods for DNA sequence, protein sequence and protein structure information

Module2: DATABASES

(09 Periods)

Format and Annotation: Conventions for database indexing and specification of search terms, Common sequence file formats. Annotated sequence databases - primary and secondary sequence databases, protein sequence and structure databases.

Module3: DATA PROCESSING**(09 Periods)**

Data–Access, Retrieval and Submission: Standard search engines; Data retrieval tools–Entrez, DBGET and SRS; Submission of (new and revised) data; Sequence Similarity Searches: Local and global. Distance metrics. Similarity and homology. Scoring matrices, PAM and BLOSUM

Module4: METHODS OF ANALYSIS**(09 Periods)**

Dynamic programming algorithms, Needleman-Wunsch and Smith-Waterman. Heuristic Methods of sequence alignment, FASTA and BLAST; Multiple Sequence Alignment and software tools for pairwise and multiple sequence alignment, CLUSTAL program, Prediction of Tertiary structure of proteins.

Module5: APPLICATIONS**(09 Periods)**

Genome Annotation and Gene Prediction; ORF finding; Phylogenetic Analysis, Genomics, Proteomics, Genome analysis–Genome annotation, DNA Microarray, computer aided drug design (CADD).

Total Periods:45**EXPERIENTIAL LEARNING**

1. Calculate the dynamic programming matrix and one or more optimal alignment(s) for the sequences GAATTC and GATTA, scoring +2 for a match, -1 for a mismatch and With a linear gap penalty of $d=2$.
2. Determine whether the RNA string GGACCACCAGG should be folded into two substructures.
3. Discuss how to carry out the multiple sequence alignment of the following three sequences: TTTTAAAA, AAAACCCC, CCCCTTTT.

(Note: It's an indicative one. The course instructor may change the activities and the same shall be reflected in course handout.)

COURSE CONTENT

Module1: LIVING ORGANISMS

(09 Periods)

Comparison of biological organisms with man made systems, Classification of living organisms, Cellular basis of life, differences between prokaryotes and eukaryotes, classification on the basis of carbon and energy sources, molecular taxonomy

Module2: PROTEINS, NUCLEIC ACIDS AND ENZYMES

(10 periods)

Biomolecules, structure, function and Classification of proteins, structure, function and Classification of Nucleic acids, Enzymes, Enzyme nomenclature, Classification of Enzymes and Mechanism of Enzyme action, Industrial applications of enzymes, Fermentation and its industrial applications

Module3 GENETICS AND MOLECULAR BIOLOGY (11 Periods)

Mendel's laws, single gene disorders in humans, Genetic code, DNA replication, Transcription, Translation.

Module4 RECOMBINANT DNA TECHNOLOGY (08 Periods)

Recombinant DNA Technology: recombinant vaccines, transgenic microbes, plants and animals, animal cloning, biosensors, biochips.

Module5 HUMAN PHYSIOLOGY AND APPLIED BIOLOGY (07 Periods)

Fundamentals of Human physiology, neurons, synaptic and neuromuscular junctions, Introduction to EEG, DNA finger printing, DNA Micro array and Genomics.

Total Periods: 45

EXPERIENTIAL LEARNING

1. Identify the Cell and Cellular organelle spotters and write the functions of spotters identified
2. Prepare a table of Enzymes and their importance.
3. Assignments on Central dogma of Molecular biology
4. Identify different organs in the organ system diagrams.
5. Assignments on photosynthesis.
6. Quiz related to organ system and functions.

(Note: It's an indicative one. The course instructor may change the activities and the same shall be reflected in course handout.)

22LG101701

Course Title
BUSINESS COMMUNICATION AND
CAREER SKILLS

L T P S C
3 - - - 3

Pre-Requisite

Anti-Requisite -

Co-Requisite -

COURSE DESCRIPTION: Nature and Scope of Communication, Corporate Communication, Writing Business Messages & Documents, Careers & Résumés, and Interviews.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Demonstrate knowledge of professional communication by analyzing and applying the styles and strategies of business communication in Communication Networks, Interpersonal, and Informal communication.
- CO2.** Analyze the limitations of communication by applying and demonstrating corporate and cross-cultural communication strategies effectively in a business context and Crisis Management situations.
- CO3.** Apply appropriate strategies and techniques in writing business messages, business letters, and résumé for effective professional communication and career building.
- CO4.** Demonstrate appropriate communication techniques and answering strategies by analyzing the expectations during presentations and interviews.

CO-PO Mapping Table

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	1	-	-	2	-	-	-	-	3	-	-
CO2	1	2	-	-	2	-	-	-	-	3	1	-
CO3	1	-	-	-	2	-	-	-	-	3	-	-
CO4	1	2	-	-	2	-	-	-	-	3	-	-
Course Correlation Mapping	2	2	-	-	2	-	-	-	-	3	1	-

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module1: NATURE AND SCOPE OF COMMUNICATION

(09 Periods)

Introduction–Communication Basics–Functions of Communication–Communication Networks–Inter personal Communication–Informal Communication–Communication Barriers–Roles of a Manager.

Module2: CORPORATE COMMUNICATION

(09 Periods)

Introduction–Corporate Communication–Cross-Cultural Communication; Concept & Styles–Corporate Communication Strategy–Corporate Citizenship –Crisis

Communication:Case Study.

Module3: WRITING BUSINESS MESSAGES & DOCUMENTS

(09 Periods)

Introduction–Importance of Written Business Communication –Types of Business Messages–Five Main Stages of Writing Business Messages–Business Letter Writing–Kinds of Business Letters–Common Components of Business Letters–Strategies for Writing the Body of a Letter.

Module4: CAREERS AND RÉSUMÉS

(09 Periods)

Introduction–Career Building–Résumé Formats:Traditional, Electronic and Video Résumé–Sending Résumés–Follow-up Letters–Business Presentations and Speeches: Planning–Structuring–Organizing–Delivery.

Module5: INTERVIEWS

(09 Periods)

Introduction–General Preparation for an Interview–Success in an Interview– Important Non-verbal Aspects–Types of Interviews–Styles of Interviewing–Types of Interviewing– Online Recruitment Process.

Total Periods:45

EXPERIENTIAL LEARNING

1. People often get confused in identifying or using English vocabulary on most occasions. Prepare a list of confusing words and find methods to overcome the difficulties in using those words to uplift the career of professionals.
2. Organizations and institutions use modern technology in communicating with their colleagues, clients, and stakeholders. Make a Power Point presentation on the modern communication system of any organization and its role in the success of the organization and its career.
3. As a student in the modern technological world, organizing or attending webinars is inevitable. Analyze the pros and cons of video conferencing by organizing webinars and preparing a report.
4. Formate a mandactasa team leader. Prepare a performance appraisal report of the team using visualaidsto support the presentation.
5. Make a detailed study on social networking and its impact on modern business and Career.

(Note:It's an indicative one.The course instructor may change the activities and the same shall be reflected in course handout.)

UNIVERSITY ELECTIVE

Course Code	Course Title	L	T	P	S	C
22CE101701	CIVIL ENGINEERING AND THE SOCIETY	3	-	-	-	3
Pre-Requisite	-					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION: This course provides a detailed discussion on introduction to civil engineering, aesthetics of historical and modern civil engineering structures, unpredictable nature and the civil engineering; civil engineering solutions for the problems of traffic, pollution, water and waste management; building sustainable smart cities.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Analyze principles of civil engineering to basic civil engineering problems following ethics and latest developments considering society, environment and sustainability besides communicating effectively in graphical form.
- CO2.** Analyze aesthetics of historical and modern civil engineering structures to solve complex civil engineering problems using tools and techniques by following ethics and latest trends considering society, environment and sustainability besides communicating effectively in graphical form.
- CO3.** Analyze unpredictable nature and the role of civil engineering to solve complex civil engineering problems using tools and techniques by following ethics and considering society, environment and sustainability besides communicating effectively in graphical form.
- CO4.** Analyze civil engineering solutions for the problems of traffic, pollution, water and waste management to solve complex problems using appropriate tools and techniques following relevant standards considering society, health, safety, environment, economics and management besides communicating effectively in Graphical form.
- CO5.** Analyze the building principles of sustainable smart cities to solve complex problems using appropriate tools and techniques following relevant standards considering society, health, safety, environment, economics and management besides communicating effectively in graphical form.

CO5	3	3	-	1	2	2	2	2	-	1	2	-
Course Correlation Mapping	3	3	-	1	2	2	2	2	-	1	2	1

Correlation Levels: 3:High; 2: Medium; 1:Low

COURSE CONTENT

Module1: INTRODUCTION TO CIVIL ENGINEERING (07 Periods)

Philosophy of civil engineering, Disciplines of civil engineering, Evolution of construction and civil engineering in the world; Civil engineer-Duties and responsibilities, Role of Civil engineer in the society; Civil engineering materials and their applications, Latest advancements in civil engineering.

Module2: AESTHETICS OF HISTORIC AND MODERN CIVIL ENGINEERING STRUCTURES (09 Periods)

Aesthetics in civil engineering structures; Aesthetic principles and techniques-Analysis of materials, textures and colors in aesthetic design, Integration of aesthetics with structural engineering principles; Historic civil engineering structures-Case studies of iconic historic structures (e.g. Colosseum, Taj Mahal, Eiffel Tower); Modern civil engineering structures-Exploration of contemporary iconic structures (e.g. Burj Khalifa, Sydney Opera House, Golden Gate Bridge); Integration of aesthetics and functionality- Ethical considerations in balancing aesthetics, functionality and sustainability; Future trends in aesthetic engineering.

Module3 UNPREDICTABLE NATURE AND THE CIVIL ENGINEERING (09 Periods)

Unpredictable nature, Examples of unpredictable natural disasters- Earth quakes, Floods, Land slides, Hurricanes, Tsunamis, Impacts of unpredictable natural events on infrastructure; Role of civil engineering; Resilience in civil engineering-Strategies for building resilient structures, Risk assessment and analysis, Incorporating safety factors, Using robust construction materials, Implementing redundancy and backup systems, Sustainable design practices; Case studies of successful resilient designs.

Module4 CIVIL ENGINEERING SOLUTIONS FOR THE PROBLEMS OF TRAFFIC, POLLUTION, WATER AND WASTE MANAGEMENT (11 Periods)

Introduction to urban challenges and sustainable development; Traffic management solutions-Causes and impacts of traffic congestion, Intelligent transportation systems; Pollution control and environmental engineering, Sources and types of urban pollution, Air quality monitoring and control strategies, Water pollution control, Noise pollution management, Sustainable construction practices to reduce pollution; Water resource management, Water demand and supply management in urban areas, Rainwater harvesting techniques, Water conservation and waste water treatment technologies; Waste management strategies, Solid waste generation and disposal challenges, Waste-to-energy conversion technologies, Case studies of successful waste management initiatives; Integration and synergies among Solutions, Multi-disciplinary approach for holistic solutions.

Module5 BUILDING SUSTAINABLE SMART CITIES (09 Periods)

Smart city; Elements of smart city infrastructure-Buildings, Mobility, Energy, Water, Waste management, Health and digital layers; Need for an integrated approach; Role of science, technology and innovation in the implementation of smart infrastructure; Smart infrastructure design principles and policies; Case studies: Gujarat International Finance Tech-City in India.

Total Periods: 45

EXPERIENTIAL LEARNING

1. Group discussion on compatibility of modern construction materials compared to that of traditional civil engineering materials
2. Poster presentation on historic and modern civil engineering structures.

3. Submit a case study report on Life Cycle Analysis (LCA) of any one of the historic civil engineering structures.
4. Submit a case study report on the theme of severity of the natural disasters on the Civil engineering structures.
5. Debate on challenges, limitations and solutions for design and implementation of smart city.

(Note: It's an indicative one. The course instructor may change the activities and the same shall be reflected in course handout.)

UNIVERSITY ELECTIVE

Course Code	Course Title	L	T	P	S	C
22SS101701	CONSTITUTION OF INDIA	3	-	-	-	3
Pre-Requisite	-					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION: This course provides an in-depth knowledge about Constitution of India's Preamble and its Philosophy; Union Legislature; Federalism in India; Judiciary and Public Services; Nation Building. The students can gain first-hand information and knowledge about these dynamics and accordingly act based on these sources in their professional and routine activities.

COURSE OUTCOMES: After successful completion of this course, the students will be able to:

CO1: Demonstrate knowledge in the Parliamentary proceedings, Election Commission, Public Services and Foreign Policy of India.

CO2: Apply the reasoning informed by the various aspects of the Constitution and its provisions to assess societal issues and the consequent responsibilities relevant to The professional engineering practice.

CO-PO Mapping Table

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CO2	2	-	-	-	-	3	-	3	-	-	-	-
Course Correlation Mapping	2	-	-	-	-	3	2	3	-	-	-	-

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module1: PREAMBLE AND ITS PHILOSOPHY

(09 Periods)

Introduction to Indian Constitution; Evolution of Indian Constitution; preamble and its philosophy

Module2: UNION LEGISLATURE

(09 Periods)

The Parliament, Parliamentary Structure, Process of Legislation; President of India- Powers and Functions; Prime Minister and Council of Ministers; Constitution Amendment Procedure.

Module3: FEDERALISM IN INDIA

(09 Periods)

Centre-State Administrative Relationship; Governors- Powers and Functions; State Legislature - Composition and powers; Chief Ministers- Powers and Functions; The Election Commission- Powers and Functions.

Module4: JUDICIARY AND PUBLIC SERVICES**(09 Periods)**

The Union Judiciary-Supreme Court and High Court;Fundamental Rights and Duties
All India Services-Central Civil Services-State Services-Local Services.

Module5: INTERNATIONAL PARTICIPATION**(09 Periods)**

Foreign Policy of India; International Institutions Influence: UNO,WTO,WHO,SAARC,
International Summits: BRICS,NSS,UNEP-India's Role in International Negotiations;
Environmentalism in India.

Total Periods:45**EXPERIENTIAL LEARNING**

1. Review news papers and submit a report on critical analysis of Indian Civil Servants exercise of powers,in the awake of constitutionally assigned authority.
2. Visit your village Panchayat office or Municipality office and generate a report on your Observations about maintained Constitutional symbolism.
3. Watch few videos on recent Indian Independence Day and Republic Day celebrations as marked in NewDelhi and present a detailed report,by considering the following aspects:
 - a) Comparatively analyze the speeches of the President of India and Prime Minister of India as delivered on these two occasions.
 - b) Compare these two events relevance in terms of Indian Armed Forces presence.
 - c) Observe,compare and analyse 'flagcode'relevance as marked in these two events.
- 4.Watch a few videos on recent ' proceedings' of any state Legislative Assembly session and submit a detailed report.

(Note:It's an indicative one.The course instructor may change the activities and the same shall be reflected in course handout.)

22CM101702	COST ACCOUNTING AND FINANCIAL MANAGEMENT	3	-	-	-	3

Pre-Requisite -

Anti-Requisite -

Co-Requisite -

COURSE DESCRIPTION: Cost accounting; cost sheet & preparation of cost sheet; standard costing & variance analysis; financial management & ratio analysis; introduction to investment.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1** Demonstrate the concepts of Cost Accounting and Management Accounting and the elements of costing.
- CO2** Determine the Cost of Production for pricing decisions.
- CO3** Apply the Standard Costing and Variance techniques for the control of the cost of production
- CO4** Analyze the Profitability and financial condition of an organization using Ratios.
- CO5** Apply Capital Budgeting techniques for making investment decisions in an organization.

COURSE CONTENT

Module1: COST ACCOUNTING

(09 Periods)

Meaning of Cost and Cost Accounting, Objectives, Scope, Advantages, and Disadvantages – Cost Accounting Vs Management Accounting – Elements of Costing – Installation of costing system – Material Control, Labor Control, Overhead Control.

Module2: COST SHEET & PREPARATION OF COST SHEET

(09 Periods)

Analysis of Cost – Preparation of cost sheet, estimate, tender, and quotation (Simple problems) – Importance of Costing while pricing the products

Module3 STANDARD COSTING&VARIANCE ANALYSIS**(09 Periods)**

Introduction to Standard Costing&Variances–Variance Analysis:Material variances, Labor variances (Simple Problems).

Module4 FINANCIAL MANAGEMENT&RATIO ANALYSIS**(09 Periods)**

Meaning, Objectives-NatureandScope,Importance ofFM–Ratio Analysis:Typesof Ratios: SolvencyRatios,LiquidityRatios,TurnoverRatios,andProfitabilityRatios-FinancialStatementAnalysisisthroughRatios(SimpleProblems).

Module5 INTRODUCTIONTO INVESTMENT**(09 Periods)**

Investment-Meaning and Definition- concept of risk and returns-Capital budgeting techniques–Security Analysis and Portfolio Management (Basic concepts).

Total Periods:45**EXPERIENTIAL LEARNING**

1. Prepare a report on the role of cost accountants in the growth of a company.
2. To visit the manufacturing unit to observe how they used various techniques for analyzing the financial health of a company.
3. Prepare a report on factors influencing the form of business organization.
4. Prepare the cost sheet with practical examples of any two manufacturing companies.

(Note:It's an indicative one.The course instructor may change the activities and the same shall be reflected in course handout.)

COURSE CONTENT

Module1: INTRODUCTION TO CYBER CRIMES AND OFFENSES (09 Periods)

Cyber Crimes: Introduction, Definition, Origin, Cyber crime and information security, Cyber criminals, Classifications of cyber crimes, The legal perspectives and Indian perspective, Cyber crime and Indian ITA 2000, Global perspective on cyber crimes.

Cyber Offenses: Introduction, Criminals planning on attacks, Social engineering, Cyber stalking, Cybercafe and crimes, Botnets.

Module2: TOOLS AND METHODS USED IN CYBER CRIME AND PHISHING AND IDENTITY THEFT (09 Periods)

Introduction, Proxy servers and Anonymizers, Phishing, Password cracking, Key loggers and Spywares, Virus, Worms and Ransomware, Trojanhorses and Backdoors, Steganography, DoS and DDoS attacks.

Phishing and Identity Theft: Introduction, Phishing, Identity Theft (ID Theft).

Module3 CYBER CRIMES AND CYBER SECURITY-LEGAL PERSPECTIVES (08 Periods)

Introduction, Cyberlaws in Indian context, The Indian IT act, Challenges to Indian law and Cyber crimes scenario in India, Consequences of not addressing the weakness in IT act, Digital signatures and the Indian IT Act, Cyber Crime and Punishment, Cyberlaw, Technology and Students in India scenario.

Module4 CYBER SECURITY-ORGANIZATION ALIMPLICATIONS (10 Periods)

Introduction, Web threats for organizations—evils and perils, Security and privacy implications from cloud computing, Social Media Marketing—Security risks and Perils for organizations, Social computing and associated challenges for organizations, Protecting people's privacy in organization, Organizational guidelines for internet usage, Safe computing and Usage policy, Incident handling and Best practices.

Module5 CYBER CRIME AND TERRORISM AND ILLUSTRATIONS (09 Periods)

Cyber Crime&Terrorism: Introduction, Intellectual property in the cyberspace, The ethical dimension of cyber crimes, The psychology, Mind set and skills of hackers and cyber criminals, Sociology of cyber criminals, Information warfare.

Cyber Crime Illustrations: Indian banks lose millions of rupees, Justice vs. Justice, Parliament attack, The Indian case of online gambling, Bank and credit card related frauds, Purchasing goods and services scam, Nigerian 419 scam.

Total Periods:45

**ELECTRICAL SAFETY AND SAFETY
MANAGEMENT**

3 -- - 3

Pre-Requisite -

Anti-Requisite -

Co-Requisite -

COURSE DESCRIPTION:

The course deals with the various aspects of potential risk due to electrical shock; safety precautions to be followed while working in hazardous zones; safe practices while handling various electrical equipment and during maintenance; and relevant electrical safety standards and Indian rules and acts.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Understand the Indian electricity rules, regulations and various standards to be maintained for the safety of life and equipment.
- CO2.** Understand the potential effects of electrical shock and safety measures to protect against such risk.
- CO3.** Understand the safety aspects and safe practices to be followed while installing residential, commercial, and agricultural appliances.
- CO4.** Identify various hazardous working zones and take necessary precautionary measures while working in such areas.
- CO5.** Follow safety measures during installation, testing and commissioning, and maintenance of electrical equipment/plant.

COURSE CONTENT

(10 Periods)

Module1: INDIAN ELECTRICITY RULES AND ACTS, AND THEIR SIGNIFICANCE

OSHA standards of electrical safety, Basic electrical safety rules as per OSHA; Objectives and scope of IE acts and IE rules, Ground clearance and Section Clearances, Clearance in transmission and distribution lines, Significance of Equipment Earthing, Earthing of equipment bodies, structures and non-current carrying metallic parts, Earthing of system neutral; Rules regarding first aid and fire fighting facility, Electrical safety general requirements as per IE rules.

**Module2: INTRODUCTION TO ELECTRICAL SAFETY AND
SAFETY MANAGEMENT**

(10Periods)

Electric Safety:Terms and definitions, objectives of safety and security measures, Hazards associated with electric current and voltage, Protection against electrical hazards and types, Effect of current on the human body,Principles of electrical safety and approach to prevent accidents.

Electric shocks and its prevention: Primary and secondary electrical shocks, possibilities of getting an electrical shock and its severity,medical analysis of electric shocks and its effects, shocks due to flash/Sparkover's,prevention of shocks,safety precautions against contact shocks,flash shocks,burns,Safety precautions in LV installations and electric plant.

**Module3: ELECTRICAL SAFETY IN RESIDENTIAL,
COMMERCIAL, AND AGRICULTURAL INSTALLATIONS**

(08 Periods)

Introduction—Wiring and fitting;Domestic appliances—water tap giving a shock,shock from wet wall, fan firing shock; Multi-storied building, Temporary installations, Agricultural pump installation;Do's and Don'ts for safety in the use of domestic electrical appliances;Principles of safety management in electrical plants,safety auditing,and economic aspects.

Module4: ELECTRICAL SAFETY IN HAZARDOUS AREAS

(07 Periods)

Hazardous zones—class 0,1 and 2; Sparks, flash overs and corona discharge in electrical plants;equipment for hazardous locations;scope for live line work, principles of live line maintenance, special tools for live line maintenance, safety instructions for working on HV lines/apparatus.

**Module5: SAFETY DURING INSTALLATION TESTING AND
MAINTENANCE**

(10Periods)

Safety during installations:Preliminary preparations, preconditions for the start of installation work and safe sequence, safety aspects during installations of Transformers and Rotating machines.

Safety during testing:Purpose of commissioning checks and tests,equipment tests, high voltage energization tests, performance and acceptance tests,and safety aspects during commissioning.

Safety during maintenance:Operators' safety,Types of safety maintenance,Safety procedures,safety precautions during maintenance,and planning of maintenance.

Total Periods:45

EXPERIENTIAL LEARNING

1. Study and submit a report on various electrical safety standards followed in a broad countries.
2. Visit a near by industry and submit a report on various safety measures followed in the industry.
3. Study and submit a report on standard practices followed during the maintenance/commissioning of the electrical apparatus in any industry.
4. Collect information about various safety/alert sign boards and the relative measures for a particular situation.
5. Should practice preliminary first aid assistance such as Cardiopulmonary resuscitation(CPR) and shall demonstrate.

(Note:It's an indicative one.The course instructor may change the activities and the same shall be reflected in course handout.)

Course Code	Course Title	L	T	P	S	C
22MG101701	ENTREPRENEURSHIP FOR MICRO, SMALL AND MEDIUM ENTERPRISES	3	-	-	-	3
Pre-Requisite	-					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION: To understand the setting up and management of MSMEs and initiatives of Government and other institutions support for growth and development of MSMEs

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Understand the basic of SME and challenges of MSMEs
- CO2.** Explain the opportunities to Set-Up SSI/SME Units and role of rural&women entrepreneurship.
- CO3.** Illustrate roles of various institutions supporting MSMEs.
- CO4.** Understand Management of MSME,NPA&sickness units
- CO5.** Evaluate role of Government in Promoting Entrepreneurship

CO-PO Mapping Table:

Course Correlation Mapping	2	2	2	2	1	1	2	1	1	-	2	2

Correlation Levels: 3:High; 2: Medium; 1: Low

COURSE CONTENT

Module1: INTRODUCTION 2 (07 Periods)
 Concept&Definition, Role of Business in the modern Indian Economy SMEs in India, Employment and export opportunities in MSMEs. Issues and challenges of MSMEs

Module2: MSME SETTING (09 Periods)
 Identifying the Business opportunity, Business opportunities in various sectors, formalities for setting up an enterprise-Location of Enterprise-steps in setting up an enterprise-Environmental aspects in setting up, Incentives and subsidies.

Module3: MSME SUPPORTING INSTITUTIONS**(09 Periods)**

Forms of Financial support, Long term and Short term financial support, Sources of Financial support, Development Financial Institutions, Investment Institutions, Central level institutions, State level institutions, Other agencies, Commercial Bank–Appraisal of Bank for loans

Module4: MANAGEMENT OF MSME**(10 Periods)**

Management of Product Line; Communication with clients–Credit Monitoring System–Management of NPAs–Restructuring, Revival and Rehabilitation of MSME, Problems of entrepreneurs–sickness in SMI–Reasons and remedies–Evaluating entrepreneurial performance

Module5: ENTREPRENEURSHIP PROMOTION**(10 Periods)**

MSME policy in India, Agencies for Policy Formulation and Implementation: District Industries Centers (DIC), Small Industries Service Institute (SISI), Entrepreneurship Development Institute of India (EDII), National Institute of Entrepreneurship & Small Business Development (NIESBUD), National Entrepreneurship Development Board (NEDB)

Total Periods: 45**EXPERIENTIAL LEARNING**

1. Present a case study on MSMEs Business Strategies.
2. Collect the data about nearby MSMEs and Present their structures in a PPT
3. Discuss in the group MSMEs opportunities in terms of Orientation and Development.

(Note: It's an indicative one. The course instructor may change the activities and the same shall be reflected in course handout.)

Course Code	Course Title	L	T	P	S	C
22CE101702	ENVIRONMENTAL POLLUTION AND CONTROL	3	-	-	-	3

Pre-Requisite -

Anti-Requisite -

Co-Requisite -

COURSE DESCRIPTION: This course provides a detailed discussion on fundamentals of air pollution, dispersion of pollutants, effects and control of air pollution, water pollution, soil pollution and control, and municipal solid waste management.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1** Analyze air and noise pollution using appropriate tools and techniques to solve complex environmental issues following relevant standards considering society, environment and sustainability besides communicating effectively in graphical form.
- CO2** Analyze air and noise pollution control measures using appropriate tools and techniques to solve complex environmental issues following relevant standards and latest developments considering society, environment and sustainability besides communicating effectively in graphical form.
- CO3** Analyze water pollution and its control measures using appropriate tools and techniques to solve complex environmental issues following relevant standards and latest developments considering society, environment and sustainability besides communicating effectively in graphical form.
- CO4** Analyze soil pollution and its control measures using appropriate tools and techniques to solve complex environmental issues following relevant standards and latest developments considering society, environment and sustainability besides communicating effectively in graphical form.
- CO5** Analyze solid waste and its management measures using appropriate tools and techniques to solve solid waste disposal issues following relevant standards and latest developments considering society, environment and sustainability besides communicating effectively in graphical form.

Course Correlation Mapping	2	3	2	2	2	3	3	2	-	1	1	1

Correlation Levels: 3:High; 2: Medium; 1:Low

COURSE CONTENT

Module1: AIR AND NOISE POLLUTION

(08 Periods)

AirPollution: Scope, Significance, Classification, Sources–Line, Area, Stationary, Mobile; Effects of air pollutants on man, material and vegetation; Global effects of air pollution; Air pollution meteorology–Lapse rate, Inversion, Plume pattern; Dispersion of air pollutants–Dispersion models and applications; Ambient air quality standards.

NoisePollution: Sound pressure, Power and intensity, Impacts of noise, permissible limits of noise pollution, measurement of noise, Noise standards.

Module2: AIR AND NOISE POLLUTION CONTROL

(10 Periods)

Self-cleaning properties of the environment, Dilution method, Control at source, Process changes and equipment modifications, Control of particulates– Types of equipment, Design and operation–Settling chambers, Centrifugal separators, Baghouse filters, Wet scrubbers, Electrostatic precipitators; Control of gaseous pollutants – Adsorption, Absorption, Condensation, Combustion; Control of air pollution from automobiles, Control of noise pollution, Case studies, Latest developments in the air and noise pollution control.

Module3: WATER POLLUTION AND CONTROL

(10 Periods)

Water pollution–Sources, Causes, Effects; Surface and ground water quality–Physical, Chemical, Biological; Drinking water quality standards, Water purification–Processes, Engineered systems–Aeration, Solids separation, Settling operations, Coagulation, Softening, Filtration, Disinfection; Waste water–Sources, Causes, Effects, Treatment process and disposal–Primary, Secondary, Tertiary; Case studies, Latest developments in the water pollution control.

Module4: SOIL POLLUTION AND CONTROL

(08 Periods)

Soil pollutants, Sources of soil pollution, Causes, Effects and control of soil pollution, Diseases caused by soil pollution, Methods to minimize soil pollution, Effective measures to control soil pollution, Soil quality standards, Case studies, Latest developments in the soil pollution control.

Module5: MUNICIPAL SOLID WASTE MANAGEMENT

(09 Periods)

Municipal solid waste–Types, Composition and characteristics; Methods of collection and transportation; Methods of disposal–Open dumping, Sanitary landfill, Composting and Incineration; Utilization–6R Concept, Recovery and recycling and Energy Recovery; Latest developments in solid waste management.

Total Periods: 45

EXPERIENTIAL LEARNING

1. Explain plume patterns due to air pollution and meteorology effects and draw a neat sketch of plume pattern from any chimney that you have observed in recent times.
2. Compare the different air pollution control equipment used in India and draw a neat sketch line diagram of equipment you have seen in any of your industrial visit.
3. Submit a study report on Coagulation, Flocculation, Sedimentation, Filtration and Disinfection in your own words after watching a YouTube video on water treatment.
4. Enumerate the effective measures to control oil pollution with any two case studies.
5. Submit a report on case studies on the use of 6Rs concept of Municipal Solid Waste Management.

(Note: It's an indicative one. The course instructor may change the activities and the same shall be reflected in course handout.)

22EC101702	ESSENTIALS OF VLSI	3	-	-	-	3
Pre-Requisite	-					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION: This course contains the topics that make student realize the need for Testing. The various types of testing along with Fault Modeling. Test methods for evaluation and test generation algorithms, Delay Tests, IDDQ Tests for testing the circuits, Ad-Hoc DFT Methods, Scan Based Designs, Built-In Self Test.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Understand the importance of Testing, fault models and related theorems.
- CO2.** Analyze various test methods as applicable to digital circuits.
- CO3.** Appraise the various combinational and sequential circuit test generation algorithms for functional verification of digital circuits
- CO4.** Assess delay test algorithms and IDDQ test algorithms for at-speed testing of CMOS Integrated Circuits.
- CO5.** Recognize the concepts and architectures for Built-In Self Test to satisfy industry specifications.

Correlation Levels: 3:High; 2:Medium; 1:Low

COURSE CONTENT

Module1: INTRODUCTION TO VLSI

(09 Periods)

Levels of Abstraction, VLSI Design Flow, MOS Transistor-Characteristics, $I_{DS} - V_{DS}$ Relation, NMOS and CMOS Logic-Logic Gates Design, NMOS and CMOS Fabrication Process.

Module2: CMOS CIRCUIT DESIGN PROCESS

(10 Periods)

MOS Layers, Stick Diagrams, NMOS and CMOS Design Styles, Lambda based Design Rules, NMOS and CMOS Layouts for Inverter and Universal Gates, Sheet Resistance, Capacitance and Delay Calculations, Effects of Scaling.

Module3: SUB SYSTEM DESIGN

(11 Periods)

Adders-Manchester Carry Chain Adder, Carry Look Ahead Adder, Carry Select Adder, Carry Skip Adder, Barrel Shifter, Multiplier-Array Multiplier, Booth Multiplier.

Module4: PROGRAMMABLE HARDWARE

(06 Periods)

Design Styles, Programmable Inter connects, Field Programmable Gate Arrays, Complex Programmable Logic Devices, Cell based Design Methodology.

Module5: DESIGN FOR TEST ABILITY

(09 Periods)

Ad-Hoc DFT Methods, Full Scan Design, Partial Scan Design, Random Logic BIST-Test-per-Clock and Test-per-Scan BIST Systems; Boundary Scan Standard-TAP Controller and Port.

Total Periods:45

EXPERIENTIAL LEARNING

1. Develop and Illustrate D –algorithm for Sequential Circuits.
2. Illustrate the applicability of existing testing algorithms for circuits with multiple stuck-at-faults.

(Note: It's an indicative one. The course instructor may change the activities and the same shall be reflected in course handout.)

UNIVERSITY ELECTIVE

Course Code	CourseTitle	L	T	P	S	C
22CB101702	INTRODUCTION TO ETHICAL HACKING	3	-	-	-	3

Pre-Requisite -

Anti-Requisite -

Co-Requisite -

COURSE DESCRIPTION: This course provides a detailed discussion on ethical hacking overview, role of security and penetration testers, foot printing, reconnaissance and scanning networks, enumeration and vulnerability analysis, system hacking, network protection systems.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Understand and recognize role of security and penetration testers to protect the system from malware attacks.
- CO2.** Apply the foot printing tools to find the vulnerabilities in the system.
- CO3.** Analyze vulnerabilities to find the system security loop holes or flaws in networked systems within a given range of IP
- CO4.** Apply the web attackers tools to assess the website's security
- CO5.** Identify the possible incidents and threats, alert administrators, and prevent potential attacks using IDS

COURSE CONTENT

Module1: INTRODUCTION (10 Periods)

Ethical Hacking Overview, Role of Security and Penetration Testers. Penetration, Testing Methodologies, Laws of the Land, Overview of TCP/IP, The Application Layer, The Transport Layer, The Internet Layer, IP Addressing, Network and Computer Attacks, Malware, Protecting Against Malware Attacks, Intruder Attacks, Addressing Physical Security.

Module2: FOOT PRINTING, RECONNAISSANCE AND SCANNING NETWORKS (09 Periods)

Foot printing Concepts, Foot printing through Search Engines, Web Services, Social Networking Sites, Website, Email, Competitive Intelligence, Footprinting through Social Engineering, Footprinting Tools, Network Scanning Concepts, Port-Scanning Tools, Scanning Techniques, Scanning Beyond IDS and Firewall

Module3: ENUMERATION AND VULNERABILITY ANALYSIS**(09 Periods)**

Enumeration Concepts, Net BIOS Enumeration, SNMP, LDAP, NTP, SMTP and DNS Enumeration, Vulnerability Assessment Concepts, Desktop and Server OS Vulnerabilities, Windows OS Vulnerabilities, Tools for Identifying Vulnerabilities in Windows, Linux OS Vulnerabilities, Vulnerabilities of Embedded OSs.

Module4: SYSTEM HACKING**(10 Periods)**

Hacking Web Servers, Web Application Components, Vulnerabilities, Tools for Web Attackers and Security Testers Hacking Wireless Networks, Components of a Wireless Network, Wardriving, Wireless Hacking, Tools of the Trade.

Module5: NETWORK PROTECTION SYSTEMS**(07 Periods)**

Access Control Lists, Cisco Adaptive Security Appliance Firewall, Configuration and Risk Analysis Tools for Firewalls and Routers, Intrusion Detection and Prevention Systems, Network-Based and Host-Based IDSs and IPSs, Web Filtering, Security Incident Response Teams, Honey Pots.

Total Periods:45**EXPERIENTIAL LEARNING**

1. List out various ways used to Protect Your self from Hackers.
2. Demonstrate how do White Hackers work?
3. Demonstrate The bugbounty program.

(Note: It's an indicative one. The course instructor may change the activities and the same shall be reflected in course handout.)

COURSE CONTENT

Module1: INTRODUCTION

(09 Periods)

Introduction, Need, Scope, Concepts and Significance of Forensic Science, History and Development of Forensic Science, Laws and Basic principles of Forensic Science, Branches of forensic science, Organizational set-up of a Forensic Science Laboratory. Investigative strategies. Expert testi mony and eye-witness report.

Module2: TOOLS AND TECHNIQUES IN FORENSICSCIENCE (09 Periods)

Basic principles of microcopy, spectroscopy, chromatography, Electrophoresis, Enzyme-Linked Immunosorbent Assay (ELISA), Radio Immuno Assay (RIA). Measuring and optical instruments. Research methodologies; Formation of research design on a specific problem. Central tendency and Dispersion. Test of significance. Analysis of variance, Correlation and Regression.

Module3: FORENSIC PHOTOGRAPHY (08 Periods)

Basic principles of Photography, Techniques of black & white and color photography, cameras, lenses, shutters, depth of field, film; exposing, development and printing techniques; Different kinds of developers and fixers; UV, IR, fluorescence illumination guided photography; Modern development in photography- digital photography, working and basic principles of digital photography; Surveillance photography. Videography and Crime Scene & laboratory photography.

Module4: CRIMESCENE MANAGEMENT (11 Periods)

Crime scene investigations, protecting and isolating the crime scene; Documentation, sketching, field notes and photography. Searching, handling and collection, preservation and transportation of physical evidences, Chain of custody and Reconstruction of scene of crime. Report writing.

Module5: LAW AND FORENSICSCIENCE (08 Periods)

Legal aspects of Forensic Science: Forensic Science in the Criminal Justice System, The Criminal Investigation Process, Production of Evidence: The Subpoena, The Rules of Evidence, Authentication of Evidence: The Chain of Custody, The Admissibility of Evidence, Laboratory Reports, Examples of Analysis and Reports, Expert Testimony, Getting into Court, Testifying, Being a Witness and an Expert, Considerations for Testimony.

Total Periods: 45

EXPERIENTIAL LEARNING

1. Study of Computer Forensics and different tools used for forensic investigation
2. Identify and list the steps for hiding and extracting any text file behind an image file/Audio file using Command Prompt

(Note: It's an indicative one. The course instructor may change the activities and the same shall be reflected in course handout.)

COURSE CONTENT

Module1: GENDER AND ENVIRONMENT RELATIONSHIP (09 Periods)

Introduction–Gender and Environment–Development of gender roles–Society, gender& environment–Understanding environmental politics–Gender-environment connections– Eco-feminism–Cultural eco-feminism–Social eco-feminism–Feminist political ecology

Module2: GENDERED ROLES IN THE FAMILY& COMMUNITY (09 Periods)

Organization of the house hold–Domestic division of labour–Food: growing, harvesting, shopping, preparing, and cooking

Gender&Power–Planning–Politics–NGO–Gendering of environmental protest–Environmental decision-making

Module3: GENDER AND SUSTAINABLE DEVELOPMENT

(09 Periods)

Concept of sustainability&its achievement– Concept of sustainable development – Ecological Modernization–Gender&sustainability debates–Gender&sustainable development debates - Genderin policy documents– Gender,poverity&equity in sustainable development

Module4: GENDER IN ENVIRONMENTAL JUSTICE

(09 Periods)

Normative Concerns (Fairness,Inequality&Justice)–Making sense of Environmental justice –Ecological debt,Transnationalharm,&human rights–Ecological justice–Gender &Environmental Justice–Gender,Vulnerability&risk–Women in environmental justice movements–Knowledge&participation–Gender,sustainability&justice as guiding concepts.

Module5: GENDER AND ENVIRONMENTAL SECURITY

(09 Periods)

Connections between security&the environment–**Gender,environment &security:** Sustainabilityas security–poverty&in security–In security as in justice–Competing ways of thinking security–Reflecting on sources of in security –**CaseStudy**–Food Security - **CaseStudy**–The impacts of natural disasters

Total Periods:45

EXPERIENTIAL LEARNING

1. Prepare a poster presentation on the impact of globalization on family structure and society.
2. Prepare a presentation on the family setup of different countries and their peculiar customs.
3. Prepare poster presentation on "Ancient homin in walked like a human but climbed like anape."
4. Find out the problems of present society and being part of future generation show you may help to strength enenvironmental security.

(Note:It's an indicative one.Course Instructorm ay change activities and shall be reflected in course Handout)

22ME101701	GLOBAL STRATEGY AND TECHNOLOGY	3	-	-	-	3
Pre-Requisite	-					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION:

Introduction to strategic management; Strategic management process; Principles of good strategy; Globalization strategies; Research and Development strategies; Technology Management and Transfer; Elements of Transfer Process; Corporate Governance in the Indian scenario.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1** Demonstrate the knowledge on strategic management, its approaches, and tools through ethical decision making.
- CO2** Analyse the globalization challenges for scrupulous election of globalization strategies.
- CO3** Apply the R&D strategies and trends to enhance the technological Break throughs for new products and applications.
- CO4** Demonstrate the knowledge on technology management and transfer that strengthen the economy and accelerate the application of technology and resources.
- CO5** Analyze the challenges of corporate governance in Indian scenario or the effective development of value-oriented organizations.

2: Medium;

1: Low

COURSE CONTENT

Module1: STRATEGIC MANAGEMENT

(09 Periods)

Introduction, Classes of decisions, Levels of strategy, Core competence, Strategic intent and stretch, Approaches to strategy making, Roles of different strategists, Strategic Management-Process, Benefits, Limitations; Ethics in strategic decision making, Principles of good strategy, Strategic Management in India; Common managerial strategy formulation tools.

Module2: GLOBALIZATION**(09 Periods)**

Definition, Stages, Essential conditions for globalization, Globalization strategies, Competitive advantage of Nations and regions, Factors affecting Globalization, Globalization of Indian business.

Module3: RESEARCH&DEVELOPMENT STRATEGIES**(09 Periods)**

Concept, Evolution of Rand D Management, RandD business, RandD competitive advantage, Elements of RandD strategies, Integration of RandD, Selection and implementation of RandD strategies, RandD trends and challenges.

Module4: TECHNOLOGY MANAGEMENT AND TRANSFER**(09 Periods)**

Technology Management: Introduction, Technology-Definition, Components, Classification Features; Technology Management-Concept, Nature; Drivers of Management of Technology-Significance, Scope, Responding to technology challenges.

Technology Transfer: Introduction, Definition, Classification, Significance, Elements of process, Types of Technology Transfer, Package, Modes of Transfer, Routes, Channels and Effectiveness of Technology Transfer.

Module5: CORPORATE GOVERNANCE: THE INDIAN SCENARIO**(09 Periods)**

Emergence of corporate governance in India-Land marks, Models, Codes and status in India, Role and Responsibilities of Regulators, The Board of Directors; Corporate Governance-Specific issues in India, Family-owned Business, Corporate Governance and the Indian ethos.

Total Periods:45**EXPERIENTIAL LEARNING**

1. Case studies: Using real-world examples of global businesses and their technological strategies, students can examine the challenges and opportunities presented by different markets and technologies. This can involve analyzing data, conducting market research, and making decisions based on their findings.
2. Simulation games: Students can participate in simulation games that allow them to make decisions about global strategy and technology in a virtual environment. This can help them understand the complexities of international business, such as navigating different cultures, regulations, and economic systems.
3. Industry partnerships: Partnerships with technology companies and global businesses can provide students with hands-on experience in global strategy and technology. This can include internships, shadowing, or working on real projects with industry professionals.
4. Project-based learning: Students can work on real-world projects that require them to apply their knowledge of global strategy and technology. This can include developing a business plan for a new product or service, designing a marketing campaign for a global audience, or analyzing the impact of a new technology on a specific industry.
5. Field trips: Visiting international businesses or attending technology conferences can provide students with a first-hand look at global strategy and technology in action. This can help them understand the challenges and opportunities of different markets and technologies, as well as connect with industry professionals.

(Note: It's an indicative one. Course instructor may change the activities and the same shall be reflected in course handout)

CASE STUDIES:

1. Tesla: Can Elon Musk's electric car company succeed globally?
2. Uber: How the ride-sharing giant is expanding its global footprint.
3. Alibaba: How China's e-commerce giant is competing on the global stage.
4. Airbnb: How the home-sharing platform is disrupting the global hotel industry.
5. Netflix: How the streaming service is expanding globally and adapting to local markets.

UNIVERSITY ELECTIVE

Course Code	Course Title	L T P SC
22EE101704	GREEN TECHNOLOGIES	3 - - - 3
Pre-Requisite	-	
Anti-Requisite	-	
Co-Requisite	-	

COURSE DESCRIPTION: This course provides a detailed discussion on green technology concepts, the role of industry and government in establishing green energy foot prints and cleaner development mechanisms. It also presents energy-efficient and sustainable green production systems, concepts of energy eco systems, and concepts of green buildings.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Understand the green technology concepts and the consequences of green house gas emissions.
- CO2.** Acquire basic knowledge on cleaner development mechanism, the importance of re-use of materials, and the oxidation technology for waste water.
- CO3.** Go beyond energy-efficient machinery, biofuels, and environmentally friendly materials.
- CO4.** Acquire basic knowledge on man-made eco systems, sources, and control of pollution.
- CO5.** Understand the concepts and requirements for green buildings.

CO-PO Mapping Table

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	-	-	-	-	-	3	-	-	-	-	1

CO3	3	-	-	-	-	-	3	-	-	-	-	1
CO4	3	-	-	-	-	-	3	-	-	-	-	1
CO5	3	-	-	-	-	-	3	-	-	-	-	1
Course Correlation Mapping	3	-	-	-	-	-	3	-	-	-	-	1

Correlation Levels: 3:High; 2: Medium; 1:Low

COURSE CONTENT

Module1: INTRODUCTION TO GREEN TECHNOLOGY (09 Periods)

Green technology-definition, importance, factors affecting green technology. Global atmosphere-green house gases, global warming, acid rain, ozone depletion and photochemical smog. Role of industry, government and institutions; industrial ecology, role of industrial ecology in green technology.

Module2: CLEANER DEVELOPMENT TECHNOLOGIES (08 Periods)

Cleaner development mechanisms, role of industry; reuse, reduce and recycle, raw material substitution; wealth from waste; carbon credits, carbon trading, carbon sequestration, ecolabeling. Oxidation technology for waste water treatment-cavitation, fenton chemistry, photocatalysis and hybrid processes.

Module3: ENERGY EFFICIENT SYSTEMS AND PROCESSES (09 Periods)

Energy efficient motors, energy efficient lighting, control and selection of luminaries; bio-fuels, fuel cells-working, selection of fuels, Green manufacturing systems, selection of recyclable and environment friendly materials in manufacturing, design and implementation of sustainable green production systems.

Module4: ENERGY ECOLOGY AND ENVIRONMENT (08 Periods)

Concept and theories of eco systems-energy flow in major man made eco systems-agricultural, industrial and urban eco systems- sources of pollution from energy technologies and its impact on atmosphere-air, water, soil, and environment-environmental laws on pollution control-innovation and sustainability:-eco-restoration / phyto-remediation, renewable energy technologies, industrial ecology and agro ecology.

Module5: GREEN BUILDINGS (10 Periods)

Definition-Features and benefits, Fundamental planning decisions for energy efficient building-site selection, buildings forms and orientations, building fabrics and insulation, ventilation, passive solar features. Eco-friendly and cost effective materials, energy management. Roof top solar photovoltaic system and solar tracking system, alternating roofing systems.

Total Periods:45

EXPERIENTIAL LEARNING

1. The student shall prepare a report on the causes of global warming and should suggest possible remedies for reducing the global warming
2. The student shall prepare a report on the wastewater management system.
3. The student shall prepare a report on controlling pollution in the environment.
4. The student shall observe the various considerations in a green house building and should prepare the report on the observations made and should suggest possible avenues for improvement.

(Note: It's an indicative one. Course instructor may change the activities and the same shall be reflected in course handout)

Co-Requisite	-					

COURSE DESCRIPTION:

Concepts of HRM;Environmental Scanning;Human Resource Planning;Job analysis;Job design;Job evaluation;Recruitment; Selection;Placement;Orientation;Training and Development;Performance appraisal;Merit rating;Compensation;Industrial relations; Trade unions;Industrial disputes;Ethical issues;Employee safety.

COURSE OUTCOMES:After successful completion of the course,students will be able to:

- CO1.** Demonstrate the knowledge on the principles, processes and practices of human resource management.
- CO2.** Analyze the key issues related to administering the human elements such as motivation,recruitment,training and development,compensation,appraisal,and career development.
- CO3.** Provide solutions to plan and manage human resource functions effectively within organization.
- CO4.** Apply HRM concepts and techniques in strategic planning to improve organizational effectiveness.
- CO5.** Evaluate HRM related social,cultural and safe responsibilities and issues in a global context.

COURSE CONTENT

Module1: INTRODUCTION TO HRM&HRP

(09 Periods)

Introduction to Human Resource Management (HRM): Objectives, Scope and significance of HRM,Functions of HRM,Prospects in HRM,Environmental scanning.

Human Resource Planning(HRP): Introduction, Nature and importance of HRP, Factors affecting HRP,The planning process, Human resource planning and the Government, Requisites for successful HRP,Barriers to HRP.

Module2: RECRUITMENT AND PLACEMENT**(09 Periods)**

Job Analysis–Nature and process of job analysis,Methods of collecting job data, Potential problems with job analysis,Requisites for job analysis;Job Design-Factors,Job design approaches,Contemporary issues;Job evaluation-Process,Methods;Recruitment-Nature,Purposes and importance,Factors governing recruitment, Recruitment process, Evaluation and control;Selection – Nature, Process, Barriers to effective selection, Evaluation of selection process,Placement;Separation.

Module3: HUMAN RESOURCE DEVELOPMENT AND COMPENSATION**(09 Periods)**

Orientation-Orientation programme,Requisites of an effective programme, Evaluation of orientation programme,Problems of orientation;Training and development–Nature, Inputs, Training process, Methods, Impediments to effective training, Management development,Career development,Talent management;Performance Appraisal-Nature, Appraisal process,Challenges of performance appraisal;Meritrating;Compensation-Philosophy, Components, Theories, Factors influencing employee compensation, Challenges,Wage and salary administration.

Module4: INDUSTRIAL RELATIONS AND TRADE UNIONS**(09 Periods)**

IndustrialRelations (IR):Nature of IR,Importance of Peaceful IR;Approaches to IR-Unitary Approach,Pluralistic approach,Marxist approach;Parties to IR;IR strategy;Industrial Disputes-Nature,Causes,and Settlement.

Tradeunions:Nature of trade unions,Strategic choices before unions,Union tactics,Trade union movement in India,Trends in trade union movement,Managing unions;Indian Factories Act;Employee's compensation Act;Industrial disputes Act.

Module5: ETHICAL ISSUES AND SAFETY ADMINISTRATION**(09 Periods)**

Managing Ethical Issues in HRM:Nature of ethics,Sources of business ethics,Myths about ethics,Ethical dilemmas, HR ethical issues,Managing ethics,Improving ethical decision making.

Employee Safety:Safety,Need for safety,Types of accidents,Safety programme,ISO Safety standards.

Total Periods:45**EXPERIENTIAL LEARNING**

1. What are the challenges that are faced by HR in effective performance management including performance appraisal in MNCs? Discuss in detail in the contemporary of HRM.
2. Evaluate employee relations in a comparative perspective across few countries of your choice.Describe in brief by taking a case study.
3. Visit an organization or industry and Evaluate HRM related social,cultural,ethical and environmental responsibilities and issues in a global context.

(Note:It's an indicative one.Course instructor may change the activities and the same shall be reflected in course handout)

COURSE CONTENT

Module1: INTRODUCTION

(09 Periods)

Economics-Flow in an Economy, Law of Supply and Demand; Micro and Macro Economics; Relationship between Science, Engineering, Technology and Economic Development; Concept of Engineering Economics-Types of Efficiency, Definition and Scope of Engineering Economics.

Module2: ELEMENTARY ECONOMIC ANALYSIS

(09 Periods)

Economic Analysis – Meaning, Significance, Simple Economic Analysis; Material Selection for a Product, Substitution of Raw Material; Design Selection for a Product; Material Selection-Process Planning, Process Modification.

Module3: ECONOMIC PLANNING**(09 Periods)**

Introduction-Need For Planning in India, Five-year plans (1951-2012), NITI Aayog (from 2014 onwards); Inclusive Growth-Meaning, Significance, Need for inclusive growth in India, Strategy for more inclusive growth, Challenges and Prospects; Employment and Inclusive Growth in India, Role of engineers in sustaining inclusive growth.

Module4: TIME VALUE OF MONEY**(12 Periods)**

Concepts and Application; Capital Budgeting-Traditional and Modern Methods; Simple and Compound Interest, Cash Flow Diagram, Principle of Economic Equivalence; Evaluation of Engineering Projects-Present Worth Method, Future Worth Method, Annual Worth Method, Internal Rate of Return Method, Cost-benefit Analysis in Public Projects; Depreciation Policy-Depreciation of Capital Assets, Causes of Depreciation, Straight Line Method and Declining Balance Method.

Module5: VALUE ANALYSIS/VALUE ENGINEERING**(06 Periods)**

Introduction-Value Analysis, Value Engineering, Functions, Aims; Value Analysis vs Value Engineering; Value Engineering Procedure-Advantages, Application Areas.

Total Periods:45**EXPERIENTIAL LEARNING**

1. Prepare a poster presentation on the impact of globalization on family structure and society.
2. Prepare a presentation on family setups of different countries and their peculiar customs if any.
3. Prepare a poster presentation on "Ancient hominids walked like a human but climbed like an ape."
4. Find out the problems of present society and being part of future generations and how you may help to strengthen environmental security.

(Note: It's an indicative one. Course Instructor may change activities and shall be reflected in course Handout)

COURSE CONTENT

Module1: INTRODUCTION TO INDIAN HISTORY (08 Periods)

Elements of Indian History; History Sources: Archaeology, Numismatics, Epigraphy & Archival research; Methods used in History; History & historiography; Sociological concepts-structure, system, organization, social institutions, Culture and social stratification (caste, class, gender, power), State & Civil Society.

Module2: ANCIENT INDIA (09 Periods)

Mohenjo-Daro civilization; Harappan civilization; Mauryan Empire.

Module3: CLASSICAL&MEDIEVALERA**(12 Periods)**

ClassicEra(200BC-1200AD);Hindu-IslamicEra(1200-1800AD).

Module4: MODERN INDIA**(06 Periods)**

Age of Colonialism(17th-19th centuries);First war of Indian Independence;Freedom Struggle (1857-1947)

Module5: INDIA AFTER INDEPENDENCE (1947 -)**(10 Periods)**

The Evolution of the Constitution and Main Provisions; Consolidation of India as a Nation; Politics in the States; Indian economy;Modernization and globalization,Secularism and communalism, Nature of development, Processes of social exclusion and Inclusion, Changing Nature of Work and Organization.

Total Periods:45**EXPERIENTIAL LEARNING**

1. Prepare a write-up on how to safe guard ancient monuments.
2. Analyze the most famous historically important place you visited.
3. Prepare a presentation on the ancient Seven Wonders of the World with their significance and how they a redestroyed.
4. Prepare a presentationon"Wars of the pastnotonly destroyed people and their live lihood but also the people'stradition and culture."
5. Prepare a poster on"Continents that No Longer Exist"with causes

(Note:It's an indicative one.Course Instructor may change activities and shall be reflected in course Handout)

COURSE CONTENT

Module1: BASIC TRAITS OF INDIAN CULTURE (08 Periods)

Meaning and definition and various interpretations of culture- Culture and its features
 -The Vedic and Upanishad culture and society-Human aspirations and values in these societies-Chaturvedhapurushardhas, Chaturashrma and Chaturvarna theory.

Module2: HUMANISTIC REFORMS UNDER JAINISM AND BUDDHISM (09 Periods)

Salient features of Jainism- contributions of Jainism to Indian culture-Contributions of Achaarya and Mahaapragya-Buddhism to humanistic culture-The four noble truths of Buddhism-Contributions of Buddhism to Indian culture.

Module3: CULTURE IN THE MEDIEVAL PERIOD (09 Periods)

Unifications of India under Mouryas and Guptas and their cultural achievements – Cultural condition under Satavahanas-Contributions to Pallavas and Cholas to art and cultural achievements of Vijayanagar rulers

Module4: SOCIO RELIGIOUS REFORMS IN INDIAN CULTURE (09 Periods)

Western impact on India-Introduction of Western education-social and cultural awakening and social reform movements of Rajaram Mohan Roy-Dayanand Saraswati – Anne Besant (Theosophical Society).

Module5: REFORM MOVEMENTS FOR HARMONIOUS RELATIONS (09 Periods)

Vivekananda, Eswar Chandra Vidyasagar and Veeresalingam – emancipation of women and struggle against caste-Rise of Indian nationalism-Mahatma Gandhi-Non-violence and satyagraha and eradication of untouchability.

Total Periods:45

EXPERIENTIAL LEARNING

1. Identify different cultural festivals of Indian States and prepare a write-up on their uniqueness.
2. India has a rich history with numerous architectural wonders. Prepare a report on any three famous architectural wonders in India.
3. Explore the diverse flavors of Indian cuisine and prepare a poster on the different dishes and their distinctiveness.
4. India is a country of Unity in Diversity. Make a Power Point presentation on different traditional dresses of various cultural people.

(Note: It's an indicative one. Course Instructor may change activities and shall be reflected in course Handout)

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module1: DISPLACEMENT, FORCE & TORQUE MEASUREMENT (08 Periods)

Displacement Measurement: Introduction, Strain gauge, LVDT, Capacitive Gauges and applications.

Force Measurement: Introduction, Analytical Balance, Spring Balance, Load cells.

Torque Measurement: Introduction, Strain gauge, Relative angular twist and applications.

Module2: ACCELERATION, VELOCITY & DENSITY MEASUREMENT (08 Periods)

Acceleration Measurement: Introduction, LVDT, Piezo electric, Strain gauge and Variable reluctance type accelerometers and applications.

Velocity Measurement: Introduction, Revolution Counter, Capacitive Tacho, Drag-cup Type, Tacho and Strobe scope and applications.

Density Measurement: Introduction, Pressure type densitometers, Float type densitometers, Ultrasonic densitometer and gas densitometer.

Module 3: VISCOSITY, HUMIDITY & MOISTURE MEASUREMENT (09 Periods)

Viscosity Measurement: Introduction, friction tube viscometer, Saybolt viscometer, Rotameter viscometer, Searle's rotating cylinder, cone and plate viscometer.

Humidity Measurement: Introduction, Dry and wet bulb psychrometers, Resistive and capacitance hygrometers

Moisture Measurement: Introduction, Thermal Conductivity and Capacitive sensors, Applications of moisture measurement, Moisture measurement in solids.

Module 4: TEMPERATURE & PRESSURE MEASUREMENT (10 Periods)

Temperature Measurement: Definitions and standards, RTD, Thermistor, Thermocouples: Laws of the thermocouple, Reference junctions compensation, Radiation fundamentals, Radiation methods of temperature measurement, Total radiation pyrometers, Optical pyrometers, Applications.

Pressure Measurement: Introduction, manometer and its types, elastic transducers Bourdon tube, diaphragm, bellows, electrical types, resistive, inductive and capacitive, Thermal conductivity gage, Ionization gage, Sound level meter, Microphone, Applications.

Module 5: LEVEL & FLOW MEASUREMENT (10 Periods)

Level Measurement: Introduction, Gauge Glass technique, Float Types—Float and tape method, Float and shaft method, Magnetic float types. Electrical types—Resistance switch type, Inductive and Capacitance type. Ultrasonic methods. Applications

Flow Measurement: Introduction, Head types – Orifice, Venturi, Flow Nozzle. Rotameter & types. Coriolis flowmeter, Gyroscopic flowmeter, Liquid bridge mass flow meter, Calorimetric flowmeter. Electromagnetic flowmeter, Ultrasonic flowmeter, Hot wire anemometer type. Applications.

Total Periods: 45

EXPERIENTIAL LEARNING

1. Record temperature from RTD and convert temperature into voltage.
2. Measure the speed of rotating shaft using strobe scope.
3. Record level of the tank using suitable device.
4. Measure the flow rate of water in boiler plant.
5. Measure the displacement using LVDT.

(Note: It's an indicative one. The course instructor may change the activities and the same shall be reflected in course handout.)

22EC101704	INTRODUCTION TO NANO TECHNOLOGY	3	-	- 3
Pre-Requisite	-			
Anti-Requisite	-			
Co-Requisite	-			

COURSE DESCRIPTION: The fundamental principles of nano electronics and the utilization of nano structures as nano electronic devices.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Demonstrate the basic knowledge in nano electronics, crystal structure of semi conducting material various techniques for fabrication and measurement of Nano structure, semi conducting nano electronic devices.
- CO2.** Analyze Crystal structure of nano materials Nano structure based device
- CO3.** Design and develop new nano devices for advanced technological applications.
- CO4.** Capable of solving problems in the field of nano electronics.
- CO5.** Involve and resolve the future research challenges in the fields related to nano electronics.
- CO6.** Apply the environmental context with ethical principle in developing new nano devices.

Correlation Levels: 3:High; 2:Medium; 1:Low

COURSE CONTENT

MODULE-I:INTRODUCTION TO NANO ELECTRONICS (08 Periods)

The "Top-Down" Approach, Lithography, The "Bottom-Up" Approach; Why Nano electronics? Nano technology Potential. The Schrödinger wave equation, Wave mechanics of particles, Atoms and atomic orbitals

MODULE II: MATERIALS FOR NANO ELECTRONICS (09 Periods)

Semiconductors, Crystal lattices: bonding in crystals, Electron energy bands, Semiconductor hetero structures, Lattice-matched and pseudomorphic hetero structures; Organic semiconductors, Carbon nano materials: nano tubes and fullerenes.

MODULE III: FABRICATION AND MEASUREMENT TECHNIQUES FOR NANO STRUCTURES (10 Periods)

Bulk crystal and hetero structure growth: Nano lithography, etching, and other means for fabrication of nano structures and nano devices; Techniques for characterization of nano structures, Spontaneous formation and ordering of nano structures; Clusters and nano crystals, Methods of nano tube growth, Chemical and biological methods for nano scale fabrication, Fabrication of nano electro mechanical systems.

MODULE IV: SEMI CONDUCTING NANO STRUCTURES (09 Periods)

Time and length scales of the electrons in solids, Statistics of the electrons in solids and nano structures; The density of states of electrons in nano structures, Electron transport in nano structures, Electrons in Quantum well, Quantum wire and Quantum dots.

MODULE V: NANO ELECTRONIC DEVICES (09 Periods)

Resonant tunneling diodes, Field effect transistors, Single electron transfer devices, Potential effect transistors, Light emitting diodes and lasers; Nano electro mechanical system devices, Quantum dot cellular automata.

Total No. of Periods: 45

EXPERIENTIAL LEARNING

1. Submission of report on specifications of Clean room.
2. Submission of report on specifications of Clean bench.

(Note: It's an indicative one. The course instructor may change the activities and the same shall be reflected in course handout.)

22AI101701	INTRODUCTION TO ARTIFICIAL INTELLIGENCE	3	-	-	-	3

Pre-Requisite -

Anti-Requisite -

Co-Requisite -

COURSE DESCRIPTION: This course provides a detailed discussion and hands-on experience on Introduction to Artificial Intelligence, Designing intelligent agents, Solving general purpose problems, Search in complex environments, Represent knowledge, Robotics, Ethics.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1** Analyze and Architect intelligent agents using Artificial Intelligence Techniques and principles
- CO2** Analyze the usage of Knowledge representation techniques in Artificial Intelligence
- CO3** Analyze and interpret the problem, identify suitable solutions using heuristic functions and search algorithms
- CO4** Investigate robot hardware and frame works for intelligent robotic perception.
- CO5** Demonstrate knowledge on ethical implications of intelligent machines for providing privacy, trust, security and safety.

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module1 INTRODUCTION TO ARTIFICIAL INTELLIGENCE (09 Periods)

Foundations of artificial intelligence, History of artificial intelligence, State of the art, Risks and benefits of AI, Intelligent agents–Agents and environments, The concept of rationality, Structure of agents.

Module2 KNOWLEDGE&REASONING

(09 Periods)

Logic,Propositional Logic,Propositional Theorem Proving:Inference and proofs,Proof by resolution, Hornclauses and definite clauses.

First-Order Logic-Syntax and Semantics of First-Order Logic, Using First Order Logic, Knowledge Engineering in First-Order Logic. Inference in First-Order Logic:Propositional vs. First-Order Inference, Unification, Forward Chaining, Backward Chaining, Resolution.

Module3 PROBLEM SOLVING BY SEARCHING

(09 Periods)

Problem solving agents, Search algorithms, Uninformed search strategies, Informed search strategies–Greedy best-first search, A*search;Heuristic functions.

Module4 SEARCH IN COMPLEX ENVIRONMENTS

(09 Periods)

Local search algorithms and optimization problems–Hill-climbing search,Simulated annealing, Local beam search, Evolutionary algorithms;Optimal decisions in games–The minimax search algorithm, Optimal decisions in multiplayer games,Alpha-Beta pruning, Move ordering;Monte Carlo tree search.

Module5: ROBOTICS

(09 Periods)

Robots,Robot hardware,Robotic perception,Alternative robotic frameworks,Application domains.

Limits of AI, Ethics of AI–Surveillance, security and privacy,Fairness and bias,Trust and transparency,AI safety

Total Periods:45

EXPERIENTIAL LEARNING

LIST OF EXERCISES:

1. Design and implement agent programs for Table-driven agents using the agent function of vacuum-cleaner world. The agent cleans the current square if it is dirty, otherwise it moves to the other square.
2. Implement agent programs for Simple reflex agents and Model-based reflex agents using the agent function of vacuum-cleaner world.
3. Solve the travelling sales man problem using Hill Climbing search algorithm

(Note:It's an indicative one.The Course Instructor may change the activities and the same shall be reflected in Course Handout)

COURSE CONTENT

Module-1: INTRODUCTION

(09 periods)

Introduction to Data Science, Evolution of Data Science, Data Science Roles, Stages in a Data Science Project, Applications of Data Science in various fields, Data Security Issues.

Module-2: DATA COLLECTION AND DATA PRE-PROCESSING

(09 periods)

Data Collection Strategies, Data Pre-Processing- Overview, Data Cleaning, Data Integration and Transformation, Data Reduction, Data Discretization.

Module-3: EXPLORATORY DATA ANALYTICS

(09 periods)

Descriptive Statistics, Mean, Standard Deviation, Skewness and Kurtosis, Box Plots, Pivot Table, HeatMap, Correlation Statistics, ANOVA.

Module-4:MODEL DEVELOPMENT**(09 periods)**

Simple and Multiple Regression, Model Evaluation using Visualization, Residual Plot, Distribution Plot, Polynomial Regression and Pipelines, Measures for In-sample Evaluation, Prediction and Decision Making.

Module-5:MODELEVALUATION**(09 periods)**

Generalization Error, Out-of-Sample Evaluation Metrics, Cross Validation, Overfitting, Under Fitting and Model Selection, Prediction by using Ridge Regression, Testing Multiple Parameters by using Grid Search.

Total periods:45**EXPERIENTIAL LEARNING**

1. **Use Case:** A human can express his emotions in any form, such as the face, gestures, speech and text. The detection of text emotions is a content-based classification problem. Detecting a person's emotions is a difficult task, but detecting the emotions using text written by a person is even more difficult as a human can express his emotions in any form.

Recognizing this type of emotion from a text written by a person plays an important role in applications such as chat bots, customer support forum, customer reviews etc. So you have to train a machine learning model that can identify the emotion of a text by presenting the most relevant emoji according to the input text.

2. **Use Case:** Customer Personality Analysis is a detailed analysis of a company's ideal customers. It helps a business to better understand its customers and makes it easier for them to modify products according to the specific needs, behaviours and concerns of different types of customers.

You have to do an analysis that should help a business to modify its product based on its target customers from different types of customer segments. For example, instead of spending money to market a new product to every customer in the company's database, a company can analyze which customer segment is most likely to buy the product and then market the product only on that particular segment.

COURSE CONTENT

Module1: INTRODUCTION TO MACHINE LEARNING (10 Periods)

Machine Learning: Human learning, Types of human learning, Machine learning, Types of machine learning, Applications of machine learning, Issues in machine learning, Machine learning activities, Types of data, Selecting a model, Training a model, Model representation and interpretability, Evaluating performance of a model, Improving performance of a model.

Module2: BAYESIAN CONCEPT LEARNING (07 Periods)

Introduction, Importance, Bayes' theorem, Bayes optimal classifier, Naïve Bayes classifier, Applications of Bayes classifier.

Module3: SUPERVISED LEARNING (10 Periods)

Classification: Classification model, Classification learning steps, K-Nearest Neighbor, Decision Tree, Support vector machines.

Regression: Introduction, Simple linear regression, Improving accuracy of the linear regression model, Multiple linear regression, Assumptions and problems in regression analysis.

Module4: UNSUPERVISED LEARNING (09 Periods)

Introduction, Unsupervised vs supervised learning, Applications of unsupervised learning, Clustering as a machine learning task, Types of clustering techniques, Partitioning methods, K-Medoids, Hierarchical clustering, DBSCAN.

Module5: ARTIFICIAL NEURAL NETWORKS (09 Periods)

Artificial neuron, Types of activation functions, Early implementations of ANN, Architectures of neural network, Learning process in ANN, Back propagation.

Total Periods: 45

EXPERIENTIAL LEARNING

1. Use Naïve Bayes classifier to solve the credit card fraud detection problem.
2. Build a neural network that will read the image of a digit and correctly identify the number.

(Note: It's an indicative one. The Course Instructor may change the activities and the same shall be reflected in Course Handout)

22CS101701	INTRODUCTION TO PYTHON PROGRAMMING	3	-	-	-	3

Pre-Requisite -

Anti-Requisite -

Co-Requisite -

COURSE DESCRIPTION: This course is aimed at offering the fundamental concepts of Python scripting language to the students. It starts with the basics of Python programming and deals with lists, dictionaries, functions, exceptions and files. The objective of this course is to enable the students to develop the applications using the concepts of Python.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Understand the basic terminology used in computer programming to write, compile and debug programs in Python programming language.
- CO2.** Use appropriate data type for handling user data and write optimized programs using the functions, and statements.
- CO3.** Manage the exceptions raised during the program execution and avoid abrupt termination of the program execution.
- CO4.** Process files and solve real world problems using classes and objects in the Python programming environment.

CO-PO Mapping Table

Course Outcomes	Program Outcomes

CO3	3	3	3	-	-	-	-	-	-	-	2	-
CO4	2	3	3	-	-	-	-	2	-	-	-	-
Course Correlation Mapping	3	3	3	-	-	-	2	2	-	-	2	-

Correlation Levels: 3:High; 2: Medium; 1:Low

COURSE CONTENT

Module1: DATATYPES AND INPUT/OUTPUT (09 Periods)

Internal working of Python, Python character set, Tokens, Python Core Data Types (list, set, tuple, and dictionary), The print() function, Assignment of values to variables, The input() function, The eval() function.

Module2: OPERATORS AND CONTROL STATEMENTS (09 Periods)

Operators- Arithmetic Operators, Operator precedence and Associativity, Bitwise operator, The compound assignment operator; Decision statements- Boolean operators, Boolean

Expressions and Relational operators, Decision making statements; Loop Control Statements-while loop, range() function, for loop; break statement, continue statement.

Module3: FUNCTIONS AND LISTS

(09 Periods)

Functions-Syntax and basics of a function, Use of a function, Parameters and arguments in a function, The local and global scope of a variable, The return statement, Recursive functions, The lambda function; Lists-Creating Lists, Accessing the elements of a List, List slicing, Python in-built functions for lists, List Comprehension, List Methods, Passing list to a function, Returning a list to function.

Module4: TUPLES, SETS AND DICTIONARIES

(09 Periods)

Tuples-Creating tuples, tuple() function, In built functions for tuples, Indexing and Slicing, Operations on tuples, Passing variable length arguments to tuples, Sort tuples, Traverse tuples from a list, The zip() function, The Inverse zip(*) function; Sets-Creating sets, The set in and not in operator, The Python Set Class, Set operations; Dictionaries-Basics of Dictionaries, Creating a Dictionary, Adding and replacing values, Retrieving values, Formatting dictionaries, Deleting items, Comparing two dictionaries, Methods of dictionary class, Traversing dictionaries, Nested dictionaries, Traversing nested dictionaries.

Module5: V FILES

(09 Periods)

File Handling-Opening a file, Writing Text, Closing files, Writing numbers to a file, Reading Text, Reading numbers from a file, Appending data, seek() function.

Total Periods:45

EXPERIENTIAL LEARNING

1. Calculator: Create a basic calculator program that can perform addition, subtraction, multiplication, and division operations. You can enhance it by adding more functionality, such as handling decimal numbers or including additional mathematical operations.
2. Develop recursive functions to solve problems that involve self-referential definitions.
3. Develop program to create dictionaries, add, retrieve and delete items from dictionaries.
4. Word Counter: Design a program that counts the number of words, characters, or lines in a given text file. You can also include additional features like finding the most common words or displaying statistics about the text.
5. Tic-Tac-Toe: Implement a two-player tic-tac-toe game where users take turns marking Xs and Os on a 3x3 grid. Determine the winner or detect a tie by checking the board after each move.
6. Dice Rolling Simulator: Create a program that simulates rolling dice. Allow the user to specify the number of dice to roll and display the results. You can also add features like keeping track of the roll history or calculating the probability of certain outcomes.

(Note: It's an indicative one. The Course Instructor may change the activities and the same shall be reflected in Course Handout)

22CB101704	INTRODUCTION TO INTERNET OF THINGS	3	-	-	-	3

Pre-Requisite -

Anti-Requisite -

Co-Requisite -

COURSE DESCRIPTION: This course is emphasize on the Architecture of IoT and Summarize the roles of various organizations for IoT, To Develop simple applications using Arduino and Raspberry, Test for errors in the application, Predict the market value, Experiment with embedded boards for creating IoT prototypes, To understand the domain specific IoTs and IoT system management.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

CO1 Understand the fundamental concepts of IoT and physical computing.

CO2 Demonstrate knowledge on variety of embedded boards and IoT Platforms

CO3 Understand the communication protocols in IoT communications.

CO4 Demonstrate knowledge on Domain specific IoT applications.

CO5 Understand the IoT System management and network management protocols.

1: Low

COURSE CONTENT

Module1: OVERVIEW OF IOT

(09 Periods)

The Internet of Things: An Overview, The Flavour of the Internet of Things, The "Internet" of "Things", The Technology of the Internet of Things, Enchanted Objects, Who is Making the Internet of Things?

Design Principles for Connected Devices: Calm and Ambient Technology, Privacy, Web Thinking for Connected Devices, Affordances.

Proto typing: Sketching, Familiarity, Costs Vs Ease of Prototyping, Proto types and Production, Open source Vs Closesource, Tapping in to the community.

Module2: EMBEDDED DEVICES:

(09 Periods)

Electronics, Embedded Computing Basics, Arduino, Raspberry Pi, Mobile phones and tablets, Plug Computing: Always-on Internet of Things

Module3 COMMUNICATION IN THE IOT:**(09 Periods)**

Internet Communications: An Overview, IP Addresses, MAC Addresses, TCP and UDP Ports, Application Layer Protocols

Proto typing Online Components: Getting Started with an API, Writing a New API, Real-Time Reactions, Other Protocols Protocol

Module4 DOMAIN SPECIFIC IOTS**(09 Periods)**

Introduction: Home automation, Cities, Environment, Energy, Retail, Logistics, Agriculture, Industry, Health and Lifestyle

Module5 IOT AND M2M**(09 Periods)**

Introduction-M2M, Difference between IoT and M2M, SDN and NFV for IoT

IoT System Management with NET CONF-YANG: Need for IoT Systems Management, Simple network management protocol (SNMP), Network operator requirements, NETCONF, YANG

Total Periods:45**EXPERIENTIAL LEARNING**

1. (a) Design and Simulate LED7-Segment Display interfacing with Arduino.
(b) Design and Simulate Servomotor interfacing with Arduino.
 2. (a) Design and Simulate ultrasonic sensor and LCD interfacing with Arduino.
(b) Design and Simulate Flame Sensor interfacing with Arduino.
- (Note: It's an indicative one. The Course Instructor may change the activities and the same shall be reflected in Course Handout)*

22ME101703	MANAGEMENT SCIENCE	3	-	-	-	3
Pre-Requisite	-					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION:

Concepts of Management; Concepts Related to ethics and social responsibility; Human Resource Management; Operations Management; Statistical Process Control; Inventory Management; Marketing; Project Management; Project Crashing.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1** Demonstrate the concepts of management, its functions and processes used in optimum resource utilization within the context of ethics and social responsibility.
- CO2** Apply the concepts of HRM for selection and management of human resources.
- CO3** Analyze different operations management problems using quality management Tools to produce effective, efficient and adoptable products/services
- CO4** Identify different marketing strategies to maximize enter prise profitability and customer satisfaction with in the realistic constraints
- CO5** Develop network models in time-cost trade-off for effective project management.

COURSE CONTENT

Module1: MANAGERIAL FUNCTION AND PROCESS

(10 Periods)

Concept and foundations of management, Evolution of management thought; Managerial functions– Planning, Organizing, Directing and Controlling; Decision-making; Role of manager, managerial skills; Managing in a global environment, Flexible systems management; Social responsibility and managerial ethics; Process and customer orientation; Managerial processes on direct and indirect value chain.

Module2: HUMAN RESOURCE MANAGEMENT

(08 Periods)

Human Resource challenges; Human Resource Management functions; Human Resource Planning; Job analysis; Job evaluation, Recruitment and selection; Training and Development; Promotion and transfer; Performance management; Compensation management and benefits; Employee morale and productivity; Human Resource Information System.

Module3: OPERATIONS MANAGEMENT**(10 Periods)**

Fundamentals of Operations Management, Services as a part of operations management; Facilities location and layout; Line balancing; Quality management–Statistical Process Control, Total Quality Management, Sixsigma; Role and importance of materials management, Value analysis, Make or Buy decision, Inventory control, Materials Requirement Planning, Enterprise Resource Planning, Supply Chain Management.

Module4: MARKETING MANAGEMENT**(08 Periods)**

Concept, evolution and scope; Marketing strategy formulation and components of marketing plan; Segmenting and targeting the market; Positioning and differentiating the market offering, Analyzing competition; Product strategy; Pricing strategies; Designing and managing marketing channels; Integrated marketing communications.

Module5: PROJECT MANAGEMENT**(09 Periods)**

Project management concepts; Project planning–Work Break down Structure, Gantt chart; Project scheduling–Critical Path Method, Program Evaluation and Review Technique, Crashing the project for time-cost trade off; Resource Levelling.

Total Periods:45**EXPERIENTIAL LEARNING**

1. Find the social responsibilities in the context of management theoretically and practically in an organization? Explain them by taking a real case study in any organization (preferably in your organization).
2. Gaining market share should be one of management's primary goals because of its effect on operations and profitability. Comment. What Strategies Do Companies Employ to Increase Market Share?
3. A Gantt chart is a visualization that helps in scheduling, managing, and monitoring specific tasks and resources in a project. Prepare a Gantt chart for Online food ordering system.

(Note: It's an indicative one. Course instructor may change the activities and the same shall be reflected in course handout)

22ME101704	MANAGING INNOVATION AND ENTREPRENEURSHIP	3	-	-	-	3

Pre-Requisite -

Anti-Requisite -

Co-Requisite -

COURSE DESCRIPTION:

Evolution of entrepreneurship from economic theory Managerial and entrepreneurial competencies; Concepts of Shifting Composition of the Economy Purpose ful Innovation & Sources of Innovative Opportunity; The Innovation Process; Innovative Strategies; Entrepreneurial Motivation; Entrepreneurs versus inventors; Ethics and International Entrepreneurship; Strategic Issues in International Entrepreneurship; Problem solving Innovation and Diversification

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Demonstrate the principles of innovation process for establishing Industrial ventures.
- CO2.** Identify and analyze the gaps in an organization for innovation in the context of developed economies
- CO3.** Develop a comprehensive and well-planned business structure for a new venture.
- CO4.** Demonstrate knowledge on intellectual property rights, patents, trade marks, copy rights, trade secrets and commercialization of intellectual property.
- CO5.** Apply ethics in constructive innovation framework and problem solving.

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module1: CREATIVITY AND INNOVATION

(09 Periods)

Introduction, Levels of innovation, Purposeful innovation and the sources of innovative opportunity, The innovation process, Innovative strategies, Strategies that aim at introducing innovation, Dynamics of ideation and creativity-Inbound, Outbound; Context and process of new product development, Theories of outsourcing.

Module2: PARADIGMS OF INNOVATION**(09 Periods)**

Systems approach to innovation, Innovation in the context of developed economies and Emerging economies, Examining reverse innovation and its application, Performance gap, Infrastructure gap, Sustainability gap, Regulatory gap, Preference gap, organizational factors effecting innovation at firm level.

Module3: SOURCES OF FINANCE AND VENTURE CAPITAL**(09 Periods)**

Importance of finance, Comparison of venture capital with conventional development capital, Strategies of venture funding, Investment phases, Investment process, Advantages and disadvantages of venture capital, Venture capital developments in India.

Module4: INTELLECTUAL PROPERTY INNOVATION AND ENTREPRENEURSHIP**(09 Periods)**

Introduction to Entrepreneurship, Evolution of entrepreneurship from economic theory, Managerial and entrepreneurial competencies, Entrepreneurial growth and development, Concepts, Ethics and Nature of International Entrepreneurship, Intellectual property – forms of IP, Patents, Trademarks, Design registration, Copy rights, Geographical indications, Patent process in India.

Module5: OPEN INNOVATION FRAMEWORK & PROBLEM SOLVING**(09 Periods)**

Concept of open innovation approach, Difference between open innovations and Closed innovation approaches, Limitations and Opportunities of open innovation framework, Global context of strategic alliance, Role of strategic alliance, Problem Identification and Problem Solving, Innovation and Diversification

Total Periods: 45**EXPERIENTIAL LEARNING**

1. Identify the Innovative Marketing Strategies for Startups
2. Identify the Coca-cola Company Intellectual Property Rights

(Note: It's an indicative one. Course instructor may change the activities and the same shall be reflected in course handout)

CASE STUDIES/ARTICLES:

Contemporary relevant case studies/Articles will be provided by the course instructor at the beginning.

1. Tesla Inc.: Disrupting the Automobile Industry
This case study examines how Tesla Inc. disrupted the traditional automobile industry through its innovative electric vehicles and sustainable energy solutions. It discusses the sources of innovative opportunity that Tesla leverages, the ideation and creativity dynamics involved in new product development, and the strategies that the company uses to introduce and market its innovations.
2. Google Inc.: Innovation in Developed Economies
This case study explores how Google Inc. became a global leader in the technology industry through its innovative search engine, advertising, and cloud computing solutions. It highlights the performance gap that Google addressed, the regulatory and sustainability gaps that it leveraged, and the impact of its innovation strategies on the company's growth and profitability.

3. Flipkart: From Startup to Unicorn

This case study examines how Flipkart, an Indian e-commerce company, secured venture capital funding to become one of the largest online market places in India. It discusses the importance of finance in entrepreneurship, the advantages and disadvantages of venture capital, and the strategies that Flipkart used to attract venture funding.

4. Patanjali Ayurved: Building a Brand through Intellectual Property

This case study explores how Patanjali Ayurved, an Indian consumer goods company, built a strong brand through its intellectual property strategies. It discusses the forms of IP that Patanjali leverages, the patent process in India, and the impact of IP on the company's growth and profitability.

5. Procter & Gamble: Innovation through Open Innovation

This case study analyzes how Procter & Gamble, a global consumer goods company, leveraged open innovation to achieve unprecedented success in product development and marketing. It discusses the difference between open and closed innovation approaches, the limitations and opportunities of open innovation, and the role of strategic alliances in global innovation.

Co-Requisite -		

COURSE DESCRIPTION: Materials Structure and Constitution of Alloys; Heat treatment of steels; Properties of ferrous materials and its alloys; Properties of non-ferrous materials and its alloys; Properties and applications of Ceramics, Polymers and Composite materials.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Ability to understand and apply the principles of materials science to analyze and design materials for specific applications.
- CO2.** Analyze the properties of materials and enhance the same through heat-treatment processes.
- CO3.** Demonstrate the knowledge of ferrous and Non-ferrous materials and its alloys for engineering applications.
- CO4.** Understand the relationship between materials properties and structure at the atomic and molecular level.
- CO5.** Demonstrate the knowledge of Ceramics, Polymers, and Composite materials for suitable engineering applications.

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module1: MATERIALS STRUCTURE AND CONSTITUTION OF ALLOYS **(09 Periods)**

Materials Structure: Space lattice, Unit cells and Metallic crystal structures (SC, BCC, FCC and HCP), Crystal defects: Point, Line, Interstitial and Volume, Primary and secondary bonding in materials.

Constitution of Alloys: Necessity of Alloying, Gibbs's phase and Hume-Rothery rule, Iron-iron-carbide diagram and its micro structural aspects.

Module2: HEAT TREATMENT OF STEELS **(09 Periods)**

Annealing, Normalizing, Tempering, Carburization and Hardening- Austempering, Martempering, Carburizing, Nitriding, Cyaniding, Carbo-Nitriding, Flame and Induction Hardening, Vacuum and Plasma Hardening, Time-Temperature-Transformation Diagrams and Continuous Cooling Transformation Diagrams.

Module3: FERROUS MATERIALS AND ALLOYS**(09 Periods)**

Steels:Structure, properties, classifications and applications of plain steels,Specifications of steels, Structure, properties, classifications and applications of lowalloy steels,Hadfield manganese steels,Stainless steel and Tool steels.

Castiron:Structure,properties and applications of Gray castiron,White castiron, Malleable castiron,Nodular castiron and Alloy castiron.

Module4: NON-FERROUS MATERIALS AND ALLOYS**(09 Periods)**

Structure,properties and applications of Copper and its alloys,Aluminium and its alloys, Titanium and its alloys,Nickel and its alloys,Magnesium and its alloys,Refractory and Precious metals.

Module5: CERAMICS,POLYMERS AND COMPOSITES MATERIALS (09 Periods)

Ceramics: Classifications, Properties and Applications, Glass-ceramics, Polymers:

Classification,Propertiesand Applications,Polymerization Reaction,

Composites:Classifications,Properties and Applications of Polymer matrix composites, Ceramic matrix composites, Metal matrix composites and Nano composites.

Total Periods:45**EXPERIENTIAL LEARNING**

1. Laboratory experiments allow students to apply theoretical concepts and learn how to conduct experiments safely and effectively. Some examples of laboratory experiments include mechanical testing of materials, heat treatment of metals, and micro copy analysis of materials.
2. Materials characterization techniques such as X-ray diffraction, scanning electron micro copy,and transmission electron micro copy can provide evaluable insights into The structure and properties of materials. Students can gain hands-on experience with these techniques by conducting experiments and analyzing the results.

(Note:It's an indicative one.Course instructor may change the activities and the same shall be reflected in course handout)

COURSE CONTENT

Module1: SELF-ESTEEM&SELF-IMPROVEMENT

(09 Periods)

Know Yourself–Accept Yourself; Self-Improvement: Plan to Improve-Actively Working to Improve Yourself-Exercises-casestudies

Module2: DEVELOPING POSITIVE ATTITUDES**(09 Periods)**

How Attitudes Develop–Attitudes are Catching–Improve Your Attitudes–Exercises–case studies

Module3 SELF-MOTIVATION&SELF-MANAGEMENT**(09 Periods)**

Show Initiative–Be Responsible Self-Management; Efficient Work Habits–Stress Management–Employers Want People Who can Think–Thinking Strategies–Exercises–case studies

Module4 GETTING ALONG WITH THE SUPERVISOR**(09 Periods)**

Know your Supervisor–Communicating with your Supervisor–Special Communication with your Supervisor–What Should you Expect of Your Supervisor?–What your Supervisor expects of you–Moving Ahead Getting Along with your Supervisor–Exercises–case studies

Module5 WORK PLACE SUCCESS**(09 Periods)**

First Day on the Job–Keeping Your Job–Planning Your Career–Moving Ahead–Exercises–case studies

Total Periods:45**EXPERIENTIAL LEARNING**

1. List out the self-improvements in you on the charts and explain in detail.
2. Discuss different famous personalities and their attitudes.
3. Describe different personalities with respect to self-motivation and self-management.
4. Imagine you are a supervisor and illustrate different special communications.
5. Assume and Interpret different experiences on the first day of your job.

22LG101702	QUANTITATIVE APTITUDE AND VERBAL ABILITY	3	-	-	-	3
Pre-Requisite	-					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION: This course explores essential quantitative, verbal, and analytical reasoning skills for competitive exams and placements. It covers arithmetic, algebra, geometry, data interpretation, probability, and logical problem-solving. Verbal modules focus on grammar, vocabulary, reading comprehension, and critical reasoning techniques.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1. Demonstrate knowledge of number systems, percentages, ratios, and averages to solve real-time quantitative problems.**
- CO2. Apply algebraic techniques, progressions, and geometric concepts to compute and analyze mathematical scenarios.**
- CO3. Utilize combinatorics, probability, and data interpretation for decision-making under constraints.**
- CO4. Apply core grammar rules, sentence structures, reading comprehension, and critical reasoning techniques to communicate effectively.**

COURSE CONTENT

Module 1: NUMBER SYSTEMS, PERCENTAGES, RATIOS & AVERAGES (9 Periods)

Number system, power cycle, remainder cycle, factors, multiples, HCF, LCM, Percentages, fraction-to-decimal conversions, increase/decrease calculations, simple and compound interest, Ratio, proportion, variation, problems on ages, profit and loss vocabulary, partnership, cost/selling price, Averages, weighted averages, mixtures and alligations.

Module 2: ALGEBRA, PROGRESSIONS, GEOMETRY (9 Periods)

Logarithms, rules and simplifications, solving quadratic equations, Arithmetic and geometric progressions, nth term, sum formulas, Geometry and mensuration, triangles, circles, area, perimeter, volume, surface area, Time and work, efficiencies, pipes and cisterns, division of wages, Speed, distance, relative motion, trains, boats and streams, races.

Module 3: COMBINATORICS, PROBABILITY, AND DATA INTERPRETATION (9 Periods)

Permutation and combination, counting principles, factorials, arrangements, selections, Probability concepts, events, rules of probability, real-life applications, Data interpretation from tables, pie charts, bar graphs, Data sufficiency techniques, evaluating adequacy of given data, Basic logical reasoning within quantitative problem-solving.

Module 4: CORE VERBAL GRAMMAR AND SENTENCE STRUCTURE (9 Periods)

Sentence correction, subject-verb agreement, modifiers, parallelism, tenses, comparisons, Articles and prepositions, omission rules, compound structures, interrogatives, Active and passive voice, direct and indirect speech rules, Sentence completion, para-jumbles, context clues, logical connectors, Vocabulary building, synonyms, antonyms, word usage, analogies.

Module 5: READING COMPREHENSION AND CRITICAL REASONING (9 Periods)

Reading comprehension types, speed reading, tone/inference-based questions, Critical reasoning – arguments, assumptions, conclusions, strengthen/weaken/inference, Word roots, prefixes, suffixes, sentence structure clues, Logical structuring of arguments, spotting fallacies, Application of reasoning in RCs, data-based questions, verbal puzzles.

Total Periods: 45

EXPERIENTIAL LEARNING

1) NUMBER SYSTEMS, PERCENTAGES, RATIOS & AVERAGES

A trader has 3 varieties of rice 13529 kg, 9617 kg, 7987 kg by weights. Find the minimum number of bags of equal size in which he can store the rice without mixing.

- a) 163
- b) 191
- c) 246
- d) 212

2) NUMBER SYSTEMS, PERCENTAGES, RATIOS & AVERAGES

The ratio of the ages of A and B is 3:4. After 5 years, the ratio becomes 4:5. What are their present ages?

- a) 15 and 20
- b) 18 and 24
- c) 30 and 40
- d) 20 and 25

3) ALGEBRA, PROGRESSIONS, GEOMETRY

Solve for x:

If $2x + 3 = 7$, then what is the value of x?

- a) 1
- b) 2
- c) 3
- d) 4

4) ALGEBRA, PROGRESSIONS, GEOMETRY

The perimeter of a rectangle is 36 cm. If the length is 10 cm, what is the width?

- a) 8 cm
- b) 9 cm
- c) 6 cm
- d) 7 cm

5) **COMBINATORICS, PROBABILITY, AND DATA INTERPRETATION**

A card is drawn at random from a standard deck of 52 playing cards. What is the probability that it is a red king?

- a) $1/13$
- b) $1/26$
- c) $1/52$
- d) $2/13$

6) **COMBINATORICS, PROBABILITY, AND DATA INTERPRETATION**

The number of students in five different classes is as follows:

Class A – 40, Class B – 35, Class C – 50, Class D – 45, Class E – 30.

What is the average number of students per class?

- a) 38
- b) 40
- c) 42
- d) 45

7) **CORE VERBAL GRAMMAR AND SENTENCE STRUCTURE**

Identify the grammatically correct sentence:

- a) He go to the gym every morning.
- b) He goes to the gym every morning.
- c) He going to the gym every morning.
- d) He gone to the gym every morning.

8) **CORE VERBAL GRAMMAR AND SENTENCE STRUCTURE**

Despite the heavy rain, the match _____.

- a) has cancel
- b) was cancelled
- c) will be cancelled
- d) continued as scheduled

9) **READING COMPREHENSION AND CRITICAL REASONING**

Passage:

The Earth's climate has changed throughout history. However, the current trend of global warming is particularly alarming because it is occurring at an unprecedented rate. Scientists overwhelmingly agree that human activities, especially the burning of fossil fuels, are the primary cause of this rapid change.

According to the passage, what is the main cause of current global warming?

- a) Natural changes in the climate
- b) Increase in solar activity
- c) Volcanic eruptions
- d) Human activities like burning fossil fuels

10) **READING COMPREHENSION AND CRITICAL REASONING**

A new study shows that students who take handwritten notes retain more information than those who type notes. Therefore, schools should ban laptops during lectures to improve student learning.

Which of the following, if true, most seriously weakens the argument?

- a) Many students find typing faster than writing by hand.
- b) Some students need laptops to access course materials.
- c) The study did not account for the difficulty level of the lectures.
- d) The students who typed their notes reviewed them more often than those who wrote by hand.

UNIVERSITY ELECTIVE

Course Code	Course Title	L	T	P	S	C
22LG101703	LOGICAL REASONING AND RECRUITMENT ESSENTIALS	3	-	-	-	3
Pre-Requisite	-					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION: This course develops essential logical reasoning, analytical skills, and practical communication for competitive exams and placements. It covers data arrangements, coding-decoding, pattern recognition, counting principles, probability, and data interpretation. Learners also acquire skills in logical connectives, syllogisms, time and direction sense, along with group discussions, resume writing, and interview preparation.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1. Apply concepts of data arrangements, blood relations, ranking, and direction sense to solve spatial and logical reasoning problems.**
- CO2. Analyze patterns in coding-decoding, series, analogies, odd-one-out, and visual reasoning to improve abstraction and recognition skills.**
- CO3.** Apply principles of combinatorics, probability, data interpretation, logical connectives, syllogistic reasoning, and time-space analysis to construct effective solutions and derive valid conclusions.
- CO4.** Demonstrate effective communication skills in group discussions, resume writing, and personal interviews through structured activities.

CO-PO-PSO Mapping Table:

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	-	-	2	-	-	-	-	-	-	-

CO4	3	2	-	-	2	-	-	-	-	3	-	-
Course Correlation Mapping	3	2	2	3	2	-	-	-	-	3	-	-

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1: DATA ARRANGEMENTS AND BLOOD RELATIONS (8 Periods)

Linear arrangement, circular arrangement, multi-dimensional arrangement, coded and descriptive blood relations, family trees, ranking, and ordering problems. Focus on directional logic, positional comparisons, and attribute-based placement. Enhances spatial reasoning and logical deduction skills.

Module 2: CODING-DECODING, SERIES, ANALOGY, ODD ONE OUT & VISUAL REASONING (8 Periods)

Letter coding, number coding, substitution patterns, alphanumeric series, analogy-based

reasoning, identifying odd one out in sequences, visual reasoning including mirror images, paper folding, figure sequences. Builds pattern recognition and abstraction abilities.

Module 3: COUNTING PRINCIPLES, P&C, PROBABILITY, DATA INTERPRETATION & SUFFICIENCY (9 Periods)

Fundamental counting principle, permutation and combination, probability theory and applications, interpreting pie charts, tables, and bar graphs, data sufficiency problems requiring logical assessment of given facts. Develops analytical thinking and quantitative aptitude.

Module 4: LOGICAL CONNECTIVES, SYLLOGISMS, VENN DIAGRAMS, CLOCKS, CALENDARS & DIRECTION (8 Periods)

IF-THEN logic, syllogistic reasoning with Venn diagrams, calendar-based date/day calculations, clock-angle problems, direction sense and cube-based spatial puzzles. Trains logical sequencing and time-space orientation.

Module 5: RECRUITMENT ESSENTIALS – GD, RESUME & INTERVIEW SKILLS (12 Periods)

Basics of group discussion, resume writing guidelines, and key sections, personal interview structure, HR and technical questions, body language tips, mock GD and interview sessions for real-time practice and evaluation. Equips students with communication and interview readiness.

Total Periods: 45

EXPERIENTIAL LEARNING

LIST OF EXERCISES:

1) DATA ARRANGEMENTS AND BLOOD RELATIONS

Six people – A, B, C, D, E, and F – are sitting in a row, facing north.

- B is sitting to the immediate right of D.
- C is at one of the ends.
- A is sitting between E and F.
- D is not at either end.
- E is sitting to the left of A.

Who is sitting in the middle?

Options:

- A) A
- B) B
- C) D
- D) F

2) DATA ARRANGEMENTS AND BLOOD RELATIONS

Pointing to a man, Mira says, "He is the son of my mother's only daughter."
How is the man related to Mira?

Options:

- A) Son
- B) Nephew
- C) Cousin
- D) Brother

3) CODING-DECODING, SERIES, ANALOGY, ODD ONE OUT & VISUAL REASONING

In a certain code language, **GAMES** is written as **HZNFT**.

How is **PLANE** written in that code?

Options:

- A) QMBOF
- B) QMBOD

- C) QNCOD
- D) OKZMD

- 4) **CODING-DECODING, SERIES, ANALOGY, ODD ONE OUT & VISUAL REASONING**
Which word does **not** belong to the group?

Options:

- A) Apple
- B) Mango
- C) Banana
- D) Carrot

- 5) **COUNTING PRINCIPLES, P&C, PROBABILITY, DATA INTERPRETATION & SUFFICIENCY**

If the sales of Company A in 2021 were 80 units and in 2022 were 120 units, what was the percentage increase?

Options:

- A) 33.3%
- B) 50%
- C) 40%
- D) 60%

- 6) **COUNTING PRINCIPLES, P&C, PROBABILITY, DATA INTERPRETATION & SUFFICIENCY**

The number of students in five different classes is as follows:

Class A – 40, Class B – 35, Class C – 50, Class D – 45, Class E – 30.

What is the value of x?

Statement I: $x^2 = 49$

Statement II: x is a negative number

- A) Only I is sufficient
- B) Only II is sufficient
- C) Both I and II together are sufficient
- D) Each alone is sufficient

- 7) **LOGICAL CONNECTIVES, SYLLOGISMS, VENN DIAGRAMS, CLOCKS, CALENDARS & DIRECTION**

Statements:

1. All engineers are logical.
2. Some logical people are creative.
3. No creative person is careless.

Conclusion:

I. Some engineers are creative.

II. No engineer is careless.

Choose the correct option:

- A) Only I follows
- B) Only II follows
- C) Neither I nor II follows
- D) Both I and II follow

- 8) **LOGICAL CONNECTIVES, SYLLOGISMS, VENN DIAGRAMS, CLOCKS, CALENDARS & DIRECTION**

Ravi starts from his home at 3:00 PM and walks 4 km East, then turns left and walks 3 km. He then turns left again and walks 4 km. What direction is he facing, and what time will it be if each km takes him 15 minutes?

- A) Facing North, 3:45 PM
- B) Facing West, 4:00 PM
- C) Facing South, 4:00 PM
- D) Facing West, 3:45 PM

- 9) **RECRUITMENT ESSENTIALS – GD, RESUME & INTERVIEW SKILLS**

Improves Communication Skills – Students learn to express their thoughts clearly

and confidently in a group setting.

Builds Critical Thinking – It enhances analytical skills by encouraging students to think on their feet, structure arguments, and respond to different viewpoints.

Boosts Teamwork & Listening Skills – GD teaches the importance of active listening, respecting others' opinions, and working collaboratively, which are essential in professional environments.

10) RECRUITMENT ESSENTIALS – GD, RESUME & INTERVIEW SKILLS

Boosts Confidence – Simulated interviews reduce anxiety and prepare students to face real interviews with ease.

Improves Self-Presentation – Students learn how to present their strengths, goals, and experiences effectively.

Provides Constructive Feedback – Personalized feedback helps identify areas for improvement in communication, attitude, and body language.

UNIVERSITY ELECTIVE

Course Code	Course Title	L T P S C
22CE101703	PLANNING FOR SUSTAINABLE DEVELOPMENT	3 - - - 3

Pre-Requisite -

Anti-Requisite -

Co-Requisite -

COURSE DESCRIPTION: This course provides a detailed discussion on sustainable development, environmental impact, sustainable policies, governance, theories and strategies, media and education for sustainability.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- C01** Compare sustainable development theories in national and global context to protect the society and environment.
- C02** Analyze the unforeseen environmental impacts on sustainable development to protect the society and environment.
- C03** Analyze policies and governance for sustainable development considering ethics, economics, society and environment.
- C04** Analyze systems and strategies for sustainable development using appropriate tools and techniques considering ethics, economics, society and environment.
- C05** Analyze the role of media and education in sustainable development using appropriate tools and techniques considering ethics, society and environment besides communicating effectively.

Course Correlation Mapping	3	3	-	-	2	2	2	2	-	1	1	1

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module1: SUSTAINABLE DEVELOPMENT

(09 Periods)

Definition and concepts of sustainable development, Capitalization of sustainability- National and global context; Sustainable development goals, Emergence and evolution of sustainability and sustainable development, Theories of sustainability, Casestudies.

Module2: ENVIRONMENTAL IMPACT

(09 Periods)

Climate change–Science, Knowledge and sustainability; Unforeseen environmental impacts on development, Challenges of sustainable development, Centrality of resources in sustainable development, Casestudies.

Module3: SUSTAINABLE POLICIES AND GOVERNANCE

(09 Periods)

Governance–Democracy and Eco–welfare; Global civil society and world civil politics, Civic environmentalism, Policy responses to sustainable development, Economics of sustainability, Social responsibility insustainability, National action, ISO14001: Environmental management system.

Module4: SUSTAINABLE SYSTEMS AND STRATAGIES

(09 Periods)

Need for system innovation, Transition and co–evolution, Theories and methods for sustainable development, Strategies for eco–innovation, Ecological foot print analysis, Socio ecological indicators–Eco labels; Policy programmes for system innovation, Case studies.

Module5: MEDIA AND EDUCATION FOR SUSTAINABILITY

(09 Periods)

Role of emerging media, Remarkable design and communication art, Activism and the public interest, Education for sustainability, Participation indecision making, Critical thinking and reflection, Casestudies.

Total Periods:45

EXPERIENTIAL LEARNING

1. Submit a study report on the importance and implementation of United Nationals sustainable goals 17 among all the ratified nations.
2. Submit a study report on any one casestudy that the challenges being faced during the sustainable development goals implementation.
3. Submit a study report on the social responsibility in implementation of sustainability concept.
4. Prepare and submit a report on any two casestudies that how the eco labels put on their products shall make the consumers feel satisfaction over the sustainable development.
5. Submit a report on the communication art and activism through media which makes the public interest that helps to contribute towards sustainable development.

COURSE DESCRIPTION: Fundamentals of Communications; Analog and digital-modulation and Demodulation Techniques; Information theory and coding.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Analyze different Analog and Digital Modulation Schemes to improve band width and power efficiency.
- CO2.** Analyze Pulse Analog modulation Schemes.
- CO3.** Understand the concepts of Base band & Pass band Digital Transmission.
- CO4.** Analyze various error detection and correction codes for reliable transmission.

Course Correlation Mapping	3	3	2	1	-	-	-	-	-	-	-	-

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module1: ANALOG MODULATION

(13 Periods)

Block diagram of Electrical Communication System, Types of Communications, Need for Modulation, Types of Amplitude Modulation-AM, DSBSC, SSBSC, Power and BW requirements, Generation of AM, DSBSC, SSBSC. Detection of AM-Diode detector, Product demodulation for DSBSC & SSBSC. Frequency & Phase Modulations.

Module2: PULSE MODULATION**(07 Periods)**

Elements&Advantages of Digital communication systems,PAM, Regeneration of Base band Signal,PWM and PPM,Time Division Multiplexing,Frequency Division Multiplexing.

Module3: BASE BAND DIGITAL TRANSMISSION**(07 Periods)**

Pulse Code Modulation-Advantages,Block diagram of PCM,Quantization,effect of Quantization,Quantization error.DM,ADM and Comparis on of PCM,DM&ADM.

Module4: PASS BAND DIGITAL TRANSMISSION**(10 Periods)**

Digital Binary Schemes-ASK,FSK,PSK,DPSK,QPSK,Modulation and Demodulation-Coherent and Non-coherent techniques.

Module5: INFORMATION THEORY AND CODING**(08 Periods)**

Concept of Information,Entropy and Rate of Information,Coding efficiency,Shannon-Fano and Huffman Coding.

Error Correction and Detection Codes-Linear Block Codes,Cyclic Codes,Convolution Codes.

Total Periods:45**EXPERIENTIAL LEARNING**

- 1 Suppose that an on-linear device is available for which the output current i_0 and the input voltage v_i are related by: $i_0(t) = a_1 v_i(t) + a_3 v_i^3(t)$ where a_1 and a_3 are constants. Explain how this device may be used to provide (a) a product modulator (b) an amplitude modulator.
- 2 A voice signal occupying the frequency band 0.3-3.4 KHz is to be modulated on to a carrier wave of frequency 11.6 MHz. Highpass filters such as the one shown below are available. Design a system to generate the USB wave using DSB modulators and these filters.

- 3 In a binary PCM system, the output signal to-quantizing noise ratio is to be held to a minimum of 40dB. Determine the number of required levels, and find the corresponding output signal to quantizing-noise ratio.
- 4 A bipolar binary signal $S_1(t)$ is a +1V or -1V pulse during the interval (0,T). Additive white noise with power spectral density $\eta/2 = 10^{-5}$ W/Hz. W/Hz is added to the signal. Determine the maximum bit rate that can be sent with a bit error probability of $P_e \leq 10^{-7}$.
- 5 A compact disc (CD) recording system samples each of two stereo signals with a 16-bit analog-to digital converter (ADC) at 44.1 kb/s.
 - a) Determine the output signal-to-quantizing-noise ratio for a full-scale sinusoid.
 - b) The bit Stream of digitized data is augmented by the addition of error-correcting bits, clock extraction bits, and display and control bit fields. These additional bits represent 100 per cent overhead. Determine the output bit rate of the CD recording system.
 - c) The CD can record an hour's worth of music. Determine the number of bits recorded on a CD. For a comparison, a high-grade collegiate dictionary may contain 1500 pages, 2 columns per page, 100 lines per column, 8 words per line, 6 letters per word, and 7 bits per letter on average. Determine the number

(Note: It's an indicative one. The course instructor may change the activities and the same shall be reflected in course handout.)

UNIVERSITY ELECTIVE

Course Code	Course Title	L T P S C
22EE101702	RELIABILITY ANDSAFETY ENGINEERING	3 - - - 3
Pre-Requisite	-	
Anti-Requisite	-	
Co-Requisite	-	

COURSE DESCRIPTION: This course provides a detailed discussion on the fundamentals of reliability and safety engineering. The course emphasizes on various reliability measures used in assessing the performance of the system, evaluating the critical parameters of the network, and the techniques to assess the reliability of the system. The course also deals with safety management and measures in industrial and other hazardous environments.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Apply the various probability and statistics fundamentals into engineering systems to evaluate performance.
- CO2.** Develop mathematical models for engineering networks/systems to evaluate the critical parameters for the reliability of a network/system.
- CO3.** Analyze the time-dependent/independent characteristics of a repairable system and frequency durations techniques to assess the reliability
- CO4.** Understand various safety management, policy, and planning strategies for personal and industrial safety.
- CO5.** Understand various safety and hazard identification techniques and follow appropriate safety measures in industry and society.

CO-PO Mapping Table

Course Outcome	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	-	-	2	1	1	1	-	-	-	-

CO5	3	2	-	-	2	1	1	1	-	-	-	-
Course Correlation Level	3	2	--	2	2	1	1	1	--	--	--	3

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module1: FUNDAMENTALS OF RELIABILITY ENGINEERING (09 Periods)

Random variables, probability concepts, rules for probabilities of events. Probability density and distribution functions. Binomial distribution-Expected value and standard deviation for binomial distribution. Reliability functions, $f(t)$, $F(t)$, $h(t)$ -Relationship between these functions, Exponential density and distribution functions, expected value and standard deviation of exponential distribution. Measures of reliability-MTTF, MTTR, MTBF. Bathtub curve.

Module2: NETWORK MODELING AND RELIABILITY EVALUATION**(09 Periods)**

Basic concepts-Evaluation of network reliability/unreliability, series systems, parallel systems, series-Parallel configuration systems. Redundant systems and its types. Evaluation of network reliability/unreliability using conditional probability method, tie-set and cut-set based approach, complete event tree and reduced event tree methods.

Module3: MARKOV CHAIN AND MARKOV PROCESSES**(09 Periods)**

Basic concepts, stochastic transitional Probability matrix, time dependent probability evaluation, Limiting State Probability, Absorbing states. Modelling concepts-State space diagrams, time dependent reliability evaluation of single component repairable model, two component repairable model. Frequency and duration techniques.

Module4: BASICS OF SAFETY CONCEPTS**(08 Periods)**

Introduction, goals, need for safety, history of safety movement-the evolution of modern safety concept, general concepts of safety management. Planning for safety-productivity, quality and safety, line and staff functions, budgeting for safety, safety policy.

Module5: SAFETY TECHNIQUES AND APPLICATIONS**(10 Periods)**

Introduction to safety techniques, Incident Recall Technique (IRT), disaster control, job safety analysis, safety survey, safety inspection, safety sampling, evaluation of the performance of supervisors on safety. Hazard identification techniques, components of safety audit, types of audit, audit methodology, and process of safety reporting. Applications of industrial Safety, environmental safety, health safety, electrical safety, fire safety.

Total Periods:45**EXPERIENTIAL LEARNING**

1. The students shall understand various IEEE reliability standards to be followed in the engineering systems for the evaluation of reliability and assess performance.
2. Should collect various engineering components assembled and their network models for evaluations of network reliability indices.
3. The students to visit a near by power or process industry to know about various types of failures and repair performance of various engineering components and cause of replacements.
4. Should collect information about various safety/alert sign boards and the relative measures for a particular situation.
5. Should understand the standard practices followed during the maintenance/commissioning of the electrical apparatus in any industry following the various safety precautions.

(Note: It's an indicative one. The course instructor may change the activities and the same shall be reflected in course handout.)

COURSE CONTENT

Module1: PHOTO GRAMMETRY AND REMOTE SENSING

(10 Periods)

Photo grammetry: Principle of photo grammetry, Types of aerial photo graphs, Planning and execution of photo graphic flights, Geometry of aerial photo graphs, Scale of aerial photo graphs and its determination, Stereo scopy, Ground control, Mosaics, Parallax measurements for height determinations, Latest developments in photo grammetry.

Remote Sensing: Elements of remote sensing, Electro magnetic spectrum, Energy resources, Physics of radiant energy, Energy interactions with earth surface features and atmosphere, Data acquisition platforms Spectral reflectance curves, Resolution; Spectral properties of water bodies, soil and vegetation; Sensors and platforms, Visual interpretation techniques.

Module2: GEOGRAPHIC INFORMATION SYSTEM

(09 Periods)

GIS categories, Components of GIS, Fundamental operations of GIS, Spatial and non spatial data, Raster data and vector data, File management, Layer based GIS, Feature based GIS, Map projections, Latest developments.

Module3: GIS SPATIAL ANALYSIS

(08 Periods)

Database models, Data storage, Vector data storage, Attributed data storage, Data manipulation and analysis, Integrated analysis of the spatial and attributed data - DTM/DEM, Softwares - ArcGIS, QGIS and Global mapper, Latest developments in GIS software.

Module4: REMOTE SENSING AND GIS APPLICATIONS

(09 Periods)

Land use/Land cover classification, Rainfall-run off studies, Flood and drought impact assessment and monitoring, Drainage morphometry, Watershed management for sustainable development, GIS based precision farming, GIS based natural resources management, Inland water quality survey and management, Regional and urban planning and management, GIS based high way alignment, GIS based traffic congestion analysis, GIS for public health - Case Studies.

Module5: GLOBAL POSITIONING SYSTEM

(09 Periods)

Global Positioning System (GPS) - Fundamental concepts, Components of GPS - Space segment, Control segment, User segment, Reference systems, Satellite orbits; Classification of GPS receivers, GPS observations, GPS measurements and accuracy of GPS, Applications.

Total Periods: 45

EXPERIENTIAL LEARNING

1. Sound composing project: In this assignment, Select area and collect the geometry of aerial photo graphs and analyze the views.
2. Visit any meteorological department and understand about rain gauges and collect, analyse the data
3. Visit Geographical Information Systems Laboratory and understand about GIS and GPS Systems

(Note: It's an indicative one. The course instructor may change the activities and the same shall be reflected in course handout.)

UNIVERSITY ELECTIVE

Course Code	Course Title	L T P S C
22CE101705	SMART CITIES	3 - - - 3

Pre-Requisite -

COURSE DESCRIPTION: This course provides a discussion on smartcity and infrastructure, smart governance, smart mobility,smart economy,smart environment, smart buildings,smart energy,smart water,smart living,smart people and casestudies.

COURSE OUTCOMES:After successful completion of the course, students will be able to:

- CO1** Understand the concept of smart cities and its infrastructure for ensuring safety and sustainability using appropriate techniques and management principles in India besides life long learning.
- CO2** Analyse smart cities to solve problems associated with mobility and governance for the growing population by ensuring safety and sustainability, management using appropriate standards in India besides life long learning.
- CO3** Analyse smart cities to solve problems associated with economy and environment for ensuring safety and sustainability,management using appropriate techniques and standards in India besides life long learning.
- CO4** Analyse buildings,energy and water resource systems in smart cities to solve problems associated with the growing population for ensuring safety and sustainability, management using appropriate standards in India besides life long learning.
- CO5** Analyse the smart cities to solve complex problems associated with people and living systems for ensuring safety and sustainability, management using Appropria tetechniques in India besides life long learning.

CorrelationLevels: 3:High; 2: Medium; 1:Low

COURSE CONTENT

Module1: SMARTCITY AND INFRASTRUCTURE

(09 Periods)

Smartcity-Concept, Objectives, History, Need; Key trends in smartcity development, Government of India-Policy for smartcity.

Infrastructure: Smartcity infrastructure-Components, Challenges; Managing-Principles take holders, Infrastructure in India and World, Dimensions of smartcities, Global standards and performance benchmarks, Practice codes, Infrastructure development, Integrated infrastructure management systems for smartcity, Infrastructure management system applications for existing smartcity, Various types of infrastructure systems, Infrastructure assessment.

Module2: SMART GOVERNANCE AND SMART MOBILITY

(09 Periods)

Smart Governance: Definition, smart governance to citizens, Industries and commerce, Smart governance within government, Emerging trends in smart governance, Future of smart governance, Guidelines and standards for smart governance; IoT and ICT Application-Broad band city, Use of sensors, Intelligent city governance.

Smart Mobility: Intelligent transportation systems, Accessibility, Smart vehicles and fuels, GIS, GPS, Navigation system, Public transport, Traffic safety management, Logistics flows in cities, Mobility services, E-ticketing.

Module3: SMART ECONOMY AND SMART ENVIRONMENT

(09 Periods)

Smart Economy: City branding, Market places and crowd funding, Innovation, entrepreneurship -E-business, E-commerce, Online integrated business platforms and networks; Local and global inter connectedness, Productivity, Flexibility of labour market.

Smart Environment: Network and environmental monitoring, Energy efficiency, Urban planning and urban refurbishment, Smart buildings and building renovation, Resource management, Environmental protection.

Module4: SMART BUILDINGS, SMART ENERGY AND SMART WATER

(09 Periods)

Smart Buildings: Definition, Sustainable city-A green approach, Housing, Sustainable Green building-Solar energy for smartcity, Waste water management, solid waste management, 3Rs Policy, Green ratings.

Smart Energy: Current energy demand, Alternate energy sources, Renewable energy, Production, Solar energy, Wind energy, Energy from solid waste, Applications, Challenges in smart energy

Smart Water: Storage and conveyance system of water, Sustainable water and sanitation, Sewage systems, Flood management, Conservation system.

Module5: SMART LIVING, SMART PEOPLE AND CASE STUDIES

(09 Periods)

Smart Living: Definition, Cultural facilities, World-class education, Tourist attractions, World-class hospitals, Latest technologies, Quality housing, Community and urban life management, Social cohesion.

Smart People: Definition, Human development index, Level of qualification, Graduate Enrolment ratio, Lifelong learning, ICT Skills, Quality of smart people-Flexibility, Creativity to contribute to education, Democratic nature; Personality dimensions-Extroversion, Agreeableness, Consciousness, Emotional Stability, Open to experience.

Case Studies: Helsinki-Finland; Zurich-Switzerland and; Oslo-Norway; Amsterdam-The Netherlands; New York-United States; Seoul (World's first Smart City)-South Korea.

Total Periods: 45

EXPERIENTIAL LEARNING

LIST OF EXERCISES:

1. Prepare a report on smart city infrastructure for south Indian cities.
2. Prepare a review on need for changes in transportation and governing policies in India.
3. Write a report on energy conservation and economy stability in world's first smart city.
4. Write a report on need and technologies to be adopted for green buildings in a smart city.
5. Prepare a case study report on Hyderabad, Telangana.

(Note: It's an indicative one. The course instructor may change the activities and the same shall be reflected in course handout.)

**SMART SENSORS FOR
ENGINEERING APPLICATIONS**

3 - - - 3

Pre-Requisite -

Anti-Requisite -

Co-Requisite -

COURSE DESCRIPTION: This course provides a detailed discussion on Basics of sensors, characteristics of sensors and their responses; Smart sensors for Engineering, Science and Health Monitoring Applications; Applications of smart sensors and advancements in sensing Techniques.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

CO1. Analyse the characteristics of transducers and estimate the response of sensors.

CO2. Understanding the working of various sensors in the context of their specialised domains.

CO3. Apply smart sensors for real time applications.

CO4. Apply the advanced techniques to smart sensors to provide solution to real time applications.

CO-PO-PSO Mapping Table:

Course Correlation Mapping	3	3	-	-	-	-	-	-	-	-	-	-

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module1: CONCEPTS OF SENSORS

(08 Periods)

Introduction to sensors and transducers. Need for sensors in the modern world. Different fields of sensors based on the stimuli, various schematics for active and passive sensors. Static and dynamic characteristics of sensors. **zero, I and II order sensors:** Response to impulse, step, ramp and sinusoidal inputs. Environmental factors and reliability of sensors.

Module2: SENSORS IN ENGINEERING

(07 Periods)

Physical principles of sensors, Electric Sensors: Resistive, Capacitive, Inductive. Piezo electric sensor. Photo elastic sensors, Fluid Mechanic sensors.

Module3: HUMAN AND BIOMIMETIC SENSORS

(10 Periods)

Human sensors: vision, Taste and smell, Hearing, Somatic, Biomimetic Sensors, Electro chemical, Thermoelectric sensors, Optic sensors.

Module4: APPLICATIONS OF SMART SENSORS**(11 Periods)**

WSN Based Physiological Parameters Monitoring System: Measurement of Human Body Temperature. Intelligent Sensing System for Emotion Recognition: Aim of the Emotion Recognition System, Development of Intelligent Sensing System for Emotion Recognition. WSN Based Smart Power Monitoring System.

Module5: ADVANCEMENTS IN SENSING TECHNOLOGY**(09 Periods)**

Ecological Monitoring Using Wireless Sensor Networks: Overview, Challenges, and Opportunities. Development of an Embedded System-Based Gateway for Environmental Monitoring in Wild Fields. Advancements in Structural Health Monitoring.

Total Periods:45**EXPERIENTIAL LEARNING**

1. Build a wireless sensor system for Environmental pollution monitoring.
2. Design a smart temperature measurement system using required accessories.

(Note: It's an indicative one. The course instructor may change the activities and the same shall be reflected in course handout.)

Course Code	Course Title	L	T	P	S	C
22EE101703	SUSTAINABLE ENERGY SYSTEMS	3	-	-	-	3
Pre-Requisite	-					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION: This course designed emphasizes the operating principle of a range of non-conventional energy resources, energy harvesting and conversion principles and key performance characteristics. The energy conversion technologies will include energy conversion from Solar, Wind, Ocean, Biomass, Geo thermal and Fuel cells. The course also emphasizes on various types of hybrid energy storage systems with their relative advantages and disadvantages.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1** Understand the fundamental concepts of renewable energy sources and their endurance for sustainability.
- CO2** Understand the various methods of harvesting solar energy, energy conversion principles, and operational aspects and environmental impacts of solar technologies.
- CO3** Understand the various methods of harvesting wind energy, conversion principles, Operational aspects, and environmental impacts of wind energy systems.
- CO4** Understand the various methods of harvesting ocean energy, Biomass energy and geothermal energy, energy conversion technologies, operational aspects, and their impacts on the environment.
- CO5** Understand the principle of harvesting energy from fuel cells and the operational aspects of hybrid energy storage systems.

CO-PO Mapping Table:

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	-	-	-	-	2	2	-	-	-	-	1

CO5	3	-	-	-	2	2	2	-	-	-	-	1
Course Correlation Mapping	3	-	-	-	2	2	2	-	-	-	-	1

Correlation Levels: 3:High; 2:Medium; 1:Low

COURSE CONTENT

Module1: INTRODUCTION TO SUSTAINABLE ENERGY SOURCES (07 Periods)

Impact of conventional sources on Environment—acid rain, ozone layer depletion, Global warming, green house effect and nuclear waste; Limitation of fossil fuels; Renewable energy sources; Renewable sources and their sustainable development.

Module2: ENERGY FROM SOLAR (10 Periods)

Introduction, solar radiation, Measurement of solar radiation—Pyranometer; Solar energy collectors; Flat plate collectors—Liquid and air (non-porous) types; Focusing type—Parabolic and Point types; Solar photo voltaic system—PV cell and its types,

Configuration of solar panel,PV system;Applications:Solar pump,Solar water heater

Module3: ENERGY FROM WIND

(08 Periods)

Introduction, power extraction from the wind,Wind turbines—Horizontal axis wind turbine—Propeller type and Vertical axis wind turbine—Darrieus rotor type;Basic components of wind energy conversion systems, Applications: Energy storage,Water pumping;Environmental impacts.

Module4: ENERGY FROM OCEAN,BIOMASS AND GEOTHERMAL RESOURCES

(12 Periods)

Energy from ocean:Introduction, ocean thermal energy conversion(OTEC):Open and closed cycle power plants;Tidal energy: Schematic diagram of tidal power plant; Advantages and disadvantages.

Energy from Biomass:Introduction, biomass conversion technologies-direct, Thermo chemical and Biochemical conversions;Bio gas generation—Anaerobic digestion process.

Geothermal energy:Introduction,Geothermal resources,Geothermal powerplants—Vapour dominated and liquid dominated;Environmental issues.

Module5: FUEL CELLS AND HYBRID ENERGY SYSTEMS

(08 Periods)

Fuel Cells:Introduction,principle and operation of fuel cell, classification of fuel cells, advantages and disadvantages of fuel cells.

Hybrid energy systems:Need for hybrid systems, configuration and coordination, Block diagram approach of Stand-alone PV-wind system,PV-Diesel and Wind-diesel; energy storage systems—Ultra capacitors,SMES,Battery.

Total Periods:45

EXPERIENTIAL LEARNING

1. The students shall visit a solar power plant,understand the operational aspects and should prepare a technical report on the plant visited.
2. The students shall visit a wind farm,understand the operational aspects,and should prepare a technical report on the plant visited.
3. The students shall visit a bio-mass energy conversion plant,understand the operational aspects and should prepare a technical report on the plant visited.
4. The students shall prepare a technical report on the need of a hybrid plant and find new venues for a new hybrid system.

(Note:It's an indicative one.The course instructor may change the activities and the same shall be reflected in course handout.)

COURSE DESCRIPTION: This course is designed to introduce the student to the technologies and facilities of web design: CSS, java script, and jquery. Students will understand the web design process and use these of tware technologies to gether to produce web design projects.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1.** Understand the fundamentals of HTML5 and the principles of web design.
- CO2.** Construct basic website using HTML and Cascading Style Sheets.
- CO3.** Build dynamic web pages with validation using Java Script to bjects and by applying different event handling mechanisms.
- CO4.** Learn how to use HTML5 and other Web technologies to develop interactive and responsive web pages.

COURSE CONTENT

Module1: INTRODUCTION

(09 Periods)

Elements–Data types–Working with Text–Arranging Text–Displaying Lists–VAR Element–BDO Element–SPAN Element–DIV Element.

Module2: LINKS AND URLS

(09 Periods)

Hyperlinks–URLs–Linking to a Mail System–Creating Tables–Inserting Images in a Web Page–Colors–Form Elements–Multiple–Choice Elements– Multimedia

Module3: DYNAMICHTML**(09 Periods)**

Features of Java Script-Programming Fundamentals –Java Script Functions, Events, Image Maps, and Animations–JS Objects-Document Object-Validation, Errors, Debugging, Exception Handling, and Security

Module4: CASCADING STYLE SHEET**(09 Periods)**

CSS Syntax-CSS Selectors-Back grounds and Color Gradients-Fonts and Text Styles -Creating Boxes and Columns-Displaying,Positioning,and Floating an Element-Table Layouts-:Effects,Frames,and Controls in CSS

Module5: ADVANCED FEATURES OF HTML5**(09 Periods)**

Creating Editable Content-Checking Spelling Mistakes-Custom Data Attributes- Client-Side Storage - Drag and Drop Feature - Web Communication–**jQuery** - Fundamentals of jQuery-Call back Functions-jQuery Selectors-jQuery Methods to Access HTML Attributes.

Total Periods:45**EXPERIENTIAL LEARNING**

1. Design a blog layout that include sheader,navigation menu,content area,sidebar. Apply appropriate styling to each section.
2. Develop a java script based quiz that presents MCQs to the user and provides immediate feedback on their answers. Keep track of the score and display the final results at the end.
3. Build a web page that displays and image gallery.Each image should be a click able link that opens the image in a large rview when clicked.

(Note:It's an indicative one.The course instructor may change the activities and the same shall be reflected in course handout.)

Course Code	Course Title	L	T	P	S	C
22SS101706	WOMEN EMPOWERMENT	3	-	-	-	3

Pre-Requisite -

Anti-Requisite -

Co-Requisite -

COURSE DESCRIPTION: Concept & Framework, Status of Women, Women's Right to Work, International Women's Decade, and Women Entrepreneurship.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- CO1** Demonstrate the knowledge of the characteristics and achievements of empowered women and women's empowerment techniques by analyzing women's legal and political status.
- CO2** Apply the knowledge of women's rights by analyzing various societal issues and obstacles in different fields, including science and technology.
- CO3** Demonstrate the knowledge of the significance of women's participation in policy debates, National conferences, and common forums for equality and development by identifying and analyzing issues.
- CO4** Analyze the concept of women's entrepreneurship, government schemes, and entrepreneurial challenges and opportunities.

CO-PO Mapping Table

Course Correlation Mapping	3	1	-	-	1	3	-	1	-	3	2	-

Correlation Levels: 3: High; 2: Medium; 1: Low

COURSE CONTENT

Module 1: CONCEPT & FRAMEWORK

(09 Periods)

Introduction – Empowered Women's Characteristics – Achievements of Women's Empowerment
Concept of Empowerment: Meaning & Concept – Generalizations about Empowerment – Empowerment Propositions – Choices women can make for empowerment
 – Women's participation in decision making, development process & in Governance.
Framework for Empowerment – Five levels of equality – Tenets of Empowerment – Elements – Phases and aspects – Techniques – Categories and Models – Approaches.

Module2: STATUS OF WOMEN**(09 Periods)**

Legal Status:Present Scenario–Call for Social Change–Significant Trends–Legal&Schemes –Personal Law–Joint Family –Criminal Law–Shift to wardsDowry –

Deterrent Punishment–Criminal Law(IIAmendment)–Discrimination in Employment. Political Status:Present Scenario –Political Participation &its Nature Socio-economic Characteristics –Political Mobilization:Mass Media–Campaign Exposure–Group Orientation–Awareness of issues and participation–Progress&Future Thrust.

Module3: WOMEN’S RIGHT TO WORK**(09 Periods)**

Introduction–Present Scenario–Changesin Policy&Programme –National Plan of Action– Women’s Cells and Bureau–Increase in the work participation rate– Discrimination in the labour market–Women in unorganized sector–Issues and Obstacles–Women in Education–Women in Science &Technology–CaseStudy: Linking Education to Women’s Access to resources.

Module4: WOMEN’S PARTICIPATORY DEVELOPMENT**(09 Periods)**

Dynamics of social change–conscious participation–Information Explosion–Organized Articulation–National Conference –Common Forums–Participatory Development– New Issues Identified–Role of other Institutions.

Module5: WOMEN ENTREPRENEURSHIP**(09 Periods)**

Introduction–Definition–Concept–Traits of women Entrepreneurs–Role of Women Entrepreneurs in India–Reasons for Women Entrepreneurship–Government schemes &Financial Institutions to develop Women Entrepreneurs–Key policy recommendations – Project Planning–Suggestions and measures to strengthen women entrepreneurship – Growth&Future challenges–Training and Opportunities–CaseStudy:Training Women as Hand–pump Mechanics–CaseStudy:Literacy for Empowering Crafts women

Total Periods:45**EXPERIENTIAL LEARNING**

1. Prepare poster presentationon “impact of women's self-help groups on their empowerment and socio-economic development.”
2. Prepare a comparative analysis chart on the status of women in various countries.
3. Prepare a presentation on women and cultural responsibilities in different societies.
4. Prepare a presentation on the women of the past,present and future in terms of responsibilities and duties.
5. Prepare a presentation on the great women entrepreneurs of India.

(Note:It’s an indicative one.Course Instructor may change activities and shall be reflected in course Handout)
